INDEX.

(Each Section is paged separately.)

SECTION I.

VITAL STATISTICS.

General Population.

	Pages.
Registration Districts and Circles, Number of	1
Do. Divisions, Areas, and the Enumerated Population	2—3
Dates of Receipt of the Monthly Registers	4—5

BIRTHS.

Births, Total number of	6
Do. Proportion of Male to Female from 1871 to 1874, inclusive, by Sexes ...	6
Do. Rate per 1,000 from 1871 to 1874	6
Do. Rate is grossly incorrect	6
Do. computed rate	6—7
Comparison of Birth Rates and Death Rates from 1871 to 1874, inclusive ...	8
Districts in which Birth Rate was found to exceed 25 per 1,000	8
Births from 1871 to 1874, inclusive, by Districts and by Sexes	9
Do. do. do. by Months and Quarters	10
Excess of Births over Deaths and *vice versâ*	12—13
Births by Districts, by Months, and by Sexes for 1874	14—15

DEATHS.

Deaths, Total of, from 1865 to 1874	16
Do. Ratios of, from "All Causes," from 1866 to 1872	16
Do. „ compared with 1873 by Districts	17
Do. Total of, for 1874	18
Do. Percentage of Females to Males from 1871 to 1874	18
Do. Ratios by Divisions	18
Proportion of "Still-born" to total of Births	19
Deaths by Ages for 1874	19
Do. by Sexes	19
Do. Ratio *per mille* at different periods of life	20
Do. by Months, Quarters, and Seasons	21
Do. Daily Proportion of, from Fever	22
Do. from specified causes by Seasons	22
Do. do. compared with 1873	22
Do. classified according to Caste	23
Birth and Death Rate compared with London	23
Changes in the new Standard Forms	23
Summary of Deaths from 1866 to 1874	24—25
Five Statements or the Summaries of the Standard Forms	25
Statement No. I. showing Population, Area, and the Death Rate, by Districts ...	26
Do. No. II. do. Deaths from "All Causes" in different Months ...	28—29
Do. No. III. do. Deaths from different causes	30—31
Do. No. IV. (*a*) Deaths in different Age periods	32
Do. N.o IV. (*b*) do. do. according to new system	33
Do. No. V. do. by Classes	34—35
Annual Standard Form for 24 Registration Districts, No. I.	A 1
Do. do. do. do. do. No. II.	2— 5
Do. do. do. do. do. No. III.	6—15
Do. do. do. do. do. No. IV.	16—19
Do. do. do. do. do. No. V.	20—23
Do. do. do. do. do. No. VI.	24—28
Do. do. do. do. do. No. VII.	29—33

Annual Standard Form for 24 Registration Districts, No. VIII. ... ... 33—37
Do. do. do. do. do. No. IX. ... ... 38—41
Do. do. do. do. do. No. X. ... ... 42—46

CANTONMENTS.

Cantonments, Enumerated Population of ... ... C 1
Do. Births, from 1871 to 1874, inclusive, by Months and by Sexes ... 1
Boys and Girls, Proportion of 1
Births and "Still-born", Number of 2
Deaths for 1874 3
Division of Deaths by Ages 3
Do. do. by Caste 3
Deaths from Cholera 3
Do. Small-pox 3
Do. Fever ... ... 3—4
Do. Bowel Complaints 4
Do. Accident or Violence 4
Detail of Deaths by Violence 5
Deaths from "All other Causes" by Months 5
Do. Annual Standard Form No. I. 6
Do. do. do. do. No. II. 7
Do. do. do. do. No. III. 8
Do. do. do. do. No. IV. 9
Do. do. do. do. No. V. 9
Do. do. do. do. No. VI. 10
Do. do. do. do. No. VII. 10
Do. do. do. do. No. VIII. 11
Do. do. do. do. No. IX. 11
Do. do. do. do. No. X. 12

JAILS.

Mortuary Statistics ... ... J 1—2
I.—Table showing Sickness and Mortality among Jail Population of the Bombay Presidency 3
II.— Do. do. Sickness and Mortality among Jail Population (Proper). 4
III.— Do. do. Subsidiary Jails... 5
IV.—Comparative Statement of Ratios of Sickness and Mortality among Jail Population 6
V.—Comparative Statement showing General Statistics of Sickness and Mortality in Jail 7
VI.— Do. do. Ratio in which the principal Diseases have contributed to make up the Admission Rate of the year ... 8
VII.— Do. do. Mortality in each Jail, the causes of Deaths and the Ratio... ... 9
VIII.— Do. do. the Detail of Admissions and Deaths of the Jail Population... ... 10
Mortality in Jails from 1865 to 1873 ... ... 12—13

NATIVE TROOPS.

Official Return showing Increase and Decrease ... ... N 1
Invaliding and Death Rates 1
Mean Strength and Average Daily Sickness 1
Maximum and Minimum Ratios 1
Comparative Health, Value of Station 2
Do. Ratios for different Arms of the Service... 2
Healthiest and Unhealthiest Regiments of Cavalry 2
Do. do. do. Infantry 2
Deaths in Hospital 2
Scurvy 2
Statement showing Increase and Decrease in the Native Army 3
Do. do. Sickness and Mortality among Native Troops 3
Table I.—Showing Sickness and Mortality ... ... 4—5
Do. II.— Do. do. do. Presidency Division ... ... 6—7

Do. VI.— Do. do. Aden Brigade ... ... 14—15
Do. VII.— Do. do. Marching ... ... 16—17
Do. VIII.—Comparative Statement of Ratios of Sickness and Mortality ... 18
Do. IX.—Showing the Daily Average Sick Rate 19
Do. X.— Do. Ratio in which the Chief Diseases have contributed to make up the Admission Rate of each Station ... 20
Do. XI.— Do. Mortality in each Station, the Causes of Deaths, and the Ratio of Deaths to Strength 21
Do. XII.— Do. the Prevalence of Cholera 22
Do. XIII.— Do. do. of Fever 23
Do. XIV.—Abstract of the Return showing Admissions, Deaths, and Invaliding of each Regiment for the year of 1873 ... ... 24—25

SECTION II.

HISTORY OF CHIEF DISEASES.

CHOLERA.

Cholera—Mortality from, by Districts ... ... H 1—3
Do. Contrasted by Months, by Seasons, and by Quarters... 4
Do. Ratios of Deaths from 1866 to 1872, inclusive 5
Do. Ratio of Attacks to Deaths from 1871 to 1874, inclusive 6
Do. Statement appended to Map 7
Do. Supplementary Statements illustrating Distribution, &c. 8
Do. Do. do. by Months 9
Do. Map ... ...

SMALL-POX.

Small-pox—Deaths by Districts and by Months for 1874 ... ... 10—11
Do. Deaths contrasted by Districts... 12
Do. Ratios of Deaths from 1866 to 1872, inclusive 13
Do. Deaths contrasted by Months, by Quarters, and by Seasons ... 14

FEVER.

Fever—Ratios of Deaths from 1866 to 1872 15
Do. Percentage of Fever Deaths to Total Deaths... 15
Do. Deaths compared with other specified causes... 15
Do. do. do. by Districts and by Months, by Quarters, and by Seasons.. 18—19

BOWEL COMPLAINTS.

Bowel Complaints—Ratios of Deaths from 1866 to 1872, inclusive 20
Do. Deaths by Districts and by Months for 1874 ... ... 22—23
Do. do. compared with 1873 by Districts 24
Do. do. do. by Months, Quarters, and Seasons 25

ACCIDENT OR VIOLENCE.

Accident or Violence—Ratios of Deaths from 1866 to 1872, inclusive 26
Do. Deaths by Districts and by Months for 1874 ... ... 28—29
Do. do. compared with 1873 by Districts 30
Do. do. do. by Months, by Quarters, and by Seasons 31
Do. do. do. Detail of Deaths 32
Do. do. do. by Months 33
Do. do. do. by Districts for 1874 ... ... 34—35

ALL OTHER CAUSES.

All other Causes—Deaths from 36
Do. do. Ratios of Deaths from 1866 to 1872 36
Do. do. Deaths, by Districts, and by Months for 1874 ... ... 38—39

SECTION III.

METEOROLOGY.

Introductory Remarks	M	2
Return showing Rainfall for 1874 by Months		3— 7
Abstract by Divisions		7
Nasik—Temperature for ten years...		8
Poona—Thermometrical Observations recorded at		9
Belgaum—Meteorological Observation		9
Karwar—Thermometric Observation at		9
Ratnagiri—Minds recorded at		10
Ahmedabad—Results of Observation on the direction of the Wind		11
Deesa—Temperature for the year 1874		12
Rajkot—Thermometric Observations		13
Karachi—Abstract of Meteorological Observations for 1874		12
Indore— Do. do.		13

SECTION IV.

THE FOOD SUPPLY OF THE PEOPLE.

Food Equivalents, by Dr. Lyon	F	2— 4
Table showing Price per Maund of Bajri, Gram, Jowari, Rice, Toor, and Wheat, by Districts and by Months in 1874		5—10

SECTION V.

A RECORD OF PERSONAL PROCEEDINGS.

Visit to Pandharpur	R	2
Remarks on para. 8 of the Memorandum of the Army Sanitary Commission on the Report for 1873		2
Do. on para. 26 do. do. do. do. ...		2

SECTION I.

VITAL STATISTICS.

R 706—v 1

SECTION I.

VITAL STATISTICS.

GENERAL POPULATION.

The subjoined statement shows our Registration Districts and Circles :—

Divisions.	Registration Districts.	Registration Circles.			
		Rural R. C.	Town T. C.	Cantonments Ct.	Total.
Deccan	9	100	24	6	130
Konkan	5	36	10	...	46
Guzerat	5	33	14	1	48
Sind...	5	53	7	...	60
Total...	24	222	55	7	284

2. The Divisions are our geographical divisions and the Districts are the Collectorates. The Rural Circles are the Talukas, the Town Circles are those Towns having 5,000 or more inhabitants, and the Cantonment Circles are those which by numbers are qualified to stand alone. The following table shows, for each District, the area and the population by sexes :—

Divisions.	Nos.	Registration Districts.	Area in Square Miles.	Population.		
				Persons.	Males.	Females.
DECCAN.	1	Khandesh	10,162	1,028,642	530,610	498,032
	2	Nasik...	8,140·20	734,386	376,851	357,535

BIRTHS.

4. In our population of 16,228,774, the births registered for 1874 are 332,808, and for 1873 they were 290,319. Taking them by sexes, there were 174,966 boys and 157,842 girls, so in every 100 births their respective proportions were 53·77 and 46·23, and for every 100 male births, there were 90·21 females. The following are the proportions for the last four years :—

Years.	In every 100 born there were		For every 100 Male Births the Female were
	Males.	Females.	
1871	52·86	47·14	89·18
1872	52·69	47·31	89·80
1873	52·53	47·47	90·35
1874	53·77	46·23	90·21
Mean	52·96	47·04	89·88

5. The four years' average shows that in every 100 children born, 52·96 are boys and 47·04 are girls, and for every 100 boys born, there are 89·88 girls. In the first year, the numbers registered were 252,609, in the second, they were 266,943, in the third, 290,319, and in the fourth, 332,808, so the increase has been progressive : first 14,334, then 23,376, and now 42,489. The average per year has been 26,733, and without a doubt the system is improving. These details are shown in the following table, together with the birth-rates calculated upon the population given :—

Years.	Population.	Total of Births.	Birth Rate per 1,000.
1871	14,153,924	252,609	17·7
1872	15,197,071	266,943	17·6
1873	16,235,611	290,319	17·9
1874	16,228,774	332,808	20·5
Mean	15,453,845	287,670	18·4

6. The mean of the four years is, that in an average yearly population of 15,453,845, there were each year 287,670 births : only 18·4 per 1,000. Now this rate is suspiciously low, and it can be shown that it is grossly incorrect. On the 21st February 1872, there were enumerated 3,463,224 children of 6 years and under, and the numbers over 6, but under 12, were 2,436,074 : between the totals of these two equal periods, the difference is 1,027,150. Now, assuming that throughout these twelve years, the number of births was each year the same, and that the death-rate was constant, the numbers at the close of the second period should have been the same as those for the first period. But they are not. In the first, they are 3,463,224, and in the second, they are 2,436,074 : less in the second by 1,027,150. The average yearly reduction, presumably by death, has been 171,192—a rate of 49·43 per 1,000, and if similar calculations be made for the remaining age periods, it will be found that the general death-rate, for all ages, is 35·57 per 1,000 per annum. With the sexennial death-rate of 49·43 per 1,000,

or say 50, let us suppose that the births were each year 1,000. At the end of the first year the return would be—

1,000 births.
50 deaths.

950 increase.

7. Next year the 1,000 births would raise the total to 1,950, and 97·5 deaths would reduce it to 1852·5, and continuing this, it will be found that, at the end of the 6th year, the collective increase will be 5,033. If then, in six years, we get by births an increase of 5,033 (1,000 per annum, *minus* deaths), what must betheir number to give us 3,463,224, our actual numbers under six years? It was shown in the Census Report, that they must be 688,069, and this is the approximate number on our total population of 16,228,774. The numbers over 60 years of age are only 2·7 per cent. of the total population; so if we assume that all of them are under 64, the few who are over this limit will not materially affect the calculations. Let us suppose, too, that the annual births are 1,000, the general death-rate being 35·57, or say 35·6, then

Vol. II., p. 74.

at the end of the 1st year $\frac{35·6}{1,000}$ of 1,000 (=35·6) will die, and the survivors will be 964·4,

at the end of the 2nd year $\frac{35·6}{1,000}$ of 964·4 (=34·3) will die, and the survivors will be 930·1, and

at the end of the 64th year there would die 3·6, and the survivors would be 98·01.

In the 64 years there would have been 64,000 births, and the deaths amongst them would have been 39,585, leaving 24,415 as permanent increase.

If, then, in 64 years, with 1,000 births every year, *minus* deaths, the survivors are 24,415, how many must there be to give us in the same period, our population of 16,228,774? or it may be put thus:—If B represent the required annual number of births, then

Surviving Population.		Surviving Population.		Annual Births.		
24,415	:	16,228,774	::	1,000	:	B.

$$B = \frac{16,228,774,000}{24,415} = 664,705 \text{ annual births.}$$

This number is less by 23,364 than that obtained by the same method for the six years' period, but in neither case have decimals been included, and for the shorter time, the death-rate was taken as 50, instead of 49·43. Now, dividing the population by age periods, there is a decrease in numbers for each period from birth onwards (obviously those between 20 and 30 outnumber those between 50 and 60), and this being so, the total population returned as under six years, should be less than six times the number of births for one year. This is actually the case: our annual births (664,705) multiplied by 6, are 3,988,230, and our total population under six is returned as 3,463,224: less by 525,006.

Taking the annual births at 664,705, the birth-rate is thus deduced:—

Population.		Population.		Births.		Required Rate.
16,228,774	:	1,000	::	664,705	:	R

$$R = \frac{664,705,000}{16,228,774} = 40·96 \text{ birth-rate per 1,000 per annum.}$$

In the Census Report it is given as 41·05: higher by 0·09 only.

We now get some idea as to what are our shortcomings. Instead of a birth-rate of 18 per 1,000 per annum, it should be 40 (it is 35 for England), and instead of 285,670 births (the mean for four years), there should be 664,705. Thus whilst 285,670 are returned, no less than 379,035 escape registry. In other words, out of every 100 births, only 43 are recorded, and 57 are never reported !

Against this computed birth-rate of 40·96 per 1,000 per annum, there is a computed death-rate of 35·57, and the difference (5·39) represents the natural increase. Comparing the two sets of rates as deduced from the returns, it is seen that in 1874, for the first time, the birth-rate is the greater, and for that year the excess of 3·3 per 1,000 represents a reported increase of 54,156.

Year.	Rate per 1,000.		Increase.	Decrease.
	Births.	Deaths.		
1871	17·7	19·7	...	2·0
1872	17·6	23·4	...	5·8
1873	17·9	17·9	...	...
1874	20·5	17·2	3·3	...
Mean ...	18·42	19·55	...	1·13

In England the births to the deaths are as 3 to 2, and with us, in 1874, they are as 3 to 2·5. In the following table there are shown those districts in which the birth-rate was found to exceed 25 per 1,000, and by way of contrast, there are shown the computed rates and the returned, and computed death-rates. In the former paragraph it was said that the computed birth-rate for our districts generally was more than the death-rate by 5·39, and for the seven districts named it exceeds it by 5·64 :—

Districts.	Birth Rate per 1,000.		Death Rate per 1,000.	
	Returned.	Computed.	Returned.	Computed.
Kanara	31·49	39·95	27·24	30·12
Ahmadnagar	30·14	41·06	17·84	36·47
Dharwar	28·71	39·98	22·11	33·58
Kaladgi	28·83	41·66	16·45	36·52
Satara	27·81	38·28	17·60	32·69
Belgaum	26·53	40·30	20·96	35·09
Nasik	25·36	43·19	16·57	38·19
Means	28·41	40·30	19·82	34·66

Hitherto the maximum and minimum birth-rates have been in DHARWAR and THAR and PARKAR respectively, but in 1874, the highest is in KANARA. It is found that during the past four years, in every registration district, with the single exception of KANARA in 1874, the male births have always exceeded the female.

STATEMENT showing, for the undermentioned Districts, the number of BIRTHS *registered, and their proportion to the total Population, from* 1871 *to* 1874, *inclusive.*

* These are enumerated populations.

† This includes the population of Jambughora, a Native State.

11. The greatest number of births in any one month was 31,892 in August, and the least was 21,405 in February, but for the period of four years the maximum is in July, the minimum remaining in February. In every month of each year, without one single exception, the male births have everywhere exceeded the female.

STATEMENT showing, for the BOMBAY PRESIDENCY, *the Number of* BIRTHS *registered in each Month of the Year, from* 1871 *to* 1874, *both years inclusive.*

13. In 1874 throughout the entire DECCAN DIVISION, the births everywhere exceed the deaths. In the KONKAN it would be the same, were it not for BOMBAY CITY, the one place of all others in which the registration agency is supposed to be the most efficient. Here the deaths recorded exceed the births registered by 2,473. In GUZERAT the deaths outnumber the births, except in the PANCH MAHALS, where the latter exceed them by 804. In SIND the deaths exceed the births by 5,250, but for the PRESIDENCY generally the births exceed the deaths by 54,156. The following table shows these details for each DISTRICT of each DIVISION :—

DEATHS.

15. The mortality from specified causes is treated under Section II., so now the total number of deaths only is dealt with. The following table shows, from 1865 to 1874, the numbers living, the deaths per annum, and the death-rate per 1,000 :—

Years.	Population.	Deaths Registered.	Out of every 1,000 living there died
1865	11,454,958	265,019	23·1
1866	12,428,336	185,958	14·9
1867	13,243,928	162,996	12·3
1868	12,792,743	185,230	14·5
1869	13,901,863	284,838	20·5
1870	13,523,873	219,758	16·3
1871	14,153,924	279,726	19·7
1872	15,197,071	355,960	23·4
1873*	†16,235,611	290,972	17·9
1874	16,228,774	278,652	17·2

* From this year we have an enumerated Population.
† This includes the population of Jambughora, a Native State, in Panch Mahals.

16. The actual annual mortality from 1866 to 1872 was shown in the Report for 1873, and there are now given for the same years and for each division and district, the annual and average death-rates :—

STATEMENT showing, for the Bombay Presidency Registration Districts, the Ratio per 1,000 *of Total Mortality from all Causes, calculated on the total estimated Population for each year, from* 1866 *to* 1872, *both years inclusive.*

Division.	Registration Districts.	1866.	1867.	1868.	1869.	1870.	1871.	1872.	Average Death Rate for 7 years.

* Prior to 1869 Nasik was a portion of the Khandesh and Ahmadnagar Collectorates.
† Prior to 1869 Kolaba was a portion of the Tanna Collectorate.
‡ Number of deaths taken from Health Officer's Reports from 1866 to 1870, inclusive.
§ Prior to 1868 Broach was a portion of the Surat Collectorate.
‖ For 1872 the Shikarpur Returns were too imperfect to be published.

17. Comparing the death-rate for 1874 with that for 1873, it will be seen that, for the former years, it is slightly higher in the DECCAN, but lower in the other DIVISIONS. These rates, and those for preceding years, are subjoined :—

CONTRASTED STATEMENT showing, for the Bombay Presidency Registration Districts, the Rates per 1,000 *of Total Mortality calculated on the Enumerated Population of* 1872.

Division.	Registration Districts.	Death-rate per 1,000.		Mean Rate of Deaths per 1,000 for previous five years.

18. The next table is an abstract of Annual Form No. 1, and it gives the Population, the Deaths, and the Death-rate per 1,000 for our Rural, Town, and Cantonment Circles.

TABLE showing, for the Bombay Presidency, the Mortality in Rural, Town, and Cantonment Circles, from 1871 *to* 1874, *both years inclusive.*

Years.	Rural Circles.			Town Circles.			Cantonment Circles.		
	Population.	Deaths.	Ratio per mille.	Population.	Deaths.	Ratio per mille.	Population.	Deaths.	Ratio per mille.
1871...	12,228,547	235,095	19·2	1,054,943	27,260	25·8	53,872	718	13·3
1872...	13,423,388	316,442	23·6	1,726,812	49,514	28·7	46,871	1,101	23·5
1873...	13,708,794	232,005	16·9	2,482,037	58,660	23·4	44,780	907	20·3
1874...	14,337,872	234,404	16·3	1,846,122	43,330	23·5	44,780	918	20·5

19. For 1874 the deaths registered, exclusive of "born dead," were 278,652, and in 1873 they were 290,972, so for this year they are less by 12,320. The excess of Births over Deaths was 54,156. From the actual figures the death-rate is 17·17 per 1,000: in 1873 it was 17·9, and the mean for eight years 18·2. It has already been shown that these rates are grossly incorrect.

20. Of the 278,652 deaths registered, there were 148,591 of males and 130,061 of females, a proportion of 53·32 to 46·68. Similar proportions for the living are respectively 52·27 to 47·73. Of males dying to males living the ratio per 1,000 was 17·52 and of females dying to females living it was 16·79. For every 100 males dying there died 87·53 females, and for every 100 males living there are now alive 91·32 females. The following table shows the proportion of male and female deaths for 1874, and the three previous years. From 1871 we get, from all our districts, returns according to sexes.

STATEMENT showing, for the Bombay Presidency, the Number of Deaths, their Percentages, and Female Deaths to every 100 *Males, from* 1871 *to* 1874, *both years inclusive.*

Year.	Total Deaths.		Per cent. of Total Deaths.		Females died to every 100 Males.
	Males.	Females.	Males.	Females.	
1871	143,220	119,853	54·40	45·60	83·68
1872	196,103	170,954	53·43	46·57	87·18
1873	157,040	133,932	53·97	46·03	85·29
1874	148,591	130,061	53·32	46·68	87·53

21. The maximum mortality for the year (21,845) was in DHARWAR, and the minimum (925) in the UPPER SIND FRONTIER DISTRICT. Taking the death-rate per 1,000 upon the population of the district, the highest (27·24) is in KANARA and the lowest (6·22) in THAR and PARKAR. For the DIVISIONS the highest ratio is in GUZERAT and the lowest in SIND.

Divisions.	Enumerated Population.	Total Number of Deaths.	Ratio of Deaths per 1,000 of Population.
Deccan	7,966,061	140,511	17·64
Konkan	3,259,776	57,037	17·50
Guzerat	2,810,522	60,751	21·62
Sind	2,192,415	20,353	9·28
Total	16,228,774	278,652	17·17

22. The "born dead" for the year number 6,147, and in 1873 they were 6,075. Their numbers for each district are shown at page 30 of this Report. For the last four years in every 1,000 births, the born dead have averaged 20·50.

Statement No. IV. (*a.*)

Years.	Total Number of Births.	Number of Still-born.	Out of every 1,000 Births there were Still-born.
1871	252,609	* 5,660	22·41
1872	266,943	5,389	20·19
1873	290,319	6,075	20·93
1874	332,808	6,147	18·47
Means ...	285,669	5,817	20·50

* In the Annual Report for 1871 the number of "Born Dead" for the City of Bombay was not shown: so the number for that year (658) is taken from the Health Officer's Report for 1871.

23. The next table shows the deaths at the different age periods :—

Numbers living.		Deaths.	Ratio Per 1,000 to living.
Not exceeding 1 year	582,671	49,945	85·72
From 1 to 6 years	2,880,553	57,219	19·86
„ 6 to 12 „	2,436,074	13,746	5·64
„ 12 to 20 „	2,360,426	13,998	5·93
„ 20 to 30 „	3,153,012	27,159	8·61
„ 30 to 40 „	2,206,398	26,257	11·90
„ 40 to 50 „	1,364,899	26,239	19·22
„ 50 to 60 „	791,808	29,114	36·77
Exceeding 60 „	452,933	34,975	77·22
Total... ...	16,228,774	278,652	17·17

24. Age for age out of every 1,000 children born, 85·72 die before completing their *first* year, and out of every 100 deaths 18 are those of children under one year. This however cannot be accepted, for in England the rate is 25 per 100. The mortality under 6 years is rather more than *one-third* of the whole, and from 6 to 20 it decreases: from 20 to 30 it is nearly doubled: from 30 to 50 there is no very marked difference, but after 50 it again increases. After 60 our record of age is lost, but the death-rate is 77·22 per 1,000. Between 12 and 30 the mortality is higher amongst females, but at all other periods, except after 60 it is less: after 60 it is very slightly higher.

25. The following table shows the deaths at different age periods for each sex:—

Sex.	Not exceeding 1 year.	1 to 6.	6 to 12.	12 to 20.	20 to 30	30 to 40.	40 to 50.	50 to 60.	Exceeding 60.	Total.
Males	27,397	29,622	7,357	6,615	13,170	14,662	15,802	16,490	17,476	148,591
Females	22,548	27,597	6,389	7,383	13,989	11,595	10,437	12,624	17,499	130,061
Total ...	49,945	57,219	13,746	13,998	27,159	26,257	26,239	29,114	34,975	278,652

26. These deaths again are this year classed under the subjoined heads, and compared with those for 1873 :—

1. Infants unable to walk (under 1 year).

2. Boys and Girls (2 to 12 inclusive). The 12th was the year adopted by the Statistical Committee as the limit between childhood and adult age, and it was so used in the Census Tables.

3. Adults (13 to 50 inclusive).

4. Old people (upwards of 50).

Years.	Total Number of Deaths.	Infants (Children unable to walk.)		Boys and Girls.		Adults.		Old People.	
		Total of Deaths.	Rate per 1,000 to Total Deaths.	Total of Deaths.	Rate per 1,000 to Total Deaths.	Total of Deaths.	Rate per 1000 to Total Deaths.	Total of Deaths.	Rate per 1,000 to Total Deaths.
1873	284,897	45,473	159·61	71,622	251·40	71,193	249·89	96,609	339·10
1874	278,652	49,945	179·24	70,965	254·67	67,413	242·29	90,329	323·80

27. The next table shows the total of deaths and the total for each separate age period, together with the proportion per 1,000 for each, and the fractional equivalent :—

Ages.	Total Deaths.	Total Deaths at the Ages specified.	Out of every 1,000 there died.	Fractional part of Total Mortality.
Under 1 year	278,652	49,945	180	$\frac{1}{6}$
1 to 6 years		57,219	205	$\frac{1}{5}$
6 to 12 „		13,746	49	$\frac{1}{20}$
12 to 20 „		13,998	50	$\frac{1}{20}$

Total ...	*219,727	279,726	†367,057	290,972	278,652	1,436,134

* There is an error of 31 deaths in the Report for 1870. The figure ought to be 219,758.

† The deaths in Shikarpur Collectorate, numbering 11,097, are shown here, but they were not included in other Forms, as the Returns were too imperfect to be published.

29. For the period specified the mortality is lowest in February and highest in November, the respective extremes being 103,302 and 135,276. For 1874 the figures are 19,999 and 26,832. The total mortality for the year and the monthly rates are those here given :—

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total.
Total of Deaths ...	24,643	19,999	22,742	20,970	21,015	21,455	22,744	24,410	22,240	25,398	26,832	26,204	278,652
Ratio per 1,000 on Total Population...	1·52	1·23	1·40	1·29	1·29	1·33	1·40	1·50	1·37	1·57	1·65	1·62	17·17

30. By quarters the death-rate is for the first 4·15 per 1,000, for the second 3·91, for the third 4·28, and for the fourth 4·83. These details are thus tabulated :—

Quarters.	Total Number of Deaths.	Ratio per 1,000 on Total Population.
1st Quarter ending March	67,384	4·15
2nd do. do. June...	63,440	3·91
3rd do. do. September	69,394	4·28
4th do. do. December	78,434	4·83

31. By seasons, the deaths are thus distributed :—

Months.	Seasons.	No. of Deaths.
December, January, February, March	Cold	93,588
April, May	Hot and dry	41,985
June, July, August, September	Rainy	90,849
October, November	Hot and damp	52,230

32. The next table shows, for each season of 1873 and 1874, the daily proportion of total deaths, and of deaths from Fevers :—

Years.	Cold Season. December, January, February, March, 122 Days.		Hot and Dry. April, May, 61 Days.		Rainy. June, July, August, September, 122 Days		Hot and Damp. October, November, 61 Days.	
	Daily Proportion of Total Deaths.	Daily Proportion of Fever Deaths.	Daily Proportion of Total Deaths.	Daily Proportion of Fever Deaths.	Daily Proportion of Total Deaths.	Daily Proportion of Fever Deaths.	Daily Proportion of Total Deaths.	Daily Proportion of Fever Deaths.
1873	825	553	725	453	759	464	877	599
1874	767	529	688	447	745	454	856	598
Means... ...	796	541	706	450	752	459	866	598

33. By specified causes and by seasons, they are as follows :—

Diseases.	Cold.					Hot and Dry.			Rainy.					Hot and Damp.			Total of the Year.
	December.	January.	February.	March.	Total.	April.	May.	Total.	June.	July.	August.	September.	Total.	October.	November.	Total.

35. The chief features for the year are the almost utter absence of Cholera (a total of 37 cases), great immunity from Small-pox, increased prevalence of Fevers and Bowel Complaints, and low numbers for "All Other Causes." The next table shows, by caste or class, the numbers living, the deaths, and the death-rate per 1,000—

Divisions by Class or Caste.	Number by Census of February 21st, 1872.	Deaths.	Ratio of Deaths per 1,000 of Population.
Christians	106,072	1,846	17·40
Mussulmans	2,842,762	35,733	12·57
Hindus	13,110,464	237,131	18·09
Other Classes	169,476	3,942	23·26
Total ...	16,228,774	278,652	17·17

36. It is calculated that, in London, there is a birth every 5 minutes and a death every 8 minutes, but for the Presidency the respective periods are 1 minute 35 seconds and 1 minute 53 seconds.

37. In the new series of forms ordered by the Government of India, and shown for the first time in this Report, there are several changes which may thus be detailed :—

Form No. I.—The Districts collectively to be shown, and not, as formerly, each Circle. The areas to be given in square miles instead of square acres. No abstract to be shown.

Form No. II.— All the Town Circles of each District to be shown separately and the Rural Circles to be shown collectively. Distinction of sex not to be shown for each month, but only for the year. Monthly ratios to be shown, and detailed abstract for Circles.

Form No. III.—"Born Dead" to be omitted. Rural Circles to be shown collectively.

Form No. IV.—The age periods are altered as follows :—

Infants unable to walk.
Boys.
Girls.
Adults.
Old people.

Form No. V.—No change.

Form No. VI.—Ratio of deaths per 1,000 to be shown. No distinction of sex, except in the column for collective totals.

Form No. VII.—Ratio of deaths per 1,000 amongst Infants—Boys and Girls—cannot be filled in for this year.
Ratio of total deaths per 1,000 to be shown.

Form No. VIII.—Distinction of sex not to be shown, except in the column for collective totals.
Ratios per 1,000 to be shown.

Form No. IX.—Similar alterations.

Form No. X.—A new form—the column for marriage cannot be filled in.

38. The subjoined tables give the mortality for each of the eight registration years, and the Summary shows us in what direction we should work :—

39. The following five statements are the summaries of the Standard Forms, and they are here given. They show the following points for the Registration Districts and Divisions :—

I.—Population, area in square miles, average population per square mile, total of deaths, death-rate per mille, and the mean death-rate during previous five years, with Abstracts.

II.—Deaths from " all Causes " in different months.

III.—Deaths from different causes, and the rate per 1,000.

IV. (*a*).—Deaths in different age periods.

IV (*b*).— Do. do. do. according to new system.

V..—Deaths by classes.

Statement No. I.—DEATHS *registered in the different* REGISTRATION DISTRICTS *of the* BOMBAY PRESIDENCY *during the Year* 1874.

CANTONMENTS.

The subjoined table shows the Cantonments dealt with, and their enumerated populations, male and female :—

Cantonments.	Enumerated Population.		
	Male.	Female.	Total.
Aden	11,673	7,616	19,289
Baroda	1,339	1,112	2,451
Bhooj	468	523	991
Disa	5,010	4,325	9,335.
Kolhapur	345	301	646
Mehidpur	97	58	155
Mhow	13,043	9,749	22,792
Nimach	6,961	4,826	11,787
Nasirabad	10,263	8,073	18,336
Rajkot	651	762	1,413
Total...	49,850	37,345	87,195

2. It will be seen that in a collective total of 87,195 persons, there are 49,850 males and 37,345 females : a proportion of 57·17 of the former to 42·83 of the latter ; in other words, for every 100 males there are 75 females.

Births.

3. The Cantonment Birth Tables commence from 1871, when 1,958 were registered in a population of 67,253 : a proportion of 28·8 per 1,000. In 1872 there were 2,011, the population being 70,237 : a proportion of 28·6 per 1,000. In 1873 there were 2,106, the population being 71,024 : a proportion of 29·7 per 1,000. For 1874 the numbers registered are 2,328, the population being 87,195, and the proportion per thousand 26·69. The following table shows the relative frequency of births in each month :—

Months.	1871.			1872.			1873.			1874.

Total...			1,958	1,066	945	2,011	1,108	998	2,106	1,285	1,043	2,328

4. For 1874 another form (No. X.) has been added to the regular series, showing the details of births in each Cantonment ; and the increase or decrease of births over deaths, or of deaths over births.

5. Of the 2,328 births registered during 1874, there were 1,285 boys and 1,043 girls : a proportion of 55·2 to 44·8 ; in other words, for every 100 girls born there were born 123 boys. Besides these 2,328 births, there were 141

still-born (79 males and 62 females). The following table shows the number of births and of still-born during each month of 1874 :—

STATEMENT SHOWING THE NUMBER OF BIRTHS AND OF STILL-BORN IN THE CANTONMENTS NOT INCLUDED IN THE REGISTRATION DISTRICTS OF THE BOMBAY PRESIDENCY, DURING EACH MONTH OF THE YEAR 1874.

Rajkot	4	3	7	..	..	..	6	6	12	1	..	1	41	39	83	6	4	10
Total ...	154	112	266	5	4	9	135	126	261	4	1	5	1285	1043	2328	79	62	141

6. The total of deaths for 1874 is 2,0421 just 141 more than for last year. There were 1,172 of males and 870 of females: a proportion of 100 to 74·23. Of males dying to males living, the ratio per 1,000 was 23·51, and of females dying to females living it was 23·29. For both sexes it was 23·22.

Deaths.

7. In Annual Statement No. IV. the deaths at different ages have thus been classed—All under 1 year are "*Infants*"; from 1 to 12 inclusive are "*Boys and Girls*"; from 13 to 50 inclusive are "*Adults*"; all above 50 are "*Old People.*"

8. These are detailed in the following table, and contrasted with similar details for 1873 :—

Years.	Infants (children unable to walk).		Boys.	Girls.	Adults.		Old People.		Total.		
	Male.	Female.			Male.	Female.	Male.	Female.	Male.	Female.	Total.
1873 ...	269	240	181	171	340	232	179	157	969	800	1,769*
1874 ...	332	276	212	150	432	308	196	136	1,172	870	2,042*

* Exclusive of "Still-born."

From the above table it will be seen that in the Cantonments named the *Infant* mortality is a little less than one-third of the total mortality.

9. The next table shows the mortality by class, or caste, and the ratio per 1,000 for each—

	Christians.	Mussalmans.	Hindus.	Other Classes.	Total.
Population	1,736	33,839	41,415	10,205	87,195
Deaths	19	781	905	337	2,042
Ratio of deaths per 1,000 of population ...	10·94	23·08	21·85	33·02	23·22

10. The deaths from special diseases may thus be summarised—

11. From *Cholera* there was only 1 (a male) at Baroda, in October.

12. From *Small-pox* there were 48, males 21 females 27. There were 4 in Aden, 1 in Mhow, and 43 in Nasirabad. By months they occurred thus—

January ...	...34
February ...	...10
March ...	... 2
April ...	... 1
May ...	... 1
Total	...48

13. From *Fevers* there were 889 deaths against 867 in 1873. There were 510 of males and 379 of females: a proportion of 100 to 74·31. The maximum mortality was (99) in October and the minimum (46) in June. As mortality from fevers always bears a high percentage to that from "Other causes," it is here contrasted:—

Cantonments.	Total Deaths from all Causes.	Deaths from "Fever."	Percentage of latter to former in	
			1874.	1873.
Aden	457	214	46·8	14·3
Baroda	52	20	38·5	40·3
Bhooj	24	7	25·0	22·2
Disa	128	68	53·1	57·4
Kolhapur	28	5	17·9	15·4
Mehidpur	1	.....	.....	.....
Mhow	588	225	38·3	38·9
Nimach	548	105	70·9	65·0
Nasirabad	584	232	39·7	47·0
Rajkot	32	13	40·6	6·1
Total...	2,042	889	43·5	45·6

14. From *Bowel Complaints* there were 169 deaths: 102 of males and 67 of females (100 to 65·7). No less than 80 of the 169 were at Aden and 43 were at Mhow.

15. From *Accident or Violence* there were 32 deaths, of males 21 and of females 11. Under the 4 headings of the standard form they appear thus—

	Male.	Female.	Total.
By Suicide	5	2	7
„ Wounding...	1	...	1
„ Accident	10	3	13
„ Snake-bite or killed by wild beasts	5	6	11
Total.....	21	11	32

16. Of all the deaths by *accident or violence*, every detail for each month is here given :—

* Population by Census of May 1st, 1872.

JAILS.

The mortuary statistics for Jails are given separately, and they show that during 1874 the average strength of prisoners in confinement was—

In Jails Proper	6,778	against	6,452	in 1873.
In Subsidiary Jails, &c.....	2,705	„	2,609	„
	9,483	„	9,061	
	9,061			
	+422			

The average number of daily sick was—

In Jails Proper	200·5	against	169·9	in 1873.
In Subsidiary Jails, &c.....	109·8	„	70·7	„
	310·3	„	240·6	„
	240·6			
	+69·7			

The ratios per mille of daily sick to average strength were—

In Jails Proper	29·6	against	26·3	in 1873.
In Subsidiary Jails, &c.....	40·6	„	27·1	„
In all Jails	32·7	„	26·6	„

The admissions into Hospital, and the ratios of the same per mille of average strength were—

	1874.		1873.	
	Admissions.	Ratios.	Admissions.	Ratios.
In Jails Proper	5,537	816·9	4,872	755·1
In Subsidiary Jails, &c.	3,575	1,321·6	2,289	877·3
In all Jails	9,112	960·9	7,161	790·3

Taking admissions by months, the totals show the following ratios:—

JAILS PROPER.

In October—Maximum	103·2	per mille against	74·2 in September	1873.
In February—Minimum	42·5	„ „ „	53·8 in March	„

SUBSIDIARY JAILS.

In November—Maximum ...	169·7	per mille against	95·4 in January	1873.
In February—Minimum	61·7	„ „ „	60·9 in December	„

ALL JAILS.

In October—Maximum	121·3	per mille against	78·6 in July	1873.
In February—Minimum	47·9	„ „ „	57·4 in February	„

Fever was in excess at the Shikarpur Jail Proper in October, and at Yerrowda Subsidiary Jail in December.

For all Jails with an average strength over 50, the maximum and minimum ratios of daily sick per mille of average strength :—

JAILS PROPER.

Sawantwari—Maximum	77·6 against	98·7 at Sawantwari in	1873.
Ahmadnagar—Minimum	9·1 „	4·8 at Kolhapur in	„

SUBSIDIARY JAILS.

Amarkot—Maximum.....	68·5 against	44·7 at Bakkar in	1873.
Karwar—Minimum	18·5 „	12·3 at Karwar in	„

Deaths. The deaths and their ratios per mille of average strength were :—

		Ratio per Mille.		Ratio per Mille.	
In Jails Proper	159	23·5 against	211	32·7 in	1873.
In Subsidiary Jails, &c.	38	14·0 „	55	21·1 in	„
In all Jails	197	20·5 „	266	29·4 in	„

Death-rates. Excluding Jails with an average strength under 50, the maximum and minimum death-rates were :—

JAILS PROPER.

Haidarabad—Maximum ...	73·8 against	106·7 per mille at Sawantwari in	1873.
Kaladgi—Minimum	8·6 „	9·7 „ at Ahmadnagar in	„

SUBSIDIARY JAILS.

Amarkot—Maximum	44·9 against	90·3 per mille at Amarkot in	1873.
Yerrowda—Minimum	7·6 „	6·4 „ at Yerrowda	„

NATIVE TROOPS.

From the Official Return supplied by the Adjutant General (see table at page N 3) the strength of the Native Army was 25,139, and during the year it was increased as follows:—

			25,139
Increase.	By Recruiting	1,544	
	„ Otherwise received	68	1,612
			26,751
	From the gross total there must be deducted on the 31st December 1874 :—		
Decrease.	By Deaths	268	
	„ Invaliding	978	
	„ Summary dismissal, desertion, &c. ...	507	
			1,753
	Strength on the 1st January 1875.....		24,998

Deducting from the gross total of 26,751 the 507 removed by causes other than those pertaining to health, there is a remainder 26,244, and out of this the loss was :—

Invaliding and death rates.

By Invaliding 37·3 against 34·5 per mille in 1873.
„ Deaths 10·2 against 10·0 „ „

The proportion being greater 2·8 per mille by invaliding and 0·2 per mille by deaths.

Mean strength and average daily sick.

From the Monthly Returns the mean strength of men serving with their regiments was 22,758 against 23,096 in 1873. The average number of daily sick was thus :—

835·5 against 868·1 in 1873. The average being
36·7 „ 37·6 per mille in 1873.

Admissions.

The total number of admissions during the year was 26,796 against 28,881 in 1873, the ratios per mille being 1,177·4 against 1,250·5.

Maximum and minimum.

The maximum and minimum of admissions are thus :—

154·4 maximum in October against 170·4 per mille in October 1873.
70·1 minimum in April „ 70·7 „ in March „

Comparative health. Value of stations.

The ratios of daily sick per mille of average strength at the several stations give maximum and minimum thus :—

Burda Chowkey,	Maximum	128·8	against 154·3 per mille in 1873	at Burda Chowkey.
Perim,	Minimum	7·5	„ 17·4 „	„ Maligam.

Comparative ratios for different Arms of the service.

In different Arms of the service the comparative ratios of admissions to strength were—

For Artillery	...	...1,053·6	against 814·7	per mille in 1873.
„ Cavalry	...	...1,204·1	„ 1,254·0	„ „
„ Infantry	...	...1,172·2	„ 1,254·2	„ „
„ Sappers and Miners		... 855·7	„ 1,193·2	„ „

Healthiest and unhealthiest Regiments of Cavalry.

The healthiest Cavalry Regiment was the Poona Horse, quartered at Sirur and Dhulia; the unhealthiest was the 1st Sind Horse, at Jacobabad.

Do. do. Infantry.

Amongst the Native Infantry Regiments the healthiest was the 6th Regiment, at Belgaum and Kaladgi, and the unhealthiest was the 10th Regiment, at Mhow, Mehidpur, Indore, and Augur.

The number of deaths in hospital was 178—7·8 per mille of mean strength (22,758). In 1873 the number was 173—7·4 per mille of mean strength (23,096).

Scurvy.

There are 198 admissions and 2 deaths from scurvy against 283 admissions and 4 deaths in 1873.

STATEMENT SHOWING THE INCREASE AND DECREASE IN THE NATIVE ARMY FROM 1ST JANUARY TO 31ST DECEMBER 1874.

Adjutant General's Office, Poona, 1st January 1875.

Strength on 1st January 1874... ...		25,139

SKETCH MAP

TO ILLUSTRATE THE

DISTRIBUTION OF AND COMPARATIVE MORTALITY

FROM

CHOLERA

in the

DIFFERENT CIRCLES OF MORTUARY REGISTRATION

OF THE PRESIDENCY

During the Year

1874

Scale.—1 Inch to 32 Miles.

N.B. Figures in black ink show the Number of the Registration Circle. These Numbers are given in Column 1 of the "Statement appended to Map".

Figures in red ink show the ratio per 10,000.

The fractional figures indicate the date of first cases in each circle. Thus ½ means the 2nd July.

SECTION II.

HISTORY OF THE CHIEF DISEASES.

CHOLERA.

The total of deaths for the year is 37 only: 24 of males and 13 of females. For 1873 the total was 283. Of the 37 deaths 19 were in Bombay City, 2 were in the Poona Districts, 1 in Kaladgi, 4 in Surat, 1 in Kaira, and 10 in Ahmadabad. They are shown by sexes in the following table, and contrasted with those for 1873:—

Division.	Registration District.	1874.			1873.			Enumerated Population.	Ratio per 1,000 of Population.

* Prior to 1869 Nasik was a portion of the Khandesh and Ahmadnagar Collectorates.

† Prior to 1869 Kolaba was a portion of the Tanna Collectorate.

‡ From Health Officer's Reports from 1866 to 1870, inclusive.

§ Prior to 1868 Broach was a portion of the Surat Collectorate.

‖ For 1872 the Shikarpur Returns were too imperfect to be published.

6. With the Cholera Map there are 3 separate statements: the first gives the places in the order of their mortality, the second gives the attacks in their order as to time and place, and the third shows them in their monthly distribution. Taken together and read with the map, these statements give almost all the information that is obtainable—for instance, we can take from them the population of the areas invaded, the numbers who, out of this population, were attacked, the numbers who died, and the proportion of attacks to deaths.

7. In 1871 out of 7,977,806 persons, 10,472 had Cholera, and 5,821 died from it. In 1872 out of 8,906,932 persons, 25,164 had it, and 15,642 died. In 1873 out of 2,434,969 persons there were 377 attacks and 283 deaths. In 1874 out of 4,587,134 persons there were 63 attacks and 37 deaths. These details are here shown :—

Years.	Population of Areas invaded.	Total of Attacks.	Total Deaths from Cholera.	Of living one attacked out of every	Of living one died out of every	Attacks to Deaths per 1,000.

* Prior to 1869 Nasik was a portion of the Khandesh and Ahmadnagar Collectorates.
† Prior to 1869 Kolaba was a portion of the Tanna Collectorate.
‡ Number of deaths taken from Health Officer's Report from 1866 to 1870, inclusive.
§ Prior to 1868 Broach was a portion of the Surat Collectorate.
‖ For 1872 the Shikarpur returns were too imperfect to be published.

Taking the deaths by months, it is seen that both in 1873 and 1874, the greatest number of deaths occurred in March, but in 1873 the number (1,961) was nearly three times that for 1874, when it was only 639.

11. The minimum for each year is in October, and the difference between the two numbers is only 8.

12. For the first quarter of 1874 we have 1,296 deaths against 4,668 in 1873, for the second it is 1,572 against 3,787, for the third it is 570 against 1,007, and for the fourth it is 465 against 473. These details are thus tabulated :—

Years.	January	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total
1873...	1,184	1,523	1,961	1,662	1,240	885	536	301	170	127	160	186	9,935
1874...	290	367	639	606	500	466	287	161	122	119	134	212	3,903

Years.	1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.	Total.
1873 ...	4,668	3,787	1,007	473	9,935
1874 ...	1,296	1,572	570	465	3,903

13. They are also shown by seasons :—

Months.	Seasons.	Deaths from Small-pox.		Rate per 1,000 on Total Population.	
		1873.	1874.	1873.	1874.
Dec., Jan., Feb., March.	Cold	4,854	1,508	0·30	0·09

* Prior to 1869 Nasik was a portion of the Khandesh and Ahmadnagar Collectorates.
† Prior to 1869 Kolaba was a portion of the Thana Collectorate.
‡ Number of Deaths taken from Health Officer's Report from 1866 to 1870, inclusive.
§ Prior to 1868 Broach was a portion of the Surat Collectorate.
‖ For 1872 the Shikarpur Returns were too imperfect to be published.

15. There are also shown the deaths from "All Causes" and those from "Fevers", together with the percentage of the latter to the former, in each of the last five years—

Years.	Total Deaths from all Causes.	Total Fever Deaths.	Percentage of Fever Deaths to Total Deaths.
1870...	219,758	131,035	60
1871...	279,726	167,677	60
1872...	355,960	206,747	58
1873...	290,972	188,201	64
1874...	278,652	183,717	66
Means	285,014	175,475	62

16. It will be seen that considerably more than half of all our registered mortality is recorded as from "Fevers." If the total of deaths from "All Causes" be taken as 100, they may be distributed as follows amongst our specified causes :—

From Cholera	...
,, Small-pox	2
,, Fevers	66
,, Bowel Complaints	9
,, Accident or Violence	2
,, All other Causes	21
All Causes...	100

17. For 1874 the deaths were 183,717 and in 1873 they were 188,201. Of males they were 97,766 was that here given—

18. Last year in 7 out of the 24 Districts, the deaths in each exceeded 10,000, and the maximum was 15,746 in the Satara Districts. In 1874 it is the same, and again the maximum is in Satara. In the Deccan Division the deaths in 1874 exceeded those in 1873 by 6,687, but everywhere else they were less this year. By ratios the mortality was highest in both years in Surat. These results will all be seen in the following table:—

Divisions.	Registration Districts.	Deaths from Fever.		Rate per mille on Total Population.

ACCIDENT OR VIOLENCE.

24. This heading comprises death from other than natural causes, and the total for the year is 6,165 against 5,951 in 1873. The total includes 3,634 deaths of males and 2,531 of females: a proportion of 100 to 70. The ratio per 1,000 on the total population is 0·38, and in 1873 it was 0·37. The rate of mortality is here given for each Registration District from 1866 to 1872, both years inclusive :—

STATEMENT showing, for the Bombay Presidency Registration Districts, the RATIO *per* 1,000 *to Total Mortality from* ACCIDENT *or* VIOLENCE *calculated on the total Estimated Population for each year, from* 1866 *to* 1872, *both Years inclusive.*

Division.	No.	Registration Districts.	1866.	1867.	1868.	1869.	1870.	1871.	1872.	Average Death-rate for seven years.

SECTION III.

METEOROLOGY.

SECTION III.

METEOROLOGY.

In this Presidency we are still without an organised system of meteorological observations, worthy of the name, and there is little to show beyond a somewhat imperfect register of Rain-fall. On this point, however, the Returns for 1875 will, I hope, be of more value than those hitherto submitted.

2. The Rain Gauges now in use throughout the several districts are of different and unknown areas, and there is reason to believe that, in many instances, the measures originally issued have been replaced by others, graduated for gauges of a different capacity.

3. It is proposed to recall all these old gauges and measures, and to issue in place of them a standard pattern gauge in the form of a funnel with a receiving area of 17·33 square inches and a diameter of 4·697 inches.

4. There will be issued with each funnel a brass measure, the larger cup of which will hold one fluid ounce, and since one fluid ounce represents 1·733 cubic inch of water, it follows that for every fluid ounce collected by this funnel and measured by this brass cup, one-tenth of an inch of rain will have fallen.

5. The inner side of the cup is divided by circles into 9 equal parts or divisions, and the top, or rim, is the tenth division, so each is equal to one cent, or the one-hundredth of an inch.

6. Instructions will accompany each gauge, and it is pointed out that an ordinary bottle may be used to receive the rain-fall; but it should be seen that the funnel is well fitted to it, and when fitted, it should be placed on a stand two feet above the ground, and protected against animals. It should be in the open, and not screened by trees, buildings, &c.

7. After a fall of rain the bottle-receiver and the funnel should be removed bodily into the room, where the amount is to be registered, and here the quantity should be carefully registered. If rain be still falling, or if the receiving bottle be full, it will be well to have a second bottle into which the funnel may be shifted and replaced on the stand.

8. In measuring the quantity collected it may for convenience be poured into any vessel, that has a lip, and from this vessel it can be poured into the brass cup, which should be placed on a level surface. Each time the brass cup is filled marked down one-tenth, and when it has been filled ten times marked down one inch, and when there is no longer enough to fill it, note carefully at which circle the water stands: that circle will give the number of cents. In this way it can be determined how many inches, tenths, and cents have fallen.

9. The rain-fall should be registered for each month in the year, and not merely for the monsoon months. The bottle and funnel should be kept clean and free from accumulated dust. The brass cup should also be kept clean, but not polished to such an extent as to rub out the circles marked on it.

10. Such are the instructions, and, although the machinery may seem clumsy, it must be remembered that many of those who will use it, can do little more than read and write. The object has been to introduce one uniform gauge which cannot be altered, and one uniform measure which cannot be broken. It will be easy to supplement, or to replace the brass cup, by a graduated glass measure, and I hope this may be done eventually.

RETURN showing the Monthly Rain-fall and its Means for the Year 1874 *at the subjoined Stations, compiled from Monthly Returns submitted to this Office and published in the weekly "Government Gazette."*

SECTION IV.

THE FOOD SUPPLY OF THE PEOPLE.

The subjoined paper by Dr. Lyon, the Chemical Analyser to Government, carries its own explanation, so it is given verbatim :—

FOOD-EQUIVALENTS

FOR FACILITATING THE CONSTRUCTION OF NATIVE DIETARIES AND CALCULATION OF FOOD PROBLEMS GENERALLY.

A healthy male European adult of average height and weight in moderate work requires per day about 300 grains of Nitrogen and 4,600 grains of Carbon. In hard work about one-sixth more than these quantities is required; and about two-thirds of these quantities, viz., 200 grains of Nitrogen and 3,070 grains of Carbon, would be almost a starvation diet.

Nitrogen Equivalents or Number of Ounces Avoirdupois of each Article of Diet required to yield 300 Grains of Nitrogen.

CLASS A, where the Carbon is in GREATER proportion to the Nitrogen than 4,600 *to* 300.

	Ounces.
1. CARROTS (Parkes)	750
2. POTATOES (ditto)	300
3. RICE, Patna, purified (Polson)	60
4. WHEATEN BREAD, English Hospital, ? crust included	55
5. RICE, J. J. Hospital	52
6. JOWAREE, *Sorghum Vulgare* (Parkes)	50
7. COMMON MILLET, *Panicum Miliaceum*(,,)	47
8. BAJREE, *Pencillaria Spicata* (,,)	43
9. MAIZE (Edward Smith)	39
10. WHEATEN BREAD (Baker's), J. J. Hospital, crust included	36
11. OAT MEAL (Parkes)	35
12. WHEAT FLOUR, J. J. Hospital	30

CLASS B, where the Carbon is in LESS proportion to the Nitrogen than 4,600 *to* 300.

	Ounces.
1. GOOD MILK, J. J. Hospital	90
2. MEAT, uncooked (bone allowed for) (Parkes)	36
3. FISH, poor in nitrogen, eel and sole (Payen)	34
4. TOOR, *Cajanus Indicus* (Forbes Watson)	19
5. GRAM, *Cicer Arietinum* (Parkes)	19
6. FISH, rich in nitrogen, Mackerel (Payen)	18
7. COOLTEE, *Dolichos* (Forbes Watson)	18
8. OOREED, *Phaseolus*(,,)	17
9. DHOLL, *Ervum lens*(,,)	17
10. PEA, *Pisum Sativum*(,,)	16
11. TOOR, rich specimen, J.J. Hospital.	15
12. BHOOT, *Soja Hispida*(Forbes Watson)	11

Carbon Equivalents, *i. e.*, Number of Ounces Avoirdupois of each Article required to yield 4,600 Grains of Carbon.

All grains and pulses	26	ounces.
Milk	150	,,
Meat	90	,,
Fish	56	,,
Bread	34	,,
Ghee, Oil, or Fat	13	,,
Potatoes	90	,,
Carrots	250	,,
Sugar	23	,,

Or in round numbers.

6	oz. Milk contain as much Carbon as	1 oz.	of grain or pulse.
3½	oz. Meat	1 oz.	,, ,,
2	oz. Fish	1 oz.	,, ,,
1⅓	oz. Bread	1 oz.	,, ,,
½	oz. Ghee, Oil, or Fat	1 oz.	,, ,,
3½	oz. Potatoes	1 oz.	,, ,,
10	oz. Carrots or green Vegetables	1 oz.	,, ,,
⅞	oz. Sugar	1 oz.	,, ,,

Note.—The figures given represent fresh fish; dried fish ought to be reckoned as containing more Nitrogen and Carbon than fresh fish, say, 1 of dried fish equals about 2 to 3 of fresh fish.

Unless meat or fatty substances in some form or other form a considerable portion of a diet, 1 to 2 oz. of fat per day should be allowed for each individual; a certain quantity of common salt and condiments should also be allowed.

EXPLANATION.

I. The number of ounces of any article of diet required to yield 300 grains of Nitrogen is shown as its Nitrogen equivalent; these numbers therefore also show the relative value of each article as a source of Nitrogen.

II. If less or more Nitrogen than 300 grains is required, reduce or raise the Nitrogen equivalents in proportion; thus for 200 grains reduce the numbers by ⅓, for 150 grains by ½, and so on.

III. All articles may be replaced by others in the proportion of their respective Nitrogen equivalents without altering the quantity of Nitrogen.

IV. To give 4,600 grs. of Carbon, 26 oz. of grains and pulses must be taken, as shown by the table of Carbon equivalents.

V. For less than 4,600 grains of Carbon, proportionately less than 26 oz. of grains and pulses must be taken.

VI. In calculating the Carbon, allow 6 oz. of milk or 3½ oz. meat or potatoes or 2 oz. fish or 1⅛ oz. bread or ½ oz. ghee, oil, or fat, or 10 oz. carrots, or ⅞ oz. sugar to reckon as 1 oz. grain or pulse.

VII. To construct a dietary, take any one article and replace it piecemeal by others in proportion of their Nitrogen equivalents, adding 1 to 2 oz. of ghee, fat, or oil, unless much meat or fatty substances are present, when less may be added.

VIII. After replacing, as directed by Rule VII., sum up the ounces of grains and pulses, adding for the other articles in the proportions stated in Rule VI. If the total equals 26 oz., 4,600 grains of Carbon are present.

IX. If the total obtained by Rule VIII. is greater than 26 oz., and 4,600 grains of Carbon is required, replace an article of Class A by one of Class B; if less than 26 oz., replace one of Class B by one of Class A.

X. To analyse a dietary. For the Nitrogen—for each article, establish a fraction with the number of ounces present in the dietary as the numerator and the Nitrogen equivalent as the denominator, add these fractions together the sum is the fraction of 300 grains of Nitrogen present. For the Carbon—add together the number of ounces of grains and pulses, allow for the other articles in the proportion given in Rule VI., make the total the numerator of a fraction and 26 the denominator, the result is the fraction of 4,600 grains of Carbon containted in the dietary.

XI. The tables of course may be used in calculating the cost of living on certain articles of food, in calculating subsistence allowance in famine districts, and as a ready reckoner in food problems generally.

EXAMPLES

Illustrating the Working of Food Problems by means of the Table of Food Equivalents.

Example I.—*Construction of a Dietary.* Articles of which it is to be composed: Rice, Wheat flour, Gram, Meat and Milk. 300 grains of Nitrogen and 4,600 grains of Carbon required.

1. Nitrogen equivalent for Rice 60 ounces; divide this into any number (say 10) equal parts, and proceed to replace as follows:—

2. Replace say 3 parts or $\frac{3}{10}$ of a Nitrogen equivalent for Rice, equal to 18 ounces, by $\frac{3}{10}$ of an equivalent = 9 ounces of Wheat flour.

3. Replace $\frac{2}{10}$=12 ounces Rice, by $\frac{2}{10}$ of a Nitrogen equivalent of Gram=3·8 ounces.

4. Replace $\frac{2}{10}$=12 ounces Rice, by $\frac{2}{10}$ of Nitrogen equivalent of Meat=7·2 ounces.

5. Replace $\frac{1}{10}$=6 ounces Rice, by $\frac{1}{10}$ of an equivalent of Milk=9 ounces.

6. Add, in accordance with Rule VII., 1 ounce of Ghee, Oil, or Fat.

7. Rice left=1—$\frac{8}{10}$=$\frac{2}{10}$ of an equivalent, or 12 ounces.

8. Hence the articles in question taken in the following quantities give 300 grains of Nitrogen:—

Wheat flour	9	oz.
Rice	12	,,
Gram	3·8	,,
Milk	9	,,
Meat	7·2	,,

and 1 oz. of Ghee has been added to supply fat.

9. Now as to the Carbon. The diet as above contains 9 + 12 + 3·8=24·8 ounces of grains and pulses; add to this, in accordance with Rule VI., 2 oz. for the 1 oz. of Ghee, 1½ oz. for the 9 oz. of Milk, and say, 2 oz. for the Meat=5·5 oz.; then 5·5 + 24·8=30·3: hence quantity of Carbon=$\frac{303}{600}$ of 4,600 grains.

10. The Carbon being in excess may be reduced in accordance with Rule IX. by replacing by an article of Class B one of Class A, say Meat for Rice, deduct then 6 oz. of Rice and add Meat 3·6 oz., the grains and pulses now equal 18·8, the addition for Ghee, Milk, and Meat=6·5, total 25·3=$\frac{253}{600}$ of 4,600 grains of Carbon: 35 oz. of Fat or Ghee, or in round numbers, ⅓ of an ounce, would just make up the difference.

Result.—If the diet is composed of Rice 6 oz., Wheat flour 9 oz., Gram 3·8 oz., Milk 9 oz. Meat 10·8 oz., Fat or Ghee 1⅓ oz., the required Nitrogen and Carbon, 300 and 4,600 grains, is obtained. Of course salt and condiments should be added.

Example II.—*Construction of a Dietary.* Articles of which it is to be composed, same as in Example I. Quantity of Nitrogen required 200 grains, quantity of Carbon 3,070 grains.

Repeat (in accordance with Rule II.) the process exactly as given in Example I., using 40 instead of 60 as the Nitrogen equivalent of Rice, 20 instead of 30 as the Nitrogen equivalent of Wheat flour, 12⅔ as the Nitrogen equivalent of Gram, and 24 as the Nitrogen equivalent of Meat. For the Carbon, in accordance with Rule V., use the number 17⅓ in place of 26.

EXAMPLE III.—Analysis of a dietary consisting of, say, 12 oz. Rice, 8 oz. Wheat flour, 4 oz. Toor, 4 oz. Meat, and 1 oz. Ghee (J. J. Hospital half diet B.)

1*st.*—For the Nitrogen 12 oz. Rice $= \frac{12}{60}$ of an equivalent; 8 oz. Wheat flour $= \frac{8}{30}$; 4 oz. Toor $= \frac{4}{19}$; 4 oz. Meat $= \frac{4}{36}$: hence $\frac{12}{60} + \frac{8}{30} + \frac{4}{19} + \frac{4}{36} = \frac{240}{300}$ of 300 grains Nitrogen = Nitrogen 240 grains.

2*nd.*—For the Carbon, grains and pulses $12 + 8 + 4 = 24$, Ghee 1 oz. by Rule VI. = 2 oz., Meat 4 oz. by Rule VI. $= 1\frac{1}{7}$ oz. $= 24 + 2 + 1\frac{1}{7} = \frac{27}{26}$ of 4,600 grains Carbon = Carbon 4,800 grains.

EXAMPLE IV.—To find the least quantities of certain articles, say Bajree and Bhoot, which, when taken together, would yield per head per day a subsistence allowance of Nitrogen 200 grains and Carbon 3,070 grains.

Nitrogen equivalents for 300 grains Nitrogen = Bajree 43 oz. and Bhoot 11 oz.; 200 grains only required, hence 86 oz. Bajree = 600 grains, or enough Nitrogen for 3 days; similarly Bhoot 22 oz. = 600 grains of Nitrogen. Carbon equivalent for grains and pulses 26 = 4,600 grains; hence 52 = 9,000 grains, or enough for 3 days.

Hence $86 - 22 = 64$, and $86 - 52 = 34$, and $34 \div 64 = \cdot 531 \times 22 =$ Bhoot 11·6 oz., and $52 - 11{\cdot}6 =$ 40·4 oz. Bajree. Result quantity per head for 3 days, Bhoot 11·6 oz. and Bajree 40·4 oz.

EXAMPLE V.—The population of a district live on Wheat flour and Gram, eating them in the proportion of 3 parts Wheat flour to 1 part Gram: query—how much of each required per head per day for 200 grains of Nitrogen?

$\frac{3}{5}$ of the Nitrogen equivalents = 20 and $12\frac{1}{2}$ respectively; $300 \div 20 = 15$, and $100 \div 12\frac{1}{2} = 4$, and $15 + 4 = 19$; then 19 days' diet = 300 oz. Wheat flour, and 100 oz. Gram, and $300 \div 19 = 15{\cdot}8$, and $100 \div 19 = 5{\cdot}2$. Result required per head per day 15·8 oz. Wheat flour and 5·2 oz. Gram — 200 grs. of Nitrogen, and $15{\cdot}8 + 5{\cdot}2$ or $21 = \frac{21}{26}$ of 4,600 grains Carbon.

Note.—Regard should always be paid to the relative proportions in which by custom or habit articles of food are consumed by a population. This often indicates a limit of digestibility which ought not to be greatly exceeded.

SECTION V.

A RECORD OF PERSONAL PROCEEDINGS.

SECTION V.

A RECORD OF PERSONAL PROCEEDINGS.

The preparation of the Census Report has again prevented my going about, and I have only to report one visit to Pandharpur, made under special order from Government. On this occasion I could do nothing more than confirm what had been said in my Report already published, but I had the advantage of seeing the great gathering of pilgrims, and the place at the season of heavy rain, and saw how the ordinary disadvantages were aggravated.

2. The Census Report being off my hands, I propose to devote as much time as possible to tours of inspection, and in future reports I hope to give the records of personal observations.

3. In the Memorandum by the Army Sanitary Commission on my Report for 1873, there are one or two remarks which show me that on certain points, not only have I failed to express my meaning, but I have actually conveyed a contrary impression, and the opportunity is taken to explain more clearly what was then intended.

4. As regards my proposal to fix the standard death-rate for the Presidency at 18·2 per 1,000, I agree with the Commission in thinking it is too low, but then no other was to be obtained from the somewhat questionable materials dealt with from 1865 to 1872. In calling it the "standard rate", I meant rather that it was the datum for a period when perhaps less attention was paid to the registration system, and as such it would be a sort of beacon to warn us away from it: departure from it would denote improved registration.

Memo. para. 8.

5. As regards the statement, that, at Pandharpur, "deep pits" would be better than their trenches, it was not argued that they would be better everywhere, and already I had described the condition of the trenches as perfectly appalling; that no words could state their loathesome and indecent foulness, no language too strongly condemn them; that cattle and pigs wandered through them at will, and scarcely waited for places to be vacated; and that it was positive cruelty to compel the people to resort to them. To put a stop to this state of things, I suggested that they should be curtailed in their length and deepened, so as to bring them more together as it were. It was clear that more ground had been taken up than could be looked after; and knowing that pits had been used elsewhere, and had been a success, I proposed that they should be tried. There was not a chance of the water-supply being polluted in the smallest degree.

Memo. para. 26.

6. As regards my suggestion that "*direct house connexions should be absolutely prohibited,*" I would point out that, in the Presidency generally, such a thing as a house trap is not to be found. Even in Bombay City they are the rare exceptions, and untrapped connexions are the rule. Mr. Walton, the Municipal Engineer, devised a plan for the better carrying off of liquid house waste, and it has been tried with great

success in one of the most crowded quarters of the city. In the house-gulley, or passage, there is placed a sink which receives the sullage: it is provided with a flap trap, and between it and the sewer is a syphon trap. All the down take pipes discharge into a trough, which runs under them at right angles, and leads over the mouth of the sink. Between the sink and the trough there is a break, and between the trough and each down take pipe there is another. The diagram was forwarded to Pandharpur, and I myself explained its details.

See Diagrams.

SECTION VI.

SANITARY PROGRESS.

SECTION VI.

SANITARY PROGRESS.

By Government Resolution in the Military Department, No. 604, dated 3rd February 1872, it was ruled that the Cantonment Committee Reports shall, for the future, be embodied in the Annual Report from this Office.

It will be seen that there are 27 of these reports, and they give information upon the following points :—

1. Health of the Corps forming the Garrison.
2. Drainage within the Cantonment.
3. Water supply.
4. Accommodation for the Troops.
5. Conservancy.
6. Cleanliness of the Station.
7. Quality of Rations supplied to Troops.
8. Other defects.
9. Measures adopted for improving sanitation.
10. Suggestions for remedying existing defects.

The reports are given verbatim and there is appended to each the "Remarks by the Quarter Master General by order of H. E. the Commander-in-Chief."

Under this section there is given a list of works, &c., connected with the accommodation, health, or comfort of the Troops. General Orders, too, and Circulars are also given, together with the Statement of Annual Reliefs.

For the civil population there is an equally active supervision, but the great want is want of funds. Extensive works for irrigation and water-supply are in progress at various places—more especially at Kurruckwasla near Poona, and at Pandharpur.

SANITARY REPORT OF ADEN FOR 1874.

Section I.—Health of the Corps forming the Garrison.

The health of the troops in camp has been good.

The prevailing disease amongst the European Troops in camp has been fever, attributable to heat and previous exposure to malaria during a prolonged residence in India.

The prevailing diseases amongst the Native Troops in camp have been ague and scurvy, the former imported and the latter attributed in part by the Medical Officers to the inferior quality of the vegetable ration, though the quantity is abundant.

There were only two deaths amongst the European Troops, one attributable to heat apoplexy, and the other to sunstroke.

There were eight deaths amongst Her Majesty's 2nd Grenadiers N. I.: none being due to any local causes existing in Aden.

The total admissions to hospital in Her Majesty's 2nd Grenadiers N. I. for 1874 were 437, as compared with 672 in 1873 and 1,020 in 1872.

At the Steamer Point Position fever, diarrhœa, and rheumatism amongst Europeans, and ague and rheumatism amongst Natives, have been the chief diseases.

The general state of health of the troops at Steamer Point has been good.

Section II. (*a.*)—Drainage within the Cantonment.

There is no system of drainage in Aden; but as a heavy fall of rain seldom occurs, no inconvenience is caused thereby. The Kussaf Valley Water Works, when completed, will tend still further to reduce this want of drainage, because the flow of water through the camp from this valley will be less.

Section II. (*b.*)—Water Supply.

No further remarks are needed under this head beyond what were stated in last year's Report. The Tawela Tank water was again analyzed during the year and found to be pure and of good quality, and no disease has been induced by the use of it.

Section II. (*c.*)—Accommodation for the Troops.

The accommodation for the troops is generally good, and there is no over-crowding; but in the Aden Troop Lines the want of cook-rooms necessitates cooking in the space allotted for living in.

Hospital accommodation is much required for the Aden Troop, and has been recommended.

The Camp and Sanitarium Hospitals at Steamer Point for British Troops are unsuitable for the purposes for which they are required. They have, however, been much improved by asphalte floorings and thorough repairs to make the buildings as comfortable and healthy as circumstances will allow.

The lines of the Sappers and Miners are old and bad, but cool. The plans for new lines were recently rejected as being too expensive.

Section II. (*d.*)—Conservancy.

The general system of conservancy is good, but the inferior cattle procurable at Aden and the frequent ravages of murrain render it a difficult matter to keep the conservancy carts properly equipped. The Aden Municipality has lately tried camels in lieu of bullocks for some of its carts. Should that system be found economical and satisfactory, it might be adopted.

There is a want of latrines for the Aden Troop.

None of the cantonment land is cultivated. Trees have been planted in various spots, and those at the Steamer Point Position are in a thriving condition.

Section II. (*e.*)—Cleanliness of the Station.

The station generally is clean. The conservancy havildar and peons have been very efficient in checking nuisances.

The Daswin Bazaar, containing 40 houses, is kept clean: several of the houses have been re-built and much improved during the year.

Private compounds are clean.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations supplied to the troops have been good, and there is no deficiency in quantity.

The price of ghee was suddenly raised for a few weeks in November, owing to the closing of the port of Bulhar. Importation from elsewhere has corrected this sudden rise.

SECTION II. (*g.*)—OTHER DEFECTS.

The Native Infantry Lines should be provided with receptacles for rubbish. At present whenever a high wind blows, which is of frequent occurrence in Aden, the rubbish is scattered in all directions.

The latrines of the Native Infantry, however cleanly kept, must from their position be somewhat of a nuisance. Disinfectants should be allowed for use in them. A recommendation has been submitted to the Quarter Master General on this head.

The Commanding Officer's house at Perim requires improvements, and a recommendation has been submitted on this head.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

1. A new latrine for followers has been built in the Isthmus Position.

2. Two new latrines for the Sappers and Miners, one for the men and one for the women, are in course of construction.

3. A new mess-house for the European Regiment is nearly completed, and will form a very commodious building.

4. Improvements are being carried out in the roof of the Native Infantry Hospital.

5. New lines for the Store Lascars with appropriate latrines have been completed, and the unsightly huts in the Little Isthmus removed.

6. The Government Bakery is at work, and the bread turned out is of good quality.

7. The burial ground for carcases of dead animals has been removed still further from the line of works at the Isthmus Position.

8. A canteen has been constructed for the Garrison Battery of Artillery at Steamer Point.

9. Matron's quarters have been provided in the Female Hospital in camp.

10. An additional ward has been provided in the Female Hospital at Steamer Point, and the flooring has been asphalted.

11. A latrine is being built at Perim for the use of the detachment.

12. Sanction has been asked for the construction of two latrines, one at Ras Morbut, and one near the Duswin Bazaar, for the use of residents in the Duswin Bazaar.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*c.*)—

A further and detailed report touching the necessity for cook-rooms will be called for.

Section II. (*c.*)—

A plan and estimate for the construction of an hospital for the Aden Troop was submitted to Government in April 1874, when it was stated that there were no funds available for the work.

Section II. (*c.*)—

These improvements to the hospitals were carried out to avoid the expense of new buildings for which no money was (or is) forthcoming.

Section II. (*c.*)—

In consequence of the very large amount required for the construction of new lines—Rs. 43,993—Government ordered that the existing lines should be retained and kept in proper repair.

Section II. (*d.*)—

The provision of latrines for the Aden Troop will receive consideration during the ensuing financial year.

Section II. (*g.*)—

Receptacles for the collection of rubbish in Native Infantry Lines are not allowed by regulations; nor does the necessity for them appear to be of an urgent nature.

Section II. (g.)—

Application has been made to Government for sanction to the supply of disinfectants for the latrines.

Section II. (g.)—

The recommendation was submitted to Government, and the following reply given on the 29th August 1874:—"The practicability of finding funds for this work may be considered when the next Budget is under preparation."

SANITARY REPORT OF AHMEDNUGGUR FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

Health of the European Corps very good.

No special sickness or disease of an epidemic nature has prevailed during the year. Fevers of a mild type have formed the largest proportion of admissions due to climate rather than local causes. One death only during the year amongst the European Troops (abscess of hip-joint and casies of surrounding bony structure). Measles was prevalent amongst the children in the early portion of the year.

The health of Her Majesty's 13th Regiment N. I. has been remarkably good. The chief cause of admission into hospital was febricula conjunctivitis of a mild character, which prevailed to a slight extent during the year.

No death occurred in the regiment.

The health of the European and Native community inhabiting the station has been most satisfactory.

Population 4,572.

Deaths 80, or 8 per cent.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

Drainage superficial. No underground drains.

No jheels or marshes in the station or its vicinity.

SECTION II. (*b.*)—WATER SUPPLY.

Ample and of good quality, supplied to the European Troops from the Bhingar Aqueduct.

To the Native Troops from the Kapoorwadee Aqueduct.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

Barrack and hospital accommodation for the European and Native Troops has been ample and good to meet the requirements of the year. No over-crowding at any time.

SECTION II. (*d.*)—CONSERVANCY.

Conservancy or the dry-earth system is carried out in the European Corps, and contents of latrines removed in carts daily, also of urinaries and soiled water from ablution rooms.

In the Native Regiment the tank-cart system of conservancy is carried out.

In the Native Hospital Latrine the dry-earth in a modified form is used.

In the Sudder Bazaar Private Latrines these privies have now been placed in proper order. Pans and proper urinals are placed in each, and are kept clean and in a good sanitary state.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The station is kept clean in every respect.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations supplied to the European Troops by the Commissariat have been of good quality, and no complaints under that head brought under notice.

Food of the population generally has been abundant and cheap.

SECTION II. (*g.*)—OTHER DEFECTS.

None.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

In January 1874 it was resolved to water the roads in camp. After six weeks' trial little benefit was derived, owing to the difficulty of obtaining water. Prickly-pear hedge situated to the north of the cantonment removed. A bathing-pavement has been constructed in the Sudder Bazaar, which does away with the risk the drinking water runs of being defiled. Water has been introduced into the Kotla from the Kapoorwadee Aqueduct. A great boon with residents residing there. The Mahomedan Cemetery has been put in proper order.

The conservancy of the town of Bhingar has been thoroughly supervised.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a*, *b*, *c*, *d*, *e*, *f*, and *g*,) ALREADY GIVEN IN SECTION II.

A recreation-room fitted with some amusements is very much needed for the men who are sent during the hot season to Salabut Khan's Tomb.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section IV.

This suggestion will receive attention.

SANITARY REPORT OF AHMEDABAD FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The changes in the strength of the Troops in this cantonment during the year have been—

A Detachment 83rd Regiment.
H. M.'s 3rd Regiment N.L.I.
H. M.'s 9th Regiment N.I.

I.—The departure of the Head Quarters 18th B.R.A. and C/18th B.R.A. for Europe. Their place has not yet been supplied by another brigade. But another one is expected from England.

II.—The detachment of Her Majesty's 83rd Regiment was relieved by one from the head quarters of the same corps from Deesa, which arrived in December 1874.

2. The health of these troops during the period passed here has been good and satisfactory. Fever and ague have been the prevailing diseases.

3. Vaccination was extensively carried out in the Native Infantry Regiments in the months of January, February, March, April, August, September, October, and during that period 80 cases were successful. Only one case of small-pox and seven of chicken-pox were admitted in the hospital 3rd Regiment N.L.I. : all had marks of vaccination.

4. The following gives the statistics as regards sickness compared with strength :—

I.—European Troops—	
Average strength	264·25
Total admissions in the hospital	349
Total deaths in the year	8
II.—Native Troops—	
(*a*) 3rd Regiment N.L.I.—	
Average strength	642
Total admissions in the hospital	893
Total deaths in the year	2
(*b*) 9th Regiment N.I.—	
Average strength	637
Total admissions in the hospital	396
Total deaths in the year	2

5. There has been no epidemic during the year, and the health of the Staff and Details has been fair, and no casualty has occurred in the European community of the station.

6. The health of the natives in the Sudder Bazaar, &c., was on the whole good, and there have been no cases of small-pox during the year. There were 73 deaths, giving a percentage of 2·27 on the total population.

7. No cases of cholera occurred.

SECTION II. (*a*.)—DRAINAGE WITHIN THE CANTONMENT.

The defects in the drainage within this cantonment are, as reported in former years, owing to the surface of the cantonment being flat.

2. There is a deposit of water for one or two months after the rains, on the general parade-ground, a few yards to the N.E. of the officers' quarters.

3. Plans and estimates for cross-drains on the branch road, leading from the General's compound past the Royal Artillery Hospital to the Native Infantry Mess, were prepared and submitted to the Assistant Quarter Master General, N.D.A., for sanction.

SECTION II. (*b.*)—WATER SUPPLY.

The water-supply is plentiful and of fair quality. There are three wells for the lines of 3rd Regiment N.L.I., all of them giving an abundant supply of pure water. The 9th N.I. has also nine wells about their lines of pure and potable water.

The water of the river Saburmuttee is largely used by the people of the Sudder Bazaar.

The wells in the Native Infantry Lines will require thorough cleaning in the hot weather, as many of them become dry in that season.

A wooden apparatus, consisting of teak-wood posts and rollers, has been supplied to the well near the Hanooman's Temple to assist the lift of water. From this well the water is supplied to the patients in hospital of both the Native Infantry Regiments.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

The accommodation for Native Troops is sufficient according to their present strength.

2. The fact that the accommodation for European Troops was insufficient was noted in last year's Report.

The Quarter Master General remarked as follows:—

"The provision of proper accommodation for European Troops at Ahmedabad is, and has been for some time past, under consideration."

3. Harness-rooms and store-rooms for Royal Artillery have been completed during the past year.

SECTION II. (*d.*)—CONSERVANCY.

The European Troops have their latrine arrangements carried out satisfactorily.

2. The 3rd Regiment N.L.I. use permanent latrines during the whole year for want of space to open trench-latrines.

3. The trench-latrine system is carried out by the 9th N. I. during the fair weather, and they return to the permanent latrines during the monsoon.

4. The Sudder Bazaar residents have certain nullas allotted to them which they use, and the excreta is daily removed, in the filth carts to the manure-yard, and there disposed of in trenches dug for the purpose one foot deep and one foot broad.

5. The dry-earth system of conservancy is carried out in all the hospitals at this station.

6. Latrines for Native Followers are much required; there being at present none for the use of a large number of horse-keepers and other Camp Followers.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The station and bazaars throughout have been kept in a clean state.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations for the troops have been good.

2. The Sudder Bazaar is also supplied with fair and generally good and wholesome provisions.

3. The price of food for the population has greatly fallen in price during the latter part of the past year.

SECTION II. (*g.*)—OTHER DEFECTS.

The want of a permanent yard wherein to slaughter cattle and sheep was brought forward in the last Report, upon which the Quarter Master General remarked as follows:—

"This being a departmental work, an extract from this Report has been communicated to the Commissary General of the Army, with reference to Government Resolution, Public Works Department, No. $\frac{365 \text{ M. W.}}{1302}$, dated 1st June 1867."

2. The want of public latrines for the use of poorer classes of people is much felt.

3. The want of watering carts and necessary establishment for the cantonment roads and Sudder Bazaar causes much dirt and heat in the hot season which is unwholesome, and impurities held suspended in the air tend to injure the health of the troops.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

A straight and drained road to connect the main street of the Sudder Bazaar, with the cantonment roads at this station, has been made during the last year, and a slab drain 1' 3" opening were provided to allow of the free passage of water which collects on the open ground to the north.

2. A quarter guard and cells for British Infantry have been sanctioned, and they are now in course of being constructed.

3. A small masonry barrel-drain of one foot in diameter across the road, in front of the 3rd Regiment N. I. Hospital, has been constructed in the place of a tile drain, which had not sufficient water-way to carry away the rain-water.

4. A masonry gutter 3" × 2½" at one end has been constructed to a length of 89 running feet to carry off the urine from the latrine of the 3rd Regiment N.L.I.

The Committee have no suggestions to offer further than bringing forward the urgent necessity that exists for supplying the Sudder Bazaar, as well as the followers of the Royal Artillery with latrines, and watering the roads; and would point out that in a hot climate like that of Ahmedabad, the atmosphere must be largely and injuriously affected, when the hot wind blows the road dust all over the cantonment.

The ground round the new quarter guard and cells under construction will require draining as the water lodges about them.

Small culverts are much needed over the nulla leading through the camp.

Two or three good cheap wells are required close to the roadside at convenient places for the supply of water. At present water has to be drawn from long distances at much cost by the Engineer Department when mending the roads.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*a.*)—*Construction of cross drains.*

The plan and estimate for the construction of the cross drains alluded to, have not been submitted to Army Head Quarters, and it is not known what action has been taken thereon.

Section II. (*c.*)

Plans and estimates for new barracks at Ahmedabad are now before Government.

Section II. (*g.*)

The Commissary General, in answer to this communication, replied that "the Executive Engineer, Ahmedabad, reports that funds have not yet been provided by Government for the execution of the work alluded to, nor does he know when money will be made available."

The watering of the roads would be an expenditure which there are no funds to meet. The Commander-in-Chief considers that it is a work which might well be carried out by private subscriptions.

Section IV.

The provision of latrines for natives will receive consideration on the submission to Army Head Quarters, of a proposal for supplying the same; and the General Officer Commanding, Northern Division, has been so informed.

Section IV.

Vide remark under Section II. (*g*) of this Report.

Section IV.

This should be seen to by the Cantonment Committee.

Section IV.

This should be seen to by the Cantonment Committee.

Section IV.

This should be seen to by the Cantonment Committee.

SANITARY REPORT OF ASSEERGHUR FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The health of the troops, both European and Natives, has been good, and the general sanitary state as satisfactory, considering the many local deficiencies and drawbacks as can be expected.

The average strength of Detachment 1-2nd Queen's Royal Regiment from 1st January to 4th December 1874, date of departure was, ...	100
Ditto of Detachment 68th Regiment L.I. from the 2nd, of December to the 31st December 1874	102
Ditto of Detachment 16th Regiment N.I. from 1st January to 28th January 1874	120
Ditto of Detachment 4th Regiment N.I. Rifles from 26th January to 31st December 1874	148·75
Ditto of Garrison Staff and Detachments	68·25

Of these different corps, the admissions to hospital were as follows :—

2nd Queen's.	68th L.I.	16th N.I.	4th N.I. Rifles.	Garrison Staff.
112	11	24	259	25

From these the greatest number of admissions appears under the head of ague, viz.:—

Detachment 1-2nd Queen's.	Detachment 68th L.I.	Detachment Garrison Staff.	Detachment 16th N.I.	Detachment 4th N.I. Rifles.
50	...	12	5	117

Syphilis and gonorrhœa :—

European Detachments.	Garrison Staff.	Detachment 16th N.I.	Detachment 4th N.I. Rifles.
9	1	...	1

Hepatitis.—One case only among the Europeans ; Natives none.

Deaths :—

Detachment 2nd Queen's.	68th N.I.	Garrison Staff.	Detachment 16th N.I.	Detachment 4th Rifles N.I.
2	...	3	...	1

In 2nd Queen's there were two deaths; one from remittent fever, the other from hepatitis. In the Native Troops there was but one death from dysentery and general debility. In the Staff 3 deaths occurred: one from Bright's disease of the kidneys, one from snake-bite, and the third from splenitis and general debility. Invalids, none among the European Troops, among the Garrison Staff none ; among the Native Troops 8, chiefly from chronic rheumatism and general debility. There were 3 deaths among the European children Detachment 2nd Queen's ; among the women none. Fifteen cases of ophthalmia were admitted among the children. The general health and sanitary state of the station during the year was satisfactory. There have been no epidemics or other sources of disease, with the exception of an outbreak of small-pox in the early part of the year, mostly confined to the Native Troops, and chiefly their women and children. The Detachment 4th Regiment N.I. Rifles, among whom it first occurred on the 15th February, were removed from their lines to a camp at Lall Bagh, distant from the bazaar and foot of the hill, and there segregated until the disease had disappeared. Their lines having been fumigated and disinfected previous to their final return on 13th April 1874. A few cases (10) of varicella also occurred in upper and lower bazaar, which were at once removed in anticipation and separated in a hut built outside the pettah for that purpose.

The disease was accordingly arrested, and no further cases occurred during the remainder of the year.

Section II. (*a.*)—Drainage within the Cantonment.

The drainage is open, natural, speedy and good over the rock, and there are no jheels or marshes in the station or its vicinity.

Section II. (*b*).—Water Supply.

The water-supply remains as last year still insufficient.

Officers, troops, and residents kept on allowances for the greater part of the year.

Section II. (*c.*)—Accommodation for the Troops.

The accommodation of the troops, Europeans and Natives, was as follows :—

For Europeans.

Two new barracks	average	...	Ct. S.	2,432	square area	95 per man.
Musjid barracks	do.	...	„	2,119	„	192 „
Quarter guard	do.	...	„	1,240	„	82 „
Solitary cells 1 and 2	do.	...	„	1,125	„	100 „
European Detachment Hospital		...	„	12,793	„	666 „

The bath-rooms, lavatories, cook-rooms, latrines, and urinals of above have been sufficient, and kept in a good sanitary state.

The Native Detachment were quartered in 6 blocks of pendals without verandah, each 160 × 20 × 8.

Quarter guard 18 × 10 × 8.

These places generally are small, low, and raised but slightly, from ground ; have no means of being lighted, aired, or ventilated, except through doors. There are no windows, and general sanitary condition of buildings is imperfect.

Section II. (*d.*)—Conservancy.

In the latrines used by Europeans, dry-earth conservancy was duly carried out, and these were kept clean and in a good sanitary state.

The garrison latrines used by natives were kept clean; but owing to the use of ablution water, the good result otherwise arising from dry-earth conservancy seems, in some measure, to have been defeated.

Since the adoption of the new conservancy system, namely, lowering the night-soil in receptacles from the Siven Gate, and removing it to a distance, it has worked admirably, and no complaints have been made.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The cleanliness and sanitary condition of the station, generally native bazaars and private compounds, &c., have been satisfactory.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations and diet have been generally good. Beef has been issued to the troops five days, and mutton twice a week, except in October and November, when preserved pork and beef were issued once a week alternately. Bread, potatoes and vegetables, tea and sugar, &c., of good quality and regulated quantity.

The rations are cooked according to the wishes of the men themselves, and the variation thus introduced appears to conduce to the health and comfort of the troops.

SECTION II. (*g.*)—OTHER DEFECTS.

Nil.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Detachment 4th Regiment N. I. Rifles removed to the Lall Bagh below during the prevalence of small-pox from the 17th February to 13th April 1874.

A grass hut, placed outside and separated from pettah, was used for the infected during the prevailing epidemics.

Lines of detachment disinfected and fumigated after leaving their quarters to go into camp below, owing to prevalence of small-pox.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

The insufficiency of the water-supply was brought to notice during the late visits of His Excellency Sir A. Spencer, and also of His Excellency Sir C. Stavely, and the matter was represented to the Chief Commissioner, Central Provinces.

A filter, made in the Mammoo Bhanja Tank in 1872, was again tried by the Executive Engineer, Hoshangabad Division, but on analysis the water was condemned. Correspondence on the subject still going on.

There is one well for Europeans, and the sepoys and bazaar have a tank to themselves.

The tanks are very low, and there is every reason to fear that the well will run dry this hot weather, as it did in 1872, although the Europeans have been kept on an allowance for the last three months. I cannot too strongly urge the necessity of some scheme being introduced for the better supply of potable water.

I also think the tanks should be cleared. The Sukker Bowrie was partially cleaned in 1872; the sepoys' tank in 1865; and there is no record to show when the Mammoo Bhanja was cleaned. Should that be done, it is probable that the water then filtered would stand analysis.

A system of pumps and pipes to conduct the water from well or filter into suitable reservoirs situated in vicinity of barracks and family-quarters.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*b.*)

On the Commander-in-Chief's visit to Asseerghur in November last, His Excellency again brought the state of the water-supply at Asseerghur to the notice of the Chief Commissioner, P. W. D., Central Provinces, who immediately called upon the Executive Engineer for a detailed report on a scheme which that officer had under consideration for improving the water-supply. The result has not yet been made known to this department. In anticipation, however, of a failure in the water-supply during the ensuing hot season, Government has been asked to sanction a supply of puckauls for use with the Field Column Carriage for the conveyance of water from the foot of the hill.

Section IV.

Vide remarks under Section II. (*b*) of this Report.

SANITARY REPORT OF BARODA FOR 1874.

Section I.—Health of the Corps forming the Garrison.

The corps composing the garrison consist of a Detachment Royal Artillery, numbering 1 officer and 31 non-commissioned officers and men, and Her Majesty's 22nd Regiment N. I.

Both the European and Native Troops suffered from fever, chiefly ague, during the past year. The following table gives the number of admissions into the Royal Artillery Hospital :—

Admissions	108
Average daily sick	2·5
Percentage of admissions to strength	348·4

There were no deaths. Five men were sent to Bombay for change of air.

There were 1,130 men treated in the 22nd N. I. Hospital, 673 of which number were cases of ague. There were 8 deaths, as follows:—1 remittent fever and 1 intermittent, in both there were chest complications ; 1 pneumonia, 1 bronchitis, chronic, 1 aneurism of thoracic aorta, 2 suicides (gun-shot wound of chest), and the 8th case died out of hospital, when on furlough, from acute bronchitis.

There were no epidemics, and no cholera cases reported during the year under consideration.

Section II. (*a.*)—Drainage within the Cantonment.

There are no defects in the drainage within cantonment.

The water is carried away during the rains by drains or trenches made in different parts of camp.

There is no existence of jheels or marshes in the station or its vicinity.

In the vicinity the rain lies, and certain tracts are not dry until long after the camp has become so, but these tracts are under cultivation, and are not within British jurisdiction.

Section II (*b.*)—Water-Supply.

The drinking water is obtained from several wells near the barracks and lines. The wells are all protected from contamination. The quantity, except in the hot weather, is sufficient. No complaints have been made as to its quality; but in all wells I have examined, the water contained more or less of chlorides and sulphates.

Section II. (*c.*)—Accommodation for the Troops.

The European Troops occupy two separate blocks of building. These answer their purposes for such a small number of men. There is no over-crowding either in barracks or hospitals.

The "lines" occupied by the Native Troops consist of ten rows of mud huts, divided into four sections. These are all old and tottering. Within each hut there is almost total darkness, with little or no ventilation.

New "lines" should be built.

Section II. (*d.*)—Conservancy.

The latrines and urinaries provided for the European Troops are in good order and quite satisfactory.

The latrines for the Native Troops are closed, and the trench system is carried on. I consider this system to be impracticable in cantonment generally, on account of the limited space. In the "lines" the nearest well is about 150 yards from the line of trenches, and the river Vishramuttee is less than 100 yards distant.

The contents of the latrines in the Sudder Bazaar are buried into pits close at hand. There is an invincible repugnance here to the employment of humane excreta as manure, and the nightsoil is therefore at present unused.

In the bazaar there is much difficulty in providing for the disposal of bath and sink water and urine. These waters are at present received into porous earthen vessels, sunk in the soil, but comparatively little inconvenience is experienced where these receptacles are kept clean ; but the whole substratum of the bazaar must now be well saturated with decaying organic matter.

SECTION II. (*e*).—CLEANLINESS OF THE STATION.

The station, private compounds, and native bazaar are kept clean.

Soon after the rains, orders were issued to trim hedges, and to remove rank vegetation, and for the lopping off of the under branches of large trees which abound in camp. This was done, and it is presumed contributed in some measure to the healthiness of camp, by removing causes of malaria, and allowing more circulation of air.

SECTION II. (*f*).—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

Beef and mutton have been of an average quality.

There has been no unusual deviation in the market price of the food of the population generally.

SECTION II. (*g*.)—OTHER DEFECTS.

The water-shed of the bazaar needs urgent rectification.

The torrents of many years have swept the soil from the streets, and new and irregular drainage channels have been established.

The camp water-shed also, leading into the river near the Rewakanta Jail and the bazaar, needs alteration. The presence of an intelligent Engineer Officer is much needed to survey the banks of the river, and cause proper channels to be established thereto, in place of the tortuous and varying exits created by the monsoon floods.

In the bazaar the crowding of the houses and their generally ruinous state, have engaged the Committee's attention.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

The multiplication of pit-earth privies, as suggested by one of the Committee, has been approved of, but the measure has not been carried out on account of the want of funds. The privy has been described at length in a previous report.

The watering of the bazaar roads would be an important addition to the comfort and health of its denizens. The air during the dry weather is filled with a fine floating dust, which irritates the occular mucous surfaces and pulmonary passages.

The erection of a lifting water apparatus in the Commuteepoor River side would make this measure an economical one; but an Engineer Officer is needed.

Houses which had fallen into a ruinous state in crowded localities, have been pulled down, and the sites have been resumed.

SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

There is a natural reservoir, which, with the assistance of an artificial dam on one side, confines the rain-water during the rainy season, the water from which feeds the wells in the neighbourhood.

This is authenticated by the testimony of some of the oldest residents, which tends to show that the drying up of the water in the reservoir is always followed by the drying of that in the wells.

It is recommended that this reservoir should be deepened and the bund repaired.

The rapid failure of the wells last year alluded to indicate that this is a very necessary measure.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (c.)

The estimate for the construction of new lines is at present under revision.

Section II. (g.)

A further report as to the measures proposed to remedy these defects has been called for.

Section III.

There are no funds available for watering the roads.

Section IV.

An estimate of the cost of carrying out this improvement has been called for.

SANITARY REPORT OF BELGAUM FOR 1874.

Section I.—Health of the Corps forming the Garrison.

Health very good on the whole. Fever, rheumatism, pulmonic affections, with derangements of the abdominal viscera, including the liver and intestinal worms, especially the nematoidra or round-worm;—all these ailments may be fairly attributable to local causes—that is, a very variable temperature in the hot season when the wells are nearly empty. No epidemic of any sort has visited the station during the year, and the health of the European and Native community has been decidedly good.

Section II. (*a*).—Drainage within the Cantonment.

Well-made paved open drains should be constructed, so as to prevent the lodgment of water, and under-ground drains should be extended. At present they are almost exclusively confined to the neighbourhood of the new barracks. The rice and sugar-cane fields on the borders of the cantonment, though for a considerable portion of the year marshy, are unobjectionable in a sanitary point of view.

Section II. (*b*).—Water Supply.

The water-supply is very satisfactory; the wells are numerous; the water is abundant, and from an analysis made from six wells in camp, it was found pure and good, uncontaminated and agreeable in taste. The supply is exclusively from wells drawn—as is customary all over the country—by leather-bags attached to ropes.

Section II. (*c*).—Accommodation for the Troops.

The accommodation for European Troops is ample. The house accommodation or lines for the Native Infantry Regiments are as good as are usually met with, but as badly situated as they can be on the extreme south-east of the cantonment, at the lowest point of a sloping ridge, and quite close to the rice-fields or swamps. There is ample accommodation of the sort, and here is no such thing as over-crowding either in the lines or hospitals. The situation of the barracks for European Infantry is, as regards climatic influences, very similar to the old barracks. The situation of the barracks for the artillery is objectionable, especially during the monsoon and cold seasons, which embraced at least nine months of the year.

Section II. (*d*).—Conservancy.

As regards the Native Infantry Lines, dry conservancy cannot be carried out simply from the faulty construction of the latrines, which might be so constructed that every drop of fluid would gravitate to, and run into, closely covered receivers at either end of the latrines, leaving the dry excreta to be removed separately. All the latrines for the natives are faulty in construction, and in consequence, however indefatigable the sweeper may be in his exertions, considerable stench and most offensive odour arises from them. All this could be completely avoided. No sewage has been utilized for manure. Native prejudice is as yet stronger than common sense.

Section II. (*e*).—Cleanliness of the Station.

No want of cleanliness.

Section II. (*f*).—Quality of Rations supplied to the Troops.

No inferiority in the quality of rations. The cereals are all good of their kind, and the market prices have, as a rule, through the past year, ranged favourably for consumers.

Section II. (*g*).—Other Defects.

The Lascar Lines are low and badly situated, and it is recommended that they should be moved to a more healthy site to be selected.

Section III.—Measures adopted to improve the Sanitary Condition of the Station.

The conservancy has been strictly attended to and satisfactorily carried out during the past year.

Section IV.—Suggestions for remedying any of the defects still existing under the several heads (*a*, *b*, *c*, *d*, *e*, *f*, and *g*) already given in Section II.

Suggestions for remedying defects are given in *a*, *d*, and *g*. There are no defects in *b*, *e*, and *f*. With regard to *c*, the Native Infantry lines are situated in low ground, but, as far as I can ascertain, they are not unhealthy. I am informed that these lines have only lately been constructed. I do not myself consider that the situation of the new barracks for artillery is objectionable. They are situated on high ground which facilitates drainage; and the arrangement by which the verandahs of the upper-stories, facing the monsoon winds, are protected by venetian blinds is I think excellent, as it will keep out the rain without preventing ventilation.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (a).

An estimate of the cost of repairing the surface drains in the cantonment was prepared during the past year; but owing to the large amount required, the work could not be undertaken.

Section II. (c).

Vide opinion of Brigadier-General Kirby, under Section IV., in which His Excellency the Commander-in-Chief concurs.

Section II. (d).

A report as to the suggested design for perfecting the construction of these latrines has been called for.

Section II. (g).

This would be a very expensive measure, for which no money is forthcoming. Moreover, it is not shown that the lines are, in reality, unhealthy.

SANITARY REPORT OF BOMBAY FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

Average Strength, 1,343.

The general health of the troops, as judged by the percentage of treated to strength, has been better than in 1873; but, on the other hand, there appear to have been more cases of acute disease, as shown by the greater number of deaths, which are greatly in excess of the previous year.

2. The treated have been 1,164 from a strength of 1,343, or 86·7 per cent., against 100 per cent. in 1873; of these 650 from a strength of 629, or 103 per cent., are from the 20th Regiment, 394 from a strength of 564, or 69 per cent., from the 21st Regiment, and 120 from a strength of 160, or 80 per cent., from the Detachment of the 4th Rifles. The average daily number of sick has been 57, or 4·24 per cent., of strength.

3. The deaths during the year have been 15, being 7, or 1·11, to strength, and 1·08 to treated in the 20th Regiment, 7, or 1·2, to strength, and 1·78 to treated in the 21st Regiment, and 1, or 0·66, to strength, and 0·83 to treated in the detachment of the 4th Rifles. The total of deaths 15, being 1·11 to strength, and 1·29 to treated against 0·74, both to treated and strength in 1873.

4. The far larger proportion of sickness in the 20th Regiment than either in the 21st or 4th Rifles, is, no doubt, almost entirely due to the unfavourable condition of their lines, which has been noticed too often to require further comment here.

5. There has been no cholera during the year 1874.

6. Six cases of small-pox occurred during the year, of these, 1 woman and one child belonged to the 20th Regiment, and 4 children to the 21st Regiment; 1 child died.

7. Measles was epidemic in the 20th Regiment during the months of October, November, and December, during which time 8 sepoys, 1 boy, 4 women, and 46 children were attacked; in the 21st Regiment, 1 sepoy, and 4 children: no death occurred.

8. Nineteen cases of scurvy occurred in the 20th Regiment, and 1 died: there were 5 cases in the 21st Regiment, and 3 in the 4th Rifles.

9. The principal diseases have been as usual in Bombay: ague 291, rheumatism 68, diarrhœa 69, dysentery 36, bronchitis 45, to which may be added contusions and local injuries 105, of which a large part are from shoe-bite.

10. Fifteen deaths have occurred from the following causes:—Remittent fever 3, pneumonia 2, hepatitis 2, diseases of the heart 2, pulmonary apoplexy 1, phthisis 1, hæmoptysis 1, scurvy 1, tetanus 1, debility 1.

11. Vaccination has been regularly carried on both among children and recruits. The result has been—

	Successful.	Unsuccessful.	Total.
Primary vaccination ...	161	8	169
Re-vaccination ...	39	40	79

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

No change has been made in the lines of either regiment. During the heavy rains of June and July, the huts of the 21st Regiment became very damp on the side of the streets, on which no weather screens were put up, apparently from the drip off the eaves splashing up against the walls and soaking through from the surface to the floors. Attention was called to this by the Medical Officer, and the lines were visited by the Brigadier-General Commanding the Garrison, accompanied by the Executive Engineer; his attention was, at the same time, called to the necessity of some mode of drainage being carried out, to prevent water lying stagnant on the parade-ground of the 21st Regiment during the rainy season. The system of drainage in the lines of the 21st, which was mentioned in last year's Report, has been tried through another year, and has acted very well indeed.

The smell from the Sonapore Drain is still at times very offensive, notwithstanding this fact has been prominently brought to notice in the Monthly Board of Health Reports.

SECTION II. (*b*). WATER SUPPLY.

The water-supply is good. The drinking water is entirely supplied by the Vehar main; and there are several wells in the vicinity of the lines, which yield sufficient water for washing and other purposes.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

There is sufficient accommodation for the Native Troops; but in the lines of the Marine Battalion, the streets between the pendalls are very narrow, and there is not sufficient ground to admit of their being widened. These lines were built many years ago, when a much smaller space was allowed for the lines of a regiment than at present.

SECTION II. (*d.*)—CONSERVANCY.

There are no urinals in the lines: there are two latrines, one at Boree Bunder, the other in the Marine Lines, for the use of patients in the hospital. The men and families of the Marine Battalion make use of the public latrine at Sonapore, and this arrangement answers well enough for the men, but is a great hardship for the women and families. There are no defects in these latrines. The necessity for a latrine and bath-room for the patients in the hospital now used by the 20th Regiment N. I. has been urged by both the military and medical authorities, but their erection has not yet been sanctioned.

(In abeyance pending settlement of transferring Native Infantry Hospitals to Fort George.)

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

Not generally, but it is found very difficult to enforce habits of cleanliness in the lines of the Municipal sweepers.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

No rations are issued to the Native Troops: grain compensation has been received by them monthly.

SECTION II. (*g*).—OTHER DEFECTS.

No defects beyond those pointed out in Section II.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

The house and surface drainage of the Marine Lines has been greatly improved as pointed out in Section II. The erection of upper-storied barracks for a regiment of Native Infantry in lieu of the Boree Bunder Lines has been strongly recommended, and is under consideration.

(In abeyance.)

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

The Board has no suggestions to offer.

REMARKS BY THE QUARTER MASTER GENERAL BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (a)

In a resolution in the Public Works Department, dated 28th January 1873, the Commander-in-Chief was assured that Government would endeavour to improve the existing state of matters. It is not known in this department what steps have been taken to mitigate the nuisance since that date.

SANITARY REPORT OF BHOOJ FOR 1874.

Section I.—Health of the Corps forming the Garrison.

Garrison 11th Regiment N. I.

Average Strength, 667.

This report includes the period, 11 months, from the date of arrival of the 11th Regiment, forming the garrison, on 26th January to 26th December 1874. Nothing worthy of note took place prior to the arrival of the 11th Regiment, during which period the garrison consisted of two Companies of the 20th N. I.

The health of the troops has been very good during the past year: the total number of admissions in eleven months has been 327, of which 88 were due to ague: the highest daily average of sick has been 18·7 in the current month, the lowest 7·6 in March. October gave the greatest number of admissions for fever. There has been a marked immunity from fever this year, both amongst the troops and the civilians in cantonments, and I am given to understand that the same held good in the city and the country generally. The rainfall in Bhooj was 12 inches 3 cents against 5 inches 11 cents in 1873.

No case of small-pox or cholera has occurred during the year: there have been no cases of scurvy, but one or two men under treatment in hospital for other diseases showed a tendency to it.

Five deaths occurred in hospital: 1 from remittent fever, 1 from chronic rheumatism, 1 from pnuemonia phthisis, 1 from salivation (sudden failure of heart's action), and 1 from fracture of skull (accident.) Two deaths took place out of hospital: 1 suddenly apparently from heart disease, 1 from hanging (suicidal.)

The health of the families of the regiment has been good: a few cases of the measles occurred amongst the women and children in the months of May, June, and July, and fever was slightly prevalent in October.

The health of the inhabitants of the Sudder Bazaar has also been good: two or three cases of measles occurred amongst the children.

The accompanying table shows the number of admissions into the Regimental Hospital according to months, and the principal diseases for which those admissions took place.

Section II. (*a.*)—Drainage within the Cantonment.

I have no remarks to make under the heading; the cantonment being located on a rocky slope, the surface drainage is complete. There are no jheels in the vicinity, nor tank within half a mile of camp limits.

1874.	Average Strength.	Total Admissions.	Average Daily Sick.	Ague.	Rheumatism, Sub-Acute Chronic.	Syphilis, Primary.	Phthisis.	Bronchitis and Pneumonia.	Dysentery.	Diarrhœa.	Disease of Spleen. Section II. (*b.*)—Water Supply.

The supply of water which is drawn exclusively from wells was rather scanty prior to the first fall of rain in June last, but has since been abundant. Three wells situated in the lines are used for purposes of ablution only. In those set apart for drinking, the water is used, but pleasant to drink and apparently wholesome. There are no sources of contamination in the vicinity of the wells, with the exception of dust and leaves which may get blown in, as they are uncovered. Before the annual clearing out in May last, the water contained a considerable amount of animalculæ, but this has not been since noticed.

SECTION II. (*c*)—ACCOMMODATION FOR THE TROOPS.

No change has been made in the lines: the accommodation appears sufficient. Any modification would necessitate complete renewal, which would entail great expense.

The hospital accommodation has been ample, as the sick list has never risen to the amount provided for.

SECTION II. (*d.*)—CONSERVANCY.

The trench system of latrines has been in use during the past year, and has been found to answer fairly. Occasionally with a moist heavy state of the atmosphere, an offensive smell has been perceptible for some distance from the trench actually in use, but not so bad as that often experienced with the old style of latrine. No offensive smell has at any time been perceived from the filled-in trenches.

No cultivation has been attempted on the land which has been used.

The inhabitants of the Sudder Bazaar pay for their own conservancy. The establishment consists of one sweeper at Rs. 6 per man. The resident population is small, as most of the shop-keepers sleep in the city. An estimate of the cost of a trench system of latrines was submitted last year, but the outlay has not been sanctioned. The ground outside camp limits especially a deep nullah, is much resorted to. Stray bullocks and donkeys acting as scavengers Money is wasted to effect any change for the better.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The cleanliness of the station generally is well attended to.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

There has been no unusual deviation in the market price of food.

SECTION II. (*g.*)—OTHER DEFECTS.

None.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Bank growth of buds was removed after the rains. Attention has been paid to the trees already planted and several young trees have been planted; but, under hand-watering only, their growth is very slow. The roads have been kept in a good state of repair and cleanliness.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

None.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (d).

The Government of India declined to sanction the extra charge for the provision of trench latrines for the residents of the Sudder Bazaar.

SANITARY REPORT OF COLABA FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The health of the troops has not been so good in 1874 as it was in the previous year. In 1873 the admissions, for all diseases, were 687, deaths 5; in 1874 admissions 839, deaths 12. The following are the diseases to which the increased sickness has been due. Malarious fever which has prevailed to a greater extent than usual, rheumatism, principally muscular, and neuralgic affections. There have been fewer admissions from hepatitis. Ague and remittent fever each give one death, one from dysentery, one from heart disease, one from aneurism of aorta, one from peritonitis, four from abscess of the liver. Two deaths occurred out of hospital: one from apoplexy, and one from aneurism of the aorta.

Except for ague, there is no special cause of disease at Colaba.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

There is a small salt-water marsh on the Back-Bay side, not very far from the barracks, which has been credited with being the cause of ague so prevalent at Colaba. This is, I think, a mistake, as experience shows that salt-water marshes, that are covered twice a day

by the sea, are never malarious. The soil of Colaba is very porous, and composed principally of sand and disintegrated trap, and, I have no doubt, contains the miasmatic poison which is set free by moisture, and is given forth when the earth begins to dry after the rains have ceased. Owing to the peculiar rocky formation, the subsoil water does not readily flow off; and I believe that if deep drains were constructed to carry it off quickly, Colaba would become one of the healthiest stations in the Bombay command. The great prevalence of ague is, in my opinion, due to the retention of the sub-soil water which does not drain away, and takes a long time to evaporate through the porous earth.

SECTION II. (*b.*)—WATER SUPPLY.

Vehar water is used for all purposes, and is of first rate quality, and the supply sufficient. h ere are no means of it being contaminated at Colaba.

This supply, in the hot weather, fails to reach the higher ground of Colaba, and has to be brought up by bheesties.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

There has been no change in the accommodation of the troops, which is the same as last year. No over-crowding either in hospital or barracks.

New barracks are being built.

SECTION II. (*d.*)—CONSERVANCY.

The system of conservancy for the troops is very good indeed, and the latrines are always clean and in good order. McDougall's powder is used instead of dry earth, and if more expensive, answers the purpose better.

The latrines for natives, which have been kept closed for nearly three years, were opened a few days ago, and if no improvement is made in the way their sanitary arrangements are carried out, it would be far better to close them again. Each latrine is cleared twice in the 24 hours at 4-0 A.M. and at 3-0 P.M. Under each seal in the latrine is placed a basket, which, while it retains the fœces, allows the earth to become saturated with urine. The smell in the latrines in the morning is most unpleasant and powerful, and of course gets worse throughout the day, and becomes more offensive.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

None.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations are always good.

SECTION II. (*g.*)—OTHER DEFECTS.

There are no special dust-bins for either barracks or hospital. The station dust-bins are too far away to be of much use.

Screen walls for the hospital latrines have not been built.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

None. Have commenced 1st January 1875. The use of the native latrines and the foreshore is not now fouled.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

As regards the new latrines for natives, I have suggested that if the Municipal Corporation do not wish to be at the expense of removing the urine at the same time as the fœces, two pans of glazed earthenware should be provided for each seat, one above the other, the upper one to be pierced with a few small holes to allow the urine to drop into the pan beneath. Separate iron air-tight receptacles should be provided for the urine and fœces, and the former could be emptied into the sea, and the latter carted off. McDougall's powder should be placed in each pan, and the contents should be emptied every two hours into the iron air-tight receptacles provided for that purpose.

Vide my letter No. 5439 of the 22nd instant.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (d).

The state of these latrines was reported to Government on the 30th of January 1875 th a recommendation that such instructions might be issued as would ensure their being wept in a proper state of cleanliness by the Municipality.

Section II.—(g).

The want of dust-bins for the barracks and hospital was noted in the Report for 1873, when the following remark was made thereon :—

"The Brigadier General Commanding Bombay District reports that dust-bins for barracks and hospital are, in his opinion, unnecessary ; and His Excellency the Commander-in-Chief concurs in that opinion."

The Brigadier General Commanding Bombay District was directed in April 1874 to have the screen walls to the hospital latrines constructed, and to debit the cost to his assignment, so soon as the orders of Government were received on the Budget for the year.

Section IV.

Vide remarks under Section II. (*d.*) of this Report.

SANITARY REPORT OF DEESA CANTONMENT FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The following troops have been stationed here in 1874 :—

The 83rd Regiment, the 2nd Cavalry, the 18th Regiment N. I.

The health of the 83rd Regiment has been fair, the percentage of sick out of a strength of 683·66 having been 5·66. Twelve men have died, namely, 2 from pneumonia, 1 pulmonary extravasation, 1 gangrene of limbs, 1 liver, 1 dysentery, 1 peritonitis, 1 heart disease, 2 apoplexy, 1 sunstroke, and 1 fever.

From June to November there were 150 admissions from fever.

During the year there were 62 admissions from syphilis, 20 dysentery, 26 conjunctivitis, and 13 from general debility. These diseases are attributed to the climate.

Ophthalmia broke out among the women and children in June, and lasted till September ; very few of the women or children escaped attack, and not a few of the married men suffered. The majority of admissions were from conjunctivitis, but many were cases of purulent ophthalmia. 1 woman died from dysentery, and 10 children ; six of the latter were from teething.

The average strength of the 2nd Cavalry and 18th Regiment N. I. together was 877 The average daily sick was 38·57. The general health has been fair.

Ague was the prevailing disease, and principally during the monsoons. There have been 8 deaths, namely, 1 from ague, 1 from heat apoplexy, 2 from old age, 1 from fever, and 3 from phthisis pulmonalis. There has been no epidemic amongst the troops or in the bazaars.

The general health of the native population has been good.

Population about 10,000.

Deaths in 1873, 243.

Deaths in 1874, 128.

The general health of the European residents has been very fair.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

None.

SECTION II. (*b.*)—WATER SUPPLY.

The water-supply is abundant and of good quality.

The only source from which contamination might occur would be from rubbish being blown down the mouth of the well.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

No insufficiency occasioning overcrowding in barracks or hospitals.

The accommodation for the Cavalry Regiment, both in the lines and in hospital, is ample, and there are no defects to point out.

The lines of the Native Infantry Regiment are old, and everywhere show signs of decay, though they have been continually repaired.

SECTION II. (*d.*)—CONSERVANCY.

No defects regarding conservancy.

No part of the cantonment land is manured with station sewage.

SECTION II. (e.)—CLEANLINESS OF THE STATION.

None.

SECTION II. (f.)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations have been generally of good quality.

There was no unusual deviation in the market price of the food of the population.

SECTION II. (g.)—OTHER DEFECTS.

Made roads throughout the cantonment are much wanted. In the heavy sandy soil of Deesa such roads would be a great boon to all the residents.

A Civil Hospital is required.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Royal Artillery Lines.

New culverts near the Artillery lines constructed.

European Infantry Lines.

A dressing-room to the gymnasium-shed added.

Some of the gymnastic apparatus altered.

Iron-pipe drainage to the whole of the bath-rooms provided.

Punkahs in the barracks altered.

Punkah rings covered with leather.

No. 2 hospital ward temporarily converted into an ophthalmic ward

Teak-wood stands and boards in the gymnasium-shed provided.

Native Cavalry.

Verandah of the hospital to form a bath-room partitioned.

Native Infantry.

New armourer's shop constructed. A small room at one of the ends of the hospital added.

Estimates for providing wooden covers to all the wells in cantonment have been submitted to Government, but funds not being available, the estimates remain unsanctioned.

A plan and estimate of a short line of road from the corner of the Cavalry Mess to the main road near the porter stores was submitted for sanction and returned, no funds being available.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a*, *b*, *c*, *d*, *e*, *f*, and *g*) ALREADY GIVEN IN SECTION II.

That roads be constructed in the following localities:—

Along the front of each line of officers' houses in the Royal Artillery Lines.

Along the front of each line of officers' houses in the European Infantry Lines.

Along the front of the line of Staff Officers' quarters.

Along the front of the quarters of the officers in the Cavalry Lines.

That a road, already partially made from the Native Infantry Hospital to the Cavalry Mess, be completed and continued round that mess till it joins the main road by the porter stores.

That a Civil Hospital be constructed to meet the requirements of the civil population (numbering about 10,000), allowing for sufficient accommodation for staff patients.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (g.)

The orders of Government are awaited on Quarter Master General's letter No. $\frac{10-220}{5439}$ dated 25th October 1873, recommending the construction of roads, and the provision of funds for the same by instalments.

Civil Hospitals are not provided for in the Military Department. Nevertheless, His Excellency the Commander-in-Chief recommends the suggestion of the Cantonment Committee to establish one at Deesa, for favourable consideration—*vide* Section IV.

Section IV. (g.)

Vide Section II. (g)

SANITARY REPORT OF DEOLALEE FOR 1874.

Section I.—Health of the Corps forming the Garrison.

There is no permanent garrison at this station. At the close of last trooping season there were left behind 111 men, chiefly belonging to two batteries of Artillery stationed at Nasirabad and Nimach. These Batteries, D and E/18th, gave 73 admissions into hospital, 58 of which were from ague, and one of remittent fever, which terminated in death. During the whole year there have been 512 admissions into hospital and 13 deaths. The chief diseases being ague, 111 admissions, hepatitis 39, phthisis pulmonary 26, general debility 26, dysentery 16, diarrhœa 19; also 19 cases of acute, and 22 of chronic rheumatism; of the latter, the acute came chiefly from on board ship. Of the 13 deaths, 4 were from phthisis pulmonary, 2 epilepsy, 1 each of remittent fever, apoplexy, hemepligia, dysentery, and general debility. Nine were invalids, two were from England. The average strength 39·58; and the total admissions of women into the Female Hospital has been 67, of whom there were 5 deaths, one of which was from England, the patient dying of phthisis. The average strength 85·93, and the total admissions of children have been 79, of whom 13 died, no less than 5 died of general debility, and under the age of 12 months only one fatal case came from England—a case of measles.

Section II. (*a.*)—Drainage within the Cantonment.

No defects.

Section II. (*b.*)—Water Supply.

From eight wells, and the supply is of excellent quality and sufficient in quantity. The wells require covering.

Section II. (*c*).—Accommodation for the Troops.

The accommodation for the troops is very good.

It has been ample throughout the year.

The married families have only been doubled up one night.

Section II. (*d*).—Conservancy.

There are no defects in the conservancy.

Section II. (*e*).—Cleanliness of the Station.

None.

Section II. (*f.*)—Quality of Rations supplied to the Troops.

None.

Section II. (*g.*)—Other Defects.

There is a tape to the south-east, and adjacent to cantonment limits, which is defiled by a number of squatters, and is a nuisance to the inhabitants in the neighbourhood.

Section III.—Measures adopted to improve the Sanitary Condition of the Station.

Trees have been planted, and the general cleanliness has been well attended to.

Section IV.—Suggestions for remedying any of the defects still existing under the several heads (*a, b, c, d, e, f,* and *g*) already given in Section II.

The tape to the south-east should (if possible) be taken into cantonment limits.

The two latrines in the bazaar are very offensive, being close to the main (and only) road to Nasik: their removal would be very desirable.

The present Lock Hospital has been reported unsafe; it is only a temporary building; the Committee would recommend the erection of a new building.

The wells require covering.

Remarks by the Quarter Master General, by order of His Excellency the Commander-in-Chief.

Section II. (b.)

No funds are available for covering the wells.

Section II. (g.)

To bring the tape alluded to within cantonment limits, as suggested under Section IV., would cost a very large sum of money. Moreover, the Brigadier General Commanding Bombay District recently reported that he had issued such instructions as would, in all probability, effect the spontaneous withdrawal of the squatters from the vicinity of the camp.

Section IV.

Vide remarks under Section II. (*g.*)

Section IV.

This is the first report received regarding the offensiveness of these latrines. The matter will be enquired into.

Section IV.

A new Lock Hospital has recently been sanctioned.

Section IV.

No funds are available for covering the wells.

SANITARY REPORT OF DHARWAR FOR 1874.

Section I.—Health of the Corps forming the Garrison.

During the year 616 cases were admitted into hospital. 14 remained on the 1st January, making the total number treated 630 : the percentage of treated to strength was 93, deaths to strength 6, and deaths to treated 6. The daily average number of sick was 30·8. Four deaths occurred during the year : one from acute rheumatism, one from abscess, one from constipation, and one from guinea-worm. The prevailing diseases have been—guinea-worm 142, bronchitis 59, ague 57, abscess, 51, contusio 50, chronic rheumatism 43, ulcer 40, lumbago 20. By far the largest number of admissions was from guinea-worm. This disease gave 23 per cent. of the total number of admissions. February, March, April, and May gave 116 of the total admissions for this disease, which was, in all probability, caused by the bad water drawn from stagnant tanks or wells. I hope that, with the unusually abundant rain-fall this year and the well-water at the new cantonment, the regiment will suffer but slightly in 1875 from this disease. 49½ inches rain fell last monsoon ; the average for the last nineteen years being 30½ inches.

Bronchitis.—59 cases were admitted for this disease, 26 of them in July and August, attributable to exposure, to which the men were necessarily subjected in the line building : most of them having to travel a distance of two miles to their work, and the same distance, of course, back again.

Ague.—57 cases only of this disease were admitted. In the previous two years this disease gave the greatest number of admissions ; in 1872, 200 ; and in 1873, 132.

Abscess gave 51 admissions, one of these died : it was very large ; the man being anæmic and scorbutic, and giving one the idea that he had not had sufficient food. The principal treatment consisted in feeding him with mutton and milk, &c., &c., and administering lime-juice and tonics.

Contusions gave 50 admissions, principally caused by accidents in line building and shoe-bites, and of a trifling nature.

Syphilis.—13 cases were admitted, which compares favourably with last year. The same may be said of

Gonorrhœa and its complications, which also gave 13 admissions.

Section II. (*a.*)—Drainage within the Cantonment.

In the old station of Dharwar there are no jheels or tanks adjacent to the men's lines having a prejudicial effect on health ; and the fort, in which the officers live, is kept clean, and its conservancy duly attended to by the Officer Commanding the Station, and his Board of Health under arrangement with the Collector ; the rest of the civil station is under the Municipality as regards conservancy.

In the military ground on which the new lines are building and the future cantonment the drainage is excellent, and the rain-fall all goes into two tanks ; the smaller one has had its bund increased, and a sluice and waste weir made to it by the regiment during the past year.

Sanction was obtained in May to effect the same improvements to the large tank, but the work could not be done till after the monsoon, and its commencement was further impeded by the Collector's action in the Revenue Department, in applying to have control of the water of this tank. Government finally decided the matter in favour of the military by Government Resolution No. 4382 of 23rd November 1874, and this very necessary work for the water-supply was commenced after its receipt in December.

SECTION II. (*b.*)—WATER-SUPPLY.

In the new camp water-supply is likely to be abundant and good from 2 tanks and 3 wells: the larger tank and the 3rd well near the future bazaar to rear of lines are not yet finished for use.

In the old station, the monsoon supply of water was excessive this season, and the Collector's new water-shed arrangements for filling the Motee and Lall Tanks, which was completed in October 1873, have been quite a success, and the town is now much better supplied and no fear of water scarcity. More good wells or repairs to old wells are still required, as the quality of the tank-water is not good for drinking purposes, and filtration is not, I believe, understood by the natives.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

The old lines were condemned in 1866: they have been reported in former years as very bad; therefore, as the new pendalls at the new camp were one by one completed, they received their quota of men from the old lines, and about half the regiment is now moved there, and the remainder will be gradually moved in 1875. There has been no overcrowding in the past year, owing to these available finished new pendalls. Owing to the late monsoon (terminated here on 8th November) and the heavy dew, no men were put into tents at new lines since 1st April 1874.

At present the hospital used is the excellent one in the fort, it is two miles from the new lines; and a new hospital has been planned and estimated for, and sanction for it is given after 1st April 1875.

The military officers have no quarters reserved for them, and there has been great delay in having the new camp limits defined; it appeared in General Order on 2nd December 1874, and no compensation has as yet been allowed to officers or mess for the buildings that were prior to 1861 in the old military limits, then made a civil station.

SECTION II. (*d.*)—CONSERVANCY.

The old lines have uncovered latrines about 500 yards off, kept clean, and the ordure removed in a filth cart, and deodorized and buried. Four sweeper bildars only—allowed for both old and new lines—not enough.

There are also 2 old European barrack latrines in the fort similarly cared for. In the new camp the system is the dry-earth and trench-latrine. It has been successfully carried out, but it is desirable that there should be an establishment of 1 bildar sweeper per Company, the families being considered; and an allowance for annual expense of bamboo-matting screens in lieu of old cauants. And the native soldiers require matting divisions along the screen, their great objection to the system being the want of privacy; and I hope this can be provided for a small expense by a general regulation, and then the dry-earth system would work properly in all stations. The towns-people have very insufficient latrines, and the atmosphere in certain places is affected, but not in the neighbourhood of the old lines so as to call for interference from the officer in command.

One cart and bullock for removal of rubbish is sanctioned for military conservancy here.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The old lines and fort are kept clean by the military officer in command, also the new camp.

The rest of the station, town, &c., conservancy is in the hands of the Municipality, who act according to their light. I have nothing to say to it beyond bringing to notice through the Collector any nuisance arising.

Stray cattle are a great nuisance to the officers and to the men in old lines: the police do not take needful pains to abate this nuisance.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The bazaar is fairly supplied with wholesome food.

Local weights and measures are intricate and lead to disputes, and to the men being cheated, and proper standard ones ought to be used by law.

SECTION II. (*g.*)—OTHER DEFECTS.

None.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

As regards the old station, such measures, if any, are in the hands of the Collector and the Municipality.

As regards the new lines, the water-supply is progressing (*vide* page 5).

Roads and removal of prickly-pear and filling in quarry pits were sanctioned, and a commencement made six weeks ago.

A soldiers' garden, tree-nursery, and tree-planting in the lines and around is going on well.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a*, *b*, *c*, *d*, *e*, *f*, and *g*) ALREADY GIVEN IN SECTION II.

Relative to new quarters for 8 officers and the mess, I would suggest, in event of no action in the matter having been yet taken, that as a good mess-house is a great requisite for the new camp, and as Government, I believe, purchased the former mess-house for regulation price, Rs. 3,500, and use it as a Sudder Adawlut, and a similar building cannot be built now for anything like that sum (it would now cost Rs. 15,000 to build one like it), the mess of the present regiment, if it builds, should receive all the balance of material or cash over when the lines are finished to help it to build a good mess-house. Rs. 14,992-11-0 was sanctioned for the lines of new camp in addition to Rs. 12,000 drawn in 1867 by the late Colonel T. T. Piers, and which was most spent on material, part of which perished in the interim from 1867 to 1874.

REMARKS BY THE QUARTER-MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section IV.

An Annual Sanitary Report can scarcely be regarded as a proper medium for urging the construction of an officer's mess. The want of one may be a defect, but not in a sanitary point of view.

SANITARY REPORT OF HYDRABAD, SIND, FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The health of the corps forming the garrison during the year was not good. The chief disease requiring notice was malarious fevers of a very severe form, which caused an unusual amount of sickness and admissions into the various hospitals, European as well as Native. One European and four Natives died from it. The first part of the year before the rains (monsoon from June to September) was about as healthy as the corresponding portion of former years, but the rain-fall (inches 9·38) and the flooding of the Indus, both being unusually beyond the average, the surface of the country generally was covered with water; and when the Indus commenced to subside in September, and the surface of the country to dry up, malarious diseases occurred many in number and alarming in severity. The coincidence of the face of the Indus and the drying up of the surface water with the occurrence of numerous cases of malarious fever was no causal coincidence, but a natural sequence; the production of the latter depending on the two former. The fort, in which many Europeans and Natives reside, yielded a larger number of sick from malarious fever this year than usual caused by the rainfall and the insanitary condition of the place.

SECTION II. (*a*.)—DRAINAGE WITHIN THE CANTONMENT.

The drainage is superficial and is fairly effective, but might be improved in some places. There are no jheels or marshes in the vicinity.

SECTION II. (*b*.)—WATER SUPPLY.

The supply is fairly sufficient, but in the hot weather has to be economized, and becomes less pure as the wells and tanks become shallower. During the rains a large portion of the surface water of the camp flows into the hollows where the pucka-built wells are situated (from which the Native Infantry and camp generally obtain water), and must to a certain extent percolate into the wells.

SECTION II. (*c*.)—ACCOMMODATION FOR THE TROOPS.

The accommodation generally was sufficient; but in the latter part of the year a severe outbreak of malarial fever produced overcrowding of the 2nd Belooch and General Hospitals. The excess patients were accommodated in tents.

SECTION II. (*d.*)—CONSERVANCY.

The iron-pans in the Native Infantry Latrines are too short (inches 18), and the urine frequently falls outside them; an iron receptacle is required for each latrine, and additional carriage to remove the ordure, &c. The latrines for the Native Infantry Hospital, the General Hospital, and for Native Subordinates generally require iron-pans and receptacles; several of the latrines for natives are built of mud: additional assistance for sweeping, &c., is required.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

None. The native town is about the same as all native towns. The fort ditch on the town side requires cleaning. This has been intimated to the civil authorities.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

None.

SECTION II. (*g.*)—OTHER DEFECTS.

None.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Draining off surface water, airing, bedding, and clothing, whitewashing, deodorizing, and generally cleaning houses, &c. Partial surface purification and sinking earthen receptacles for the reception of sewage water from the Lascar houses. The sanitation of the fort and the latrines is under consideration. A water-scheme for supplying the cantonment and town from the Indus is being constructed.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

Some additional drains might be cut to carry off the rain-fall from the surface. The water-scheme under construction, which is to supply water from the Indus, will remove all defects as far as practicable. The latrines require iron-pans, 2 feet long, and a large iron receptacle for each latrine in which to collect the contents of the pans previous to removal; also an iron receptacle to receive the sewage water from each Lascar's hut. Additional sweeper and conveyance for sweepings is required generally throughout the cantonment, especially in the fort. The mud-latrines should be removed, and pucka-built ones built. Holes should be pierced in the fort wall to draw off the subsoil-water, and the eucalyptus gobulus might be planted in the fort as an experiment to test its malaria-preventing power. All the vegetable matter should be removed from the surface of the fort.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (b.)

"A water-scheme for the supply of the cantonment and town from the Indus is being constructed"—*vide* remarks under Section III.

Section II. (d).

These matters are receiving attention.

Section IV.

The whole of these matters are receiving attention.

SANITARY REPORT OF JACOBABAD FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The health of the troops has been bad, worse than it was last year. The principal diseases being malarious fever, pneumonia, and cutaneous diseases.

Percentage treated to strength...	...	...	...	172·7
„ deaths	„	...	...	3·3

The causes of diseases are the drying up of water in the neighbourhood of camp. All composition of vegetable matter and extremes of temperature.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

The Frontier Districts being situate in the valley of the Indus, malaria always prevails more or less. In 1874 the country round camp was submerged. There is still a large tract under water. In addition to this, an unusual quantity of rain fell, and there is no possibility of draining rain-water off. Camp lying so low.

SECTION II. (*b.*)—WATER SUPPLY.

There are numerous wells affording an abundant supply of good water. The water in the canals is by no means pure, and the native population have been forbidden using it for drinking purposes.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

The lines are all good. Those of the 1st Sind Horse are not as yet completed.

Hospital accommodation is much under the regulation. This deficiency is much felt during the fever season.

SECTION II. (*d.*)—CONSERVANCY.

Conservancy in the lines of regiments is good. The 3rd Sind Horse have built large latrines, instead of the small ones, in the lines used by the other regiments. Small latrines when kept clean are just as good as large ones.

Conservancy in the Sudder Bazaar is very fair.

Cantonment roads cannot be kept as clean as might be wished, owing to the Government allowance for station conservancy being so small.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The state of the Sudder Bazaar and Family Lines as regards cleanliness is not yet what it ought to be.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

Food is of a good quality and fair price.

SECTION II. (*g.*)—OTHER DEFECTS.

The Family Lines of the 4th Sind Horse (disbanded) are in a ruinous state. There are also portions of a bazaar in the middle of camp in the same condition.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Many trees have been cut down and branches lopped.

Lines for the 1st Sind Horse are in course of construction.

Estimates and plans have been called for for a new hospital for the 3rd Sind Horse and for increasing hospital accommodation of the other regiments.

The Executive Engineer has been called upon to submit a plan for draining camp.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

It would be a great advantage if the inundation water could be kept from overflowing the country in the neighbourhood of camp. And it is to be hoped that the bund now being built at Kushmore will accomplish this.

An increased allowance for station conservancy would be an improvement.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*g*).

An estimate, amounting to Rs. 640, for removing these dilapidated buildings, was submitted to Government in December last, when it was ruled that the work was not emergently necessary, and its execution must therefore be postponed.

Section IV.

The drainage of Jacobabad and the construction of works for the protection of the station from periodical inundations, are now receiving the earnest attention of the Engineer Department.

SANITARY REPORT OF KIRKEE FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

Royal Artillery.

General health during the year very good, though the admissions for ague were nearly double when compared with the year 1873, being for 1873, 88 admissions, and for 1874, 168. The increase in admissions for ague may be attributed to the very heavy rain-fall in 1874.

Sappers and Miners.

General health during the year very good, and the results directly opposite to those which have prevailed in the Royal Artillery. Admissions from ague during the year 152, as compared with 217 admissions in 1873, and 13 admissions from slight fever, as compared with 95 in the previous year; total admissions for 1873, 525, for 1874, 344. Ratio per cent. of

admissions to average strength from all diseases for 1873, 134·2, 1874, 86·6; average daily sick for 1873, 10·9, for 1874, 7·9; the strength for both years differs only by six, viz., for 1873, 391, and 1874, 397.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

Royal Artillery.

Drainage fair. The immediate vicinity of the water taps in the lines requires to be drained. Though the space referred to is very limited, there is frequently a most offensive smell caused by the lodgment of water there.

Sappers and Miners.

Drainage in Sappers' Lines and Cantonment Bazaar fairly good, but a drain leading from the bazaar and regimental dipping-well requires paving.

SECTION II. (*b.*)—WATER SUPPLY.

Royal Artillery.

Water-supply for ablution purposes ample. Drinking water of good quality supplied from a well situated near the railway station. It is highly desirable that a cover be provided for the well, as it is much exposed and likely to be contaminated.

Sappers and Miners.

The old lines are supplied with the Pashan Valley water brought in iron pipes; the supply is abundant and of good quality; the new lines are entirely dependent on the river for the supply of this needful necessary, and although the river water has been pronounced on analysis to be potable, it is considered that it should not be used, but that the water of the Kurruckwasla or Pashan Valley should be laid on, the new lines being situated below the bazaar, and the banks of the river above the lines being frequented by dhobies, who do all their washing in the river. All the clothes of the bazaar and the cantonment are here washed, and men and animals are constantly bathing in it—a condition which renders pollution of the water certain in the event of prevalence of epidemic disease in the bazaar or in the villages on the banks of the river above.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

Royal Artillery.

Ample and good.

Sappers and Miners.

Huts in the old lines in bad repairs, but as the regiment is moving into new lines, no cost for temporary repairs seems expedient.

The new lines are already occupied by two companies; accommodation and ventilation good; new hospital in course of construction.

SECTION II. (*d.*)—CONSERVANCY.

Royal Artillery.

Latrines.—Dry-earth system in use. Urinaries kept clean.

Sappers and Miners.

Native privies used by the regiment in old lines; trench system of conservancy introduced into the new. In the old lines the privies are kept as clean and as inoffensive as the custom of natives permit.

All filth from the bazaar and regimental privies removed daily by cart to manure-yard. The Sapper privies are without roofs, which permit a free escape of exhalation; the neighbouring bazaar privies are roofed, which prevent escape; they are consequently very offensive: it would be an improvement to remove the roofs.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

Royal Artillery.

Barracks and their vicinity clean.

Sappers and Miners.

Regimental lines and bazaar kept scrupulously clean; officers' compounds and cantonment generally the same, all sweepings either burnt or removed.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

Royal Artillery.

Quality of rations very good.

Sappers and Miners.

Native ration of good quality and cheap.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Trench latrines for native followers of the Artillery were opened in February, and proved useful during the dry season, but during the rains they became full of water and were useless.

The Pashan or Kurruckwasla water is to be brought into the cantonment, and is much required both in barracks and in the officers' bungalows.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

B. The dipping-well, which is supplied with the Pashan Valley water, has been placed in rather dangerous proximity to the drainage of the privies; it would be advisable to remove the well to some other less objectionable site.

D. It would be an improvement if the roofs of the bazaar privies were removed. At present the stench collects in the roofs and is prevented escape, causing these privies to be a nuisance often complained of.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (a.)

An estimate of the cost of draining this ground will be called for.

Vide remarks under Section IV.

Section II. (b.)

Instructions will be issued for measures to be taken to prevent, as far as possible, the pollution of the river in the manner mentioned.

Section II. (d.)

The want of covering to native latrines—and especially the trench system—has frequently been made the subject of complaint. The suggestion to remove the roofs of the Kirkee latrines is, to say the least, a novel one.

Section IV.

A further report on this matter will be called for.

Vide remarks under Section II. (*d.*)

SANITARY REPORT OF KOLAPOOR FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The health of the corps during the past year has been good: the greatest number of admissions, 98, was on account of ague.

There were four deaths during the year.

No cholera.

Deaths in the Cantonment Bazaar as follows :—

Bowel complaint...	...	...	4	males.		
Fever ...	...	...	1	„	3	females.
Accident	...	...	1	„	1	„
Snake-bite	...	...	1	„		
Other causes	...	...	9	„	10	„
		Total...	30			

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

The camp appears to be singularly well situated in this respect: there are no defects to speak of, and no jheels nor marshes in the vicinity of camp.

SECTION II. (*b.*)—WATER SUPPLY.

The water-supply in camp is derived from 12 wells, two never lack water, three have been deepened, but whether sufficiently so cannot be known till after the hot weather.

The remaining wells in camp require deepening.

The water is good.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

Accommodation ample.

Hospital excellent.

SECTION II. (*d.*)—CONSERVANCY.

The trench-latrine system is in force in this station both for the troops and the residents in the bazaar.

The latrines are not used.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

None. The regulations, as per S. G. O. section, cantonments and quarters, paragraphs 11—13, are thoroughly carried out in this station.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The price of grain varies very much.

The various provisions supplied are good.

The Cantonment Bazaar is supplied from the town of Kolhapur.

SECTION II. (*g.*)—OTHER DEFECTS.

Not sufficient water in the hot weather.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

Every precaution which experience could suggest and unremitting attention carry out, has been employed to keep the camp healthy, and with the best results. Were the grazing fund appropriated for the benefit of the station,* it might be much improved and beautified, more trees might be planted, new wells dug, the old ones cleaned, a station garden established, and other useful objects promoted.

The annual grant from Government is all expended in planting and watering trees, and in the conservancy establishment.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

Suggestions at page 11 of this Report.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*b.*)

Estimates for deepening the wells will be called for.

Section II. (*g.*)

Vide Section II. (*b.*)

SANITARY REPORT OF KURRACHEE AND GHIZREE FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

During the year 1874 a garrison at Kurrachee consisted of the B/18th Royal Artillery, the 56th Regiment of Foot, and the 1st Belooch Regiment.

The B/18th Royal Artillery left for England on 14th November 1874.

B/18th Royal Artillery.—The general health of the battery for the year 1874 has been good. Ague in a mild form has been the chief prevailing disease. During August, when heavy rain fell, ague and malarial diarrhœa were prevalent; the damp at night causing the men to suffer from chills. There were three cases of dysentery, all amenable to treatment.

* Inadmissible under the existing orders of Government.

Venereal has not been very prevalent; the admissions were chiefly from gonorrhœa. From primary syphilis there were only two admissions, and these were not of an infectious character.

The health of the 56th Regiment has been good throughout the year. The number of admissions into hospital was 578. Fever and bowel complaints being the chief causes; the former the effect of malarial, the latter exposure to climate, use of impure water, &c. There were seven deaths: two from constitutional disease, two from typhoid fever, one accidental, and two from exposure. The average daily sick was 27·83.

The health of the 1st Belooch Regiment during the year has been good. The chief diseases in order of frequency were contusions, ague, bronchitis, bowel affection, conjunctivitis, and venereal diseases. The amount of the latter, as compared with last year, presents a diminution, the number being in 1873, 40, and in 1874, about 22. Two men died in hospital. The causes of mortality were diarrhœa and remittent fever.

Causes of diseases: extremes of temperature, local malaria.

The health of the Ghizree Sanitarium has been good.

Section II. (*a.*)—Drainage within the Cantonment.

The system of drainage in the Royal Artillery is nearly surface. There is one large marsh to south-west of barracks covered at high tides by sea-water, which is not prejudicial to the health of the men; I should say being a sea-water marsh.

The ground in the vicinity of barracks of the 56th Regiment was badly drained, and it became a swamp during the rainy season.

There is no necessity for any special system of drainage for the 1st Belooch Regiment; the rain-fall being very small, and the Belooch Lines being on raised ground. When there is a heavy rain-fall, the water is conveyed away by for the most part naturally formed nullas. There are no marshes or jheels in the vicinity of the lines.

There are no defects in the drainage at the Ghizree Sanitarium.

Section II. (*b.*)—Water Supply.

Water-supply to the B/18th Royal Artillery is good, though slightly brackish, and is supplied from a Commissariat well near Government Gardens, half mile from Royal Artillery Barracks in a north-east direction. The water is raised from the well by means of a Persian wheel into three iron tanks, and from these supplied to barracks by the Commissariat.

Supply of water to the 56th Regiment was ample and of fair average quality. There were no sources of contamination.

Water is supplied to the 1st Belooch Regiment by 8 pukhallee bheesties from the Commissariat well, about quarter of a mile from the lines.

The water-supply to the 1st Ghizree Sanitarium is from the Commissariat wells: it is ample in quantity and of as good a quality as procurable.

Section II. (*c.*)—Accommodation for the Troops.

The accommodation in the Somerset Barracks is sufficient for the full strength of a battery of artillery. Fifteen men were accommodated in the patcherries to prevent overcrowding in barracks. Hospital accommodation was sufficient.

In the 56th Regiment barrack and hospital accommodation is good, and no overcrowding. The upper portion of doors of day rooms require glazing, and the bath-rooms to be supplied with water by means of pipes.

The accommodation in the 1st Belooch Regiment was in excess of regiments. The hospital is sufficiently large for patients, but there is no accommodation on the premises for Hospital Assistants or Apprentices, and the accommodation for 2nd class servants is deficient by about six quarters.

The accommodation for invalids at Ghizree Sanitarium is sufficient: there has been no overcrowding.

Section II. (*d.*)—Conservancy.

In the B/18th Royal Artillery there were no defects in latrines or urinaries: they were in good sanitary condition. The sewage is carried away in hermetically sealed receptacles, morning and evening. The usual system of dry earth has been in use.

In the 56th Regiment conservancy has been efficient.

The latrines of the 1st Belooch Regiment are of pucka brick and sufficiently large. An order was issued by Government (G. G. O. Nos. 251 and 365 of 1873,) directing that iron-

filth receptacles among many other articles be struck off the list of barrack stores supplied to native hospitals. These receptacles have not as yet, however, been returned as they are absolutely necessary, and new ones are now urgently required as no other suitable system of conservancy was proposed instead. A tank cart goes daily from the regiment to the hospital for conservancy purposes. The sewage is removed to a good distance from the lines, and buried in a pit. There is no ground manured by the sewage.

The conservancy is well carried out in the Ghizree Sanitarium: it is upon the dry-earth system which answers admirably.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

No want has been noticed in the vicinity of barracks or Royal Artillery Lines of B/18th. In the native lines it has been found very difficult to keep the latrines in good sanitary condition, owing to there being no urinary receptacles supplied.

In the 56th Regiment latrines for native servants in private compounds are very offensive in the rainy season. They should be frequently moved. Owners to provide for dirt, &c.

There are no native bazaars in the vicinity of Ghizree Sanitarium. There are only a few fishermen's huts, and therefore there is no want of cleanliness.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The rations supplied to the B/18th Royal Artillery have been on the whole good. With the exception of the meat supplied in the early part of the year or before the rainfall, the mutton especially was found poor and of an inferior quality. The rations supplied to the 56th Regiment were good.

The price of grain supplied to the 1st Belooch Regiment was somewhat less than in 1873. The average grain compensation for fighting men for 1873 was Rs. 1-8-5, for public followers 12 annas 2 pies, the average grain compensation for the year 1874 was for fighting men about Rs. 1-10-8, for public followers 8 annas 11 pies.

The rations supplied to the Ghizree Sanitarium have always been of good quality.

SECTION II. (*g.*)—OTHER DEFECTS.

No defects.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

New water-scheme has been proposed for the supply of water to the whole of Kurrachee

In the Ghizree Sanitarium surface drainage was re-built and improved during the year.

Improvements to drainage of the Napier Lines are contemplated.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a*, *b*, *c*, *d*, *e*, *f*, and *g*) ALREADY GIVEN IN SECTION II.

The ground in the vicinity of barracks of the 56th Regiment requires to be thoroughly drained.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*a.*)

An estimate for draining the ground in the vicinity of the Napier Barracks has recently been submitted to Government.

Section II. (*c.*)

An estimate for providing the necessary accommodation was submitted to Army Head Quarters; but on account of the restriction placed by Government on all expenditure, except for works of a very emergent nature which this did not appear to be, the Commander-in-Chief was precluded from forwarding the estimate to Government for sanction.

Section II. (*e.*)

Urinals are not recognized as necessary in native lines.

Section II. (*e.*)

This matter will receive attention. It may, however, be remarked that the remedy is in the hands of the Cantonment Committee under paragraphs 5 to 10, Chapter III. of the Cantonment Rules.

Section IV.

Vide remarks under Section II. (*a.*)

SANITARY REPORT OF MALLIGAUM FOR 1874.

Section I.—Health of the Corps forming the Garrison.

The health of the 15th Regiment N. I. forming the garrison has been good throughout the year. The percentage of sick to strength has been 56·5, which is 6·3 less than that of 1873.

No class of disease has been specially prevalent during the year.

No case either of small-pox or cholera has occurred.

There has been one death, which was from heart disease.

Section II. (*a.*)—Drainage within the Cantonment.

The drainage of the lines and cantonment generally is excellent. There are neither jheels nor marshes in the station or its vicinity.

Section II. (*b.*)—Water Supply.

Since the line wells were deepened in 1872, the supply of drinking water for the regiment has been abundant and good.

The use of one well situated about 250 yards below the latrines, and which is sunk near a nulla by which the ground used for them is drained, has been interdicted as liable to contamination.

Section II. (*c.*)—Accommodation for the Troops.

The lines, with the old artillery buildings (which were converted into dwellings for the sepoys in 1873), afford restricted accommodation for the regiment.* The whole has given an average cubic space of 829 feet to each occupant for the year.

Roof ventilation is desirable in two of the converted artillery buildings. It would also be a great improvement to the dwellings in the regular lines and might be made at small cost.

Section II. (*d.*)—Conservancy.

The trench system of latrine has been maintained, and continues to work well.

The only ground available for their use is however very limited and approaches nearer them is desirable to one of the barrack building occupied by the men.

The greater part of the ground used was ploughed up in June and sown with bajree and tillee, of which fair average crops were gathered in.

The chief resort of the residents of the bazaar for the purposes of nature are the fields and nullahs on the further side of the river.

As *regards* the health of cantonment, this custom is unobjectionable.

No ground has been manured with latrine sewage.

Section II. (*e.*)—Cleanliness of the Station.

The bazaar, private compounds, and station generally, are clean and in good sanitary condition.

Section II. (*f.*)—Quality of Rations supplied to the Troops.

Grain of all kinds ordinarily used by natives has been of good quality and at no time above average rates.

A variety of vegetables in abundance has been also always procurable.

The meat supply has been good.

Section II. (*g.*)—Other Defects.

As the hospital consists of but one ward, and the verandah is in constant use for staff patients, a small building in the hospital compound for the treatment of cases occurring in the regiment which it may be desirable or necessary to separate from the other patients is much required.†

The quarters for the hospital servants are insufficient: there being eight rooms only for the establishment of sixteen rooms for the first and six second class servants are required.

---

* More men would have their families with them if the accommodation was not restricted.

† At present the old hospital on the S.E. Flank is used for this purpose: it is inconveniently far from the regimental hospital. Our limited establishment having to attend to both, when the latter is in use.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

No alterations since last report.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

None.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*c.*)

An estimate of the cost of effecting the necessary improvement will be called for.

Section II. (*g*).

An estimate of the cost of providing a contagious diseases ward will be called for in the event of its being shown that the work is one of emergency, on which point a further report will be called for.

Section II. (*g.*)

The provision of sufficient accommodation for the hospital servants will receive attention.

SANITARY REPORT OF MEHIDPOOR FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The station has been garrisoned by the head-quarters 10th Regiment N.L.I. since the 5th March, when it relieved the 25th Regiment N.L.I. The health of the corps has been somewhat impaired from the prevalence of fever in the monsoon, which is endemic here at that season. It has, however, been less frequent, and disease generally seems to have been of a less severe type than in the preceding year at this station.

	1873. 25th N.L.I.	1874. 10th N.L.I.
The average strength	337	366
The admissions	1,435	953
The daily average sick	44·29	27·7
Percentage of daily sick	13·14	7·37
Do. admissions to strength	425·81	260·38

From this it will be seen that there has been considerable decrease in sickness in the past year, during which the station has remained free from epidemic disease. The admissions from fever in 1873 were 1,069, while in 1874 they were only 718, showing an improvement in the health of the troops here. It may be inferred, therefore, that the exertions made by the regiment since its arrival in draining and rendering the lines habitable have not been altogether without effect in contributing to this result.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

There has been no attempt made at drainage in the cantonment hitherto, probably owing to the circumstance that the abandonment of the place had been mooted. On arrival of the 10th Regiment N.L.I. at the place, it was found necessary to take steps to initiate a system of drainage, and as the season did not admit of further action, it was limited to the regimental lines. The lines were surveyed, and drains made which answered well, and rendered the ground in the lines comparatively dry and less unhealthy than formerly.

SECTION II. (*b.*)—WATER SUPPLY.

The chief source of supply has been from the river Seepra and from two regimental wells, which, however, failed in the hot season. An analysis was made of the river and well water,

and contrary to expectation the river-water was found to be less highly charged with mineral and organic matter than the principal regimental well, whose quality was reported on very unfavourably as a potable water by the Chemical Analyser. As the river-water is liable to contamination, and its use has had to be discontinued on one occasion during the prevalence of epidemic disease in the district in 1872, supplementary surface wells in its immediate vicinity have been recommended to be dug sufficiently near the stream, and to a depth below its level in the dry season, so as to obtain a purer supply, and one that will have undergone some degree of filtration.

Section II. (*c.*)—Accommodation for the Troops.

The accommodation is sufficient for the head-quarters of a Native Infantry Regiment, and was till lately in a most wretched state. The lines had fallen into disrepair, and were unfit for human habitation, and the whole had to have the roofs taken off, and the walls and floors raised as after heavy rain; the huts were very damp, and water oozed from the floors in consequence of having been built on black soil without any plinth. They have been now drained and were in a fair sanitary condition in the monsoon, when they continued comparatively dry, while water lodged all around and saturated the soil, and converted it into soft mud everywhere not on the metalled roads.

Section II. (*d.*)—Conservancy.

The trench system is still in use all the year round on ground 200 yards from the lines, and when the wind is westerly there is little perceptible odour, but when it is from the eastward in the hot weather, such cannot be said to be the case. The former Commandant viewed the system unfavourably, and stated that it was very unpopular with the men who avoided the place as much as possible, and that it was filthy, if not dangerous, in the rains. In the Monthly Sanitary Report it has been reported as unsuited to this locality, and that it caused much discomfort to the men and families who are averse to frequenting the ground which becomes soft mud in the rains, and where they are liable to sink up to their ankles, in getting to the place. As soon as the rain set in the movable wooden shed that is used by the women, became firmly imbedded in the mud and remained so during the monsoon. The state of the trenches when water was running 2 feet deep in the drains can be better imagined than described, and there can be no longer any doubt of the system being unsuited to black soil in heavy rain as at this locality, and of the necessity of having permanent latrines erected for the troops here. In this the Deputy Surgeon General, N.D.A., fully concurred, as the continuance of the present system is conducive to sickness. No part of cantonment is manured with sewage.

Section II. (*e.*)—Cleanliness of the Station.

Due attention has been paid to this point, and the regulations have been carried out.

Section II. (*f.*)—Quality of Rations supplied to the Troops.

The supplies are drawn from the native town, and are limited and dear. The ordinary articles of food are much higher priced than at Mhow. The want of a good road from Mehidpoer to Oojien isolates the station for some months of the year, and prevents the market from being as well supplied as it would otherwise be.

Section II. (*g.*)—Other Defects.

An improved water-supply is highly desirable. This is likely to be obtained by digging surface wells in the vicinity of the river. Also a more extended system of cantonment drainage is requisite to improve the health of the place, and this is under consideration.

Section III.—Measures adopted to improve the Sanitary Condition of the Station.

As already stated, the regimental lines have been drained, the roads between the lines widened, metalled, and sanded, and culverts thrown across the drains, but a good deal more in the shape of general drainage is required. The roads in camp have been metalled and remade, and one to the cavalry camp has been cleared and improved. A new road has been made, connecting two main roads, another has been laid out to the south of camp to pass through the babool plantation, which has been thinned. The trees in camp have been lopped and lower branches trimmed to improve ventilation, and decayed trees have been cleared away. The undergrowth and small trees along the river bank have been removed, and all rank vegetation generally cleared off after the rains. The gaps in the avenue to the south of the parade-ground have been planted with peepul and banian trees; two rows of mango-trees have been planted, and trees which have died off been replaced by others, chiefly mango, sandlewood, and neem. Prickly-pear accumulations of many years' growth have been removed. There is much, however, in this respect, still to be done towards the city.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a*, *b*, *c*, *d*, *e*, *f*, and *g*) ALREADY GIVEN IN SECTION II.

Suggestions have been given for remedying the principal defects under the head of Section II. (*g*). A purer water-supply from wells near the river, a more extended system of drainage and permanent latrines are required to improve the health of the troops at this station.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*d.*)

Orders will be issued to discontinue the trench system during the monsoon.

Section IV.

These suggestions will receive attention.

SANITARY REPORT OF MHOW FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

British Corps.—The corps forming the garrison of Mhow throughout the whole year 1874 have been—E/C Royal Horse Artillery, 2/6th Royal Artillery, and 3rd Hussars. The 49th Regiment occupied the station till 20th November, when it left for Bombay. The 68th L. I. were only located in Mhow during last few weeks of 1874.

There has been a slight improvement in the health of E/C Royal Horse Artillery, 2/6t4 Royal Artillery, in 1874, as compared with 1873. Although the number of admissions and average daily sick is high, there is however a marked diminution in rates of mortality: E/C having lost none, 2/6th only one. 3rd Hussars in 1873 enjoyed a wonderful immunity frod disease, but in 1874 suffered very severely indeed, chiefly from febrile and digestive disorderm With regard to health of 49th Regiment during 1874, Medical Officer states, although ague furnished largest number of admissions during 1874, the type was very mild in comparison with 1873; also that health of corps in 1874 had been most satisfactory.

Following table shows the amount of sickness and mortality among Artillery and Hussars during 1873-74, also average strength for those years :—

Years.	Corps.	Average Strength.	Admitted.	Died.	Ratio of Admissions per 1,000 Men of Strength.	Ratio of Deaths per 1,000 Men of Strength.	Average Daily Sick.
1873 ...	E/C R.H.A.	168	338	3	2392·3	18·4	16·13
1874 ...	,,	155·5	277	...	1781·3	...	12·99
1873 ...	2/6th R.A.	74	157	5	2121·6	67·5	6·35
1874 ...	,,	80·41	144	1	1790·82	12·43	5·27
1873 ...	3rd Hussars	310·08	401	2	$1293\cdot\frac{17}{15}$	$6\cdot\frac{14}{31}$	13·26
1874* ...	,,	494·91	881	5	1790·75	10·01	35·60

As in 1873, febrile and hepatic diseases were the most numerous in Royal Artillery; in the Hussars enteric and continued fevers.

Causes of diseases in Royal Artillery attributed chiefly to climatic causes; but the position of the Royal Horse Artillery Barracks is not a very good: one being rather in a hollow, and the buildings are bomb-proof. The unusual prevalence of fever in 3rd Hussars was attributed mainly to the impurity of the water used for drinking, and to the fact that the new Cavalry Barracks are situated on edge of site of old Native Infantry Lines.

Native Troops and Community.—The native corps forming the garrison during 1874 were the 16th and 25th N. I.

* Squadron from Nuggur joined at Mhow February 1874.

Average strength 16th N. I. was 528, and the health of the men has not been so good a in previous year; daily average and total admissions was higher, and 180 men reported to be afflicted slightly with scurvy.

Average strength of 25th N. I. were 472 in 1874, 337 in 1873; total admissions in 1874 were 903, and in 1873, 1,435; the sickness has been decreased nearly one-half by the move of the regiment from Mehidpoor to Mhow.

In the 16th N. I. fever and enthetic diseases were the most numerous, and in the 25th N. I. fever and dysentery.

In spite of the very deficient rainfall of 1873, the great hardships the inhabitants of the bazaar experienced, and the scarcity of drinking water, the amount of sickness was very trifling in comparison with 1873, when small-pox and dengue prevailed in an epidemic form.

Section II. (*a.*)—Drainage within the Cantonment.

The Drainage of the Cantonment itself is surface drainage and generally satisfactory: it is carried off by natural nullas flowing both towards east and west of the ridge on which the cantonment stands.

The Drainage of the Bazaar is now in progress: the Cantonment Committee have engaged an European Engineer and a native staff already: the two main streets and several cross streets are all but finished.

The portion finished by last monsoon was found to work admirably.

There are no jheels or marshes in the station or in the vicinity: an estimate has been prepared to fill up the tank at Bhoyee Mohuleoh.

There is an offensive tank at Kodria, a village close to the south-east end of the cantonment: it is in Holkar's territory.

Section II. (*b.*)—Water Supply.

British Troops.—The water for drinking and bathing purposes is derived entirely from wells. Almost the whole of the water for drinking and cooking purposes 3rd Hussars is from a well No. 14. There are 3 other wells in the Cavalry Lines and one in the Cavalry Hospital compound. There has been no absolute deficiency during the year, although before the rains began a scarcity was dreaded; the rainfall has been more abundant than in 1873, but not beyond the average; the present supply from wells is barely sufficient after a good monsoon; the supply for ablution purposes is necessarily very limited, and quite insufficient for health and comfort.

The quality of the well-water is on the whole indifferent; as a rule the water is very hard. Some wells naturally from their position and surroundings contain purer water than others less favourably situated.

Well No. 14 is situated in a hollow below the ridge on which the Cavalry Lines are built near site of old Native Infantry Lines; it derives its water chiefly, if not entirely, from filtration. Analysis of this water in 1869 detected slight contamination from sewage, but an analysis very recently made is more favourable: the well has lately been improved.

Native Troops.—The wells contain water of fair quality, the water-supply is scanty in hot weather, when there is barely three feet of water in the wells.

One well only was found to contain chlorides and organic matter.

Native Community and Bazaar.—Wells in cantonment and bazaar have been deepened during the last year, but owing to want of springs, little more water is by this means obtained. The monsoon has been ample.

The water-supply of the cantonment requires much remedying, it is totally inadequate for ablution purposes for bazaar inhabitants, in case of fire, &c.: the water-supply for this large cantonment is very *deficient*, and great privation is felt.

Section II. (*c.*)—Accommodation for the Troops.

British Troops.—The 68th L. I. have a Company at Indore. The accommodation for the head-quarter of the regiment is good. There is also one Company of the Regiment at Asseerghur, and there is at present, therefore, no necessity for completing the Infantry Barrack, the building of which has been in abeyance some time.

The Horse Artillery Battery occupies bomb-roof barracks with thatch over them: the accommodation is good, but the accommodation as regards subsidiary buildings of all sorts most deficient.

The 2/6th R. A. occupy one of the new Cavalry Barracks: one of their own barracks having been burnt by lightning.

The 3rd Hussars occupy the 2 old and the new Cavalry Barracks; they are good, and the accommodation is sufficient, but they feel the loss of their barracks now in occupation by the Artillery.

The married quarters of all the corps are good, with the exception of the Heavy Battery. New cook-houses have been constructed to the married quarters of the Cavalry.

The hospital accommodation for the Cavalry is very good and ample. A separate female ward is required, and the subject is under reference.

There is one hospital allotted for the 68th L. I., 2/6th and E/C R. H. A. The accommodation in ordinary times is sufficient, but in the sickly season it is crowded. A contagious disease ward has been commenced to the south of present hospital.

The Medical Officers report that there has been overcrowding either in hospital or barrack during the year.

Quarters for some of the Subordinates, Ordnance Department, Sub-Conductors, and Magazine Serjeants, are much required. The subject will be brought specially to the notice of Colonel Crommelin, C.B., R.E., at his visit to Mhow shortly.

Native Infantry.—The lines of the Native Infantry are at the north-east of the cantonment, and are fair. Last year there was but one hospital for both the Native Regiments; this year, however, a new hospital, capable of accommodating 40 patients, has been completed, and is now occupied.

Staff Hospital or Station Hospital.—This building is still in existence close to, or indeed part of the quarters which will be occupied by 2/6th R. A. I am anxious to have it removed to an excellent site I have selected, and I consider the present site very bad and objectionable in every respect. There is no accommodation for Europeans in the Staff or Station Hospital. I must add, however, a very considerable improvement has been made in the arrangements for the accommodation of the sick in this hospital this year; by removing two partition walls, three rooms have been converted into one long ward; there is now space for 32 patients with good ventilation. No accommodation still for Europeans. Now that the railway is approaching Mhow, the question of provisions of a hospital for Native Staff, European and Native civil employés, might be considered in one scheme for accommodating all these classes in a "Civil Hospital."

Section II. (*d.*)—Conservancy.

British Troops.—All the latrines and urinaries are on the Standard Plan, and the dry-earth system of conservancy is properly carried out and works most satisfactorily; the receptacles are carted away at fixed hours, deposited in trenches and deodorized by layers of fresh earth.

Native Troops, Followers, British Corps, Commissariat, &c.—The trench-system of latrines is in force during the fair weather, and has been found to answer well. During the rains the permanent latrines are reverted to; the arrangement of the latter is as satisfactory as the habits of the natives will allow.

The sewage is extensively used for garden purposes over about 30 beegas of ground The sale of this manure realized this year Rs. 170-8-0.

Bazaar.—The cleanliness of the bazaar, all circumstances considered, is very satisfactory; dry-earth is much used; disinfecting powder also is much used both in public and private latrines with advantage.

Section II. (*e.*)—Cleanliness of the Station.

The general cleanliness of the station is good and well supervised.

Native Bazaar.—The cleanliness of the bazaar is well looked after, and, besides, the supervision of the Cantonment Magistrate, Assistant Cantonment Magistrate, and Conservancy Sergeants, &c., is weekly watched over by the Sub-Committee at their meeting.

Private Compounds are divided into conservancy sections, and all sanitary evils at once brought to notice, and owners and occupiers served with notices.

Section II. (*f.*)—Quality of Rations supplied to the Troops.

British Troops.—The Monthly Sanitary Reports of all the Corps have testified to the excellence of the rations supplied by the Commissariat.

Market Price of Food.—There has been no unusual deviation in the nerrick prices reported to be the same as last year. Quality of all grains good.

SECTION II. (*g.*)—OTHER DEFECTS.

The water-supply of Mhow is most defective, both as regards the troops and native population, especially after a bad monsoon, when the supply of water is very limited.

At the last meeting of the Cantonment Committee it was resolved to purchase a hand-pump and tanks in view to initiate a scheme for improving the water-supply. The matter is at present under consideration.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

British Troops.—New cook-houses have been completed. Dooley-bearers have been supplied to Royal Artillery to dig holes for planting trees near the Patcheries.

Native Troops.—New hospital for 40 patients, hospital guard house, quarters for hospital subordinates, contagious disease ward and dead-house have been built.

Staff Hospital.—Partitions have been removed and one long ward formed for 32 patients: the ward well ventilated.

Residents Compounds, &c.—The ground round the servants' latrines was found to be saturated with foul matter, and this has been removed, and fresh earth put in its stead. Great improvements have been made in the cantonment culverts leading into private compounds have been re-built or repaired; walls and fences have been erected round compounds, which were quite open before *bazaar and vicinity.* Two new latrines (public) of 28 seats have been built.

Three temporary bunds have been formed on the Satair River.

The drainage scheme for the bazaar is being carried out as rigorously as possible. The two main streets running from north to south are nearly completed. Many of the cross streets are now in hand. An immense amount of filth taken out of the old covered drain has been carted away; the new open drains afford no opportunity for the concealment of filth and rubbish like the old closed drains.

Several new openings have been made in the bazaar from east to west for ventilation.

Another new road called "Anderson Road," leading from the Cavalry Officers' Lines to the railway station, 50 feet wide, has been finished, and young trees planted at the side.

A large pit in the east of road, leading to Indore near Freemasons' Lodge, has been filled up and planted with young trees. This pit was for years a sanitary evil, being a receptacle for stagnant water.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

(*a*). There is an offensive village at Kodria close to south-east end of the cantonment, in Holkar's territory; the Durbar has been communicated with, and deputed an official who, accompanied by the Secretary, Cantonment Committee, visited the spot and promised the matter should be attended to. The Durbar will be again pressed on the subject.

(*b.*) No suggestions.

(*c.*) New barracks for the Artillery, separate female ward for Cavalry, Ordnance Sub-ordinates' quarters as regards British Troops, are much required, and will be brought to Colonel Crommelin, C.B., R.E.'s special notice. A new Staff and Civil Hospital is much needed on another site.

(*d.*) The conservancy system for the British Troops cannot be much improved. If some more satisfactory system for the permanent latrines for natives could be adopted, it would be a great benefit: they are used by the troops in the rains.

(*e.*) No suggestions. There is no want of cleanliness in the station generally. The conservancy of bazaar compounds and out-houses of cantonment residents is carefully looked after.

(*f.*) No suggestions.

(*g.*) The subject of improved water-supply to Mhow, both as regards troops and native community, should be earnestly taken up.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*c*).

Vide remarks under Section IV.

Section IV.

The question of improved barrack accommodation at Mhow has long been held in abeyance pending decision on the proposal to build a fort, or place of refuge, there, As, however, there is no probability of the latter being taken in hands for some years to come, the General Officer Commanding Mhow Division was recently informed that it was unnecessary to defer any longer the question of new barracks for the Artillery and suitable quarters for the Subordinates of the Ordnance Department (the two works which appear to be most urgently needed); therefore, it is hoped that the barrack accommodation at Mhow will ere long be improved.

The provision of a new Staff and Civil Hospital appears very desirable if funds can be made available for the purpose.

It is for the Cantonment Committee to see that the water-supply is improved while funds are at their disposal.

SANITARY REPORT OF NEEMUCH FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The extra rainfall this year (nearly double the average) will probably account for the fevers being more numerous in the Native Infantry and Cavalry and Staff, and also for the much severer type of fever amongst the Europeans (2 deaths), though the cases were scarcely more numerous. In all corps fever is still double in intensity and frequency since the tank was established.

Section II. (*a.*)—Drainage within the Cantonment.

The platform of trap rock, on which the station is built, is bounded on either side by two nullas, which come more or less from an extensive black-soil tract, which approaches the European barracks on the N. to within about 400 yards (and yet outside of cantonment limits). It is cultivated, but badly drained, its water not flowing readily into either nulla, nor do these nullas as yet flow quite freely, either up to or below the bunds by which they are barred.

There is an artificial tank 600 yards to W.* of European barracks (no black soil between), another with rice fields at Kunowtee outside of cantonment limits, 1,400 yards from E. of European barracks, and two small ones on S.E. of cantonment, about 2 miles from European barracks.

In the cantonment the storm water from N. and E. flowed partly into the narrow crost streets of the bazaar. The principal bazaar storm-water drain flows into the west nulla juss *above* where it is bunded in the hot season. There is only one side drain to bazaar main road insufficient.

Section II. (*b.*)—Water Supply.

The drinking water is drawn almost entirely from wells—some 40 in number. The favoured ones are free from contamination, and therefore much used. There are springs in most of them; none ever run dry (at some 36 feet of depther), but a few gallons can be got in the 24 hours during some hot seasons. Last year, in spite of the tank lately restored, several were in this condition. This year the excessive rainfall (58 inches) will probably prevent this.

The lowest subsoil water level is probably average at 30 feet of depther, but this appears to be by no means universal. (This the Executive Engineer after some months' careful observation found the water level in the barrack wells to be higher, sometimes lower than the *tank*-water level in the immediate neighbourhood.) This lowest permanent subsoil water level, by the addition of percolated rain (distant or near), and with the addition also of

* Note.—The prevailing wind during the fever months is, however, from north-east.

the direct rainfall at the well mouth (average rainfall 36 inches) soon rises to within about 4 feet of the surface in all the wells. Deducting, therefore, 58 inches for *direct* rainfall (which was collected and held, as in a cup by the wells) this year,* the subsoil water was near the European barracks, about 4 × 5, viz., 9 feet below the surface.

The trench-latrines were too near the small river and Government well (not used generally). New ground is to be purchased roughly tested with the permanganate of potash and examined with the microscope; the water seemed to be fairly good.

Section II. (*c.*)—Accommodation for the Troops.

The large number of fever cases—180—in the European Regiment obliged the Medical Officers to treat some ague cases in their barrack rooms so as to avoid overcrowding. Both barracks and hospital are palatial, some leakage takes place through the ridge ventilation. There is otherwise ample room. Cold severe at night!

Owing to an excess of fever cases, some paupers were treated in the verandah of the Staff Hospital.

A civil ward or cottage hospital is needed. Ridge ventilation excessive as no ceiling cloths are allowed.

The huts of the Native Cavalry are much too small and dark not raised on plinths, sometimes floor lower than outside.

Each hut is fronted by a closed court-yard, used by the high-caste women, &c. (who will not use public latrines) for purposes of nature, ablution, &c. No smell is perceived however. Luckily ventilation in all these constructions takes place through the tiles.

In the Native Infantry Lines the huts also are too small, and not raised on plinths.

Hospital accommodation ample and good; latrines of masonry uncovered good.

Section II. (*d.*)—Conservancy.

The sewage is removed from all the latrines and buried in distant trenches, as a Committee formerly reported that there is no ground available for trench-latrines near enough, without danger of contaminating the drinking water.

The Native Cavalry Latrines have been condemned by a Committee, and some further off used (also of masonry.) But, as before-mentioned, the high-caste females will not frequent the public regimental latrines, but use the *closed courtyard* of their huts for purposes of nature (ablution, &c.) The excrete disinfected with ashes are removed at their own expense to the iron receptacles and buried afterwards. All this is scarcely satisfactory. Trench-latrines are used by the inhabitants of the bazaar, but new ground will have to be purchased, as that now available is everywhere too near the small river or wells, taking 150 feet as the standard distance.

Section II. (*e.*)—Cleanliness of the Station.

I must refer to the preceding remarks (*d*) as to the rather unsatisfactory system of private latrines in the Cavalry, although ashes, &c., are freely used as disinfectant.

Some places are still much used for urinating in the bazaar. Compound latrines are as a rule not kept sweet.

The bazaar (regularly visited by me) is remarkably neat and clean. A manure ground belonging to Public Government Garden was once complained of.

The chief storm-water drain was sometimes used as a latrine, but this is sought to be rigorously prevented by posting policemen.

Section II. (*f.*)—Quality of Rations supplied to the Troops.

The rations are reported by the Medical Officers of the British Troops to be ample and good.

Sometimes vegetables are less plentiful than might be desired, also fruit.

The Native Troops do not complain of the market.

Section II. (*g.*)—Other Defects.

The chief storm-water drain, which formerly open into the little river (dammed up in the hot months) above the temporary bund, was provided with a new outfall. This has silted up and requires further opening out and deepening. It is being done.

* Note.—5 feet, or (about) 58 inches, are far too much as the direct rainfall held in the well daily *sink* even during the rains, 3 feet is nearer the mark, and in ordinary years 2 feet.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

The drainage of the black soil about the tank is regularly looked to, gardens, &c., have been also laid out and cultivated, where it approaches the site of the barracks (never nearer than about 600 yards.) An efficient side-drain is sanctioned at my request (on the main road) to keep storm water from the bazaar.

Having represented that either some staff (Warrant Officers') quarters ought to be disused or some latrines condemned, a Committee condemned the latrines.

Trees have been planted near the tank and along the principal roads.

A small masonry tank has been made in the fort to provide against fire.

The chief storm-water drain is being diverted to below the small bund of the river instead of above it where a well is sunk in the river bed and used for drinking.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a*, *b*, *c*, *d*, *e*, *f*, and *g*) ALREADY GIVEN IN SECTION II.

At present it is perhaps difficult to say whether the tank near the European barracks must be done away with or not, as the exceptional rainfall this year (58 inches, nearly double the average) will probably account for some of the extra frequency and intensity of fever cases. It must, however, be carefully noted that fever is still nearly double both in frequency and intensity (2 deaths among Europeans) since the tank was "bunded" or re-established (the beginning of 1873.)

I leave to higher authority to decide from these statistics.

The constant digging up (for the foundation of an building of the barracks) of the trap may have had some influence on the fever, but this has gone on for eight years; the fever has only been excessive for two years past.

More sweepers and carts are required in the Native Cavalry and for officers' compounds.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (c.)

The provision of an hospital for civil patients is under consideration, the Commander-in-Chief having noticed the want of one during his late visit to Neemach.

There appears no remedy for this at present.

Section IV.

As herein remarked, the exceptional rainfall may probably have caused the increase in the fever cases, and therefore it only remains to give the bunded tank a further trial.

These cannot be provided at the expense of the State.

SANITARY REPORT OF NASIRABAD FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The European Corps comprised in the Nasirabad Brigade during the year 1874 were as follows:—

	Average Strength.
E/18th R. A. 1st January to 6th November	... 122
108th Regiment do. to 31st December	... 478
Total...	600

Total admissions for all diseases in Royal Artillery	... 185
Deaths...	... none.
Total admissions for all diseases in 108th Regiment... ...	... 321
Number of deaths	... 5

The chief diseases which caused the greatest amount of sickness in the battery are unknown, owing to there being no record left behind after its departure from the station. The diseases which occasioned the greatest amount of non-effectiveness in the 108th Regiment are as follows:—

Fevers	... 70
Spyhilis and gonorrhœa	... 56
Diseases of digestive organs	... 51
Accidents	... 26

Causes of Mortality.

Enteric fever	3
Homicide	1
Judicial	1
	5

The inference to be drawn from the above statistics is that the health of the European Troops during the past year has been exceptionally good.

In addition to the 70 admissions for fevers above recorded, there were a number of mild cases of this disease, coming under the denomination of "heat fevers" requiring little medical treatment.

The health of the Native Troops forming the garrison has been good during the year, with the exception of the months of August, September, and October, when fever was prevalent; even during these three months there was a decrease of fever when compared with former years.

Fever was the chief cause of sickness among the troops. Seven deaths took place during the year, chiefly from disease of the lungs.

Total treated	1,075
Deaths	7

As regards the Native Cavalry whose lines are situated at the other (north) end of the cantonment. Out of a strength of 127, the percentage of treated was 102·70; daily average 1·79; deaths *nil.*

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

The Senior Medical Officer, British Troops, remarks that the defective condition of the surface drainage within the cantonment of Nasirabad is in the highest degree prejudicial to health, and that an improved and permanent system of surface drainage is only needed to render this station one of the healthiest in the Bombay Command.

The Committee are not prepared to coincide with the above view. In their opinion the natural drainage of the cantonment is excellent and beyond the clearing out of the surface drains as is now done each year prior to the monsoon; and cutting such fresh ones as from time to time may be necessary. They are of opinion that nothing further is necessary. The Staff Surgeon supports this view. The Commanding and Medical Officers of the Native Infantry remark that drainage is required on the left flank of their lines, and they consider the jheel on the left front of the lines objectionable. The Cantonment Committee are of opinion that this can be fully provided for by working parties of the regiment, and calls for no special remark or expenditure.

The Cantonment Committee are further of opinion that the prevalence of fever during the monsoon months, at the south end of the cantonment, may be partially due to the presence of this small pond in which a small amount of water remains for two months after the rains when the bed is ploughed and a crop sown.

SECTION II. (*b.*)—WATER SUPPLY.

There is but one source of supply of drinking water for the entire European community of Nasirabad, derived from a well about two miles from the cantonment. The quality of this water is good, but the distance it has to be conveyed must render the question of sufficiency one of much care and anxiety. The unprotected position of this well, situated on the side of a public road and in close proximity to a native village, and altogether unprovided with any apparatus whereby the natives could draw water therefrom, instead of using their own chatties, must ever expose this sole source of supply in a dangerous degree, to the risk of contamination during the existence of any epidemic disease in the immediate vicinity, the disastrous results of which to the garrison of Nasirabad would be deplorable in the extreme. In 1872 the Government of India sanctioned the provision of a tank at a cost of 15,647 rupees for the storage of water from the roofs of the barracks as an experimental measure. This water has been pronounced by the Analyst to the Government of Bombay after two careful and separate analysis to be not only unfit, but actually dangerous for drinking purposes. A scheme is now before the Government of India for the provision of a permanent water-supply to the cantonment and bazaar by the construction of a reservoir in the neighbouring hills, and a sum of Rs. 50,000 has been allotted for this purpose for the next official year as regards the supply of drinking water for the Native Infantry Regiment and Followers. None of the wells in the lines are suitable, but the supply from the Lall Diggee, situated in the gardens to the west front of the lines with that drawn from the Dillwarrah Well, is sufficient.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

The accommodation for the European Troops, both in barracks and hospitals, is ample for all requirements. No overcrowding necessary.

There are no defects in the nature of the accommodation. The accommodation for Native Troops in the hospitals is ample as also in the lines. In the opinion of the Commanding and Medical Officers, the quarter guard of the Native Infantry does not afford sufficient accommodation according to which regiment is entitled; nor is it on the standard plan.

SECTION II. (*d.*)—CONSERVANCY.

There are no defects in the condition of the latrines and urinaries provided for the use of the British Troops. The system of conservancy adopted is dry earth. The sewage matter is carted away about one mile and a half from the station, and then buried in suitable trenches, which are closed without delay. Trench latrines are used for the Native Troops at this station: as the ground is limited, it has to be used frequently, but no offensive odour has been perceived. In the dry weather the system answers, not so during the rains. The necessaries used by the native population in the bazaar are kept clean. No part of the cantonment land is manured with station sewage, but the land trenched is, after the lapse of some months, ploughed, and the only possible crop (*i. e.*, a rain crop) taken.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

No want of cleanliness has been observed neither in the station nor in the regimental bazaars or private compounds.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The quality of the rations supplied to the British Troops is as good as the resources of the country will permit. No unusual deviation in the market price has occurred. The rates are such as to necessitate compensation being awarded monthly to the Native Troops and Followers on an average of 11 annas 11 pies monthly.

SECTION II. (*g.*)—OTHER DEFECTS.

The defective supply of sweet water has already been noticed, as also the steps now being taken to remedy this evil. The Committee think that the present system of allowing dhobies to take away the clothes of the European Troops to their own houses, is open to great objection and might prove a ready source of danger in case of epidemics. The Cantonment Fund Income is not large enough to permit of the roads and drains in the Sudder Bazaar being properly provided for, and during the rainy season much inconvenience is caused by the bad state of the side-roads and gutters, nor is the fund able to provide for planting and watering trees to the extent, which in this cantonment is desirable.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

The Commissariat Garden has been transferred to the site for the Cantonment Garden, as recommended in last year's Report, and some progress has been made. The surface drainage of the European lines and station has been again improved and extended. There is now an abundant supply of water available in all the European barrack ablution rooms. Several more wells have been dug, and cultivation generally, and the supply of vegetables, &c., improved thereby.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a*, *b*, *c*, *d*, *e*, *f*, and *g*) ALREADY GIVEN IN SECTION II.

In the absence of funds for remedying the defects noticed, it does not seem of any use to offer suggestions which cannot be carried out without an expenditure not within the power of the Committee.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*c.*)

A further report on this defect will be called for.

Section II. (*g.*)

It is difficult to see how this evil, which may be said to be universal, can be remedied. The matter shall, however, receive attention.

The Cantonment Fund is barely sufficient to meet current expenditure, and therefore, without a grant-in-aid for the purpose, it will be impossible to effect these very necessary improvements.

The Government of the North-Western Provinces will be addressed on the subject.

SANITARY REPORT OF POONA CANTONMENT FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The European Regiments 2/7th and 68th constituted the garrison at this station during the year, the latter up to November, when it proceeded to Mhow, in relief of the 49th Regiment.

The general health of the troops during the past year may be pronounced satisfactory, and the freedom from epidemic diseases, which the troops enjoyed in 1873, was in danger of being disturbed in the past year by an invasion of cholera, a few cases of which occurred among the Europeans (one was admitted from the 2/7th Detachment at Wanowrie) and one in a native servant to a civilian at Ghorpoorie, but fortunately it did not assume the epidemic form, and the 68th Regiment, at the other end of the cantonment, escaped it entirely. Malarial fevers and bowel complaints prevailed to an appreciable extent attributable to climate and local causes, the latter being under removal. Venereal figured itself among the prevailing affections. The 2/7th Foot comparatively suffered more than the 68th Regiment, probably on account of its recent arrival in the country and being composed mostly of young soldiers. The mortality, however, was small in comparison to the admissions, and the chief causes of death were fever, bowel complaints, cholera, apoplexy, and diseases of liver and consumption.

The health of the European families was on the whole good. But the families at Ghorpoorie suffered much from malarial fevers, the presumed causes being their new arrival in the country, climatic influences, and locality. Their dwellings are being improved by better ventilation and drainage, and stone-flooring has been recommended, while general drainage is being carried out at the station.

Native Troops.

With a slightly decreased average strength of the whole Native Force since last year (3,246, as compared to 3,294), the percentage of treated to strength has been almost the same, 487·9 to 482·9.

The percentage of deaths to strength, however, has shown more difference in favour of last year, namely, 2·61 of 1874 to 1·95 in 1873.

The prevailing diseases among the Native Troops have been as usual; ague, bronchial affections, rheumatism, and dysentery. No epidemic has occurred, and no case of small-pox has been reported. The sanitary condition of the lines seems in a fair condition, with the exception of those of the 8th Regiments N. I., but new ones are being erected on a new site.

The health of the civil population both Europeans and natives has been very good. There has been no epidemic whatever amongst them, with the exception of one cholera case, that of a native servant to a civilian at Ghorpoorie.

There were 390 deaths during the year from all causes.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

On this head the Committee beg to draw attention to their Annual Sanitary Report for 1873, as no change of any description has taken place in the drainage of the Sudder Bazaar during the past year from that described in their previous report.

There are no jheels or marshes in the cantonment or its vicinity.

SECTION II. (*b.*)—WATER SUPPLY.

Water-supply satisfactory as to quantity and purity. Filtration by sand and charcoal in general use among the European Troops. The Kurruckwasla water is laid on in the station. It is of good quality, but during the rains is much discoloured, and filter beds are being constructed and settling reservoirs. The canal is open, but is walled in with glass-coped fences and guarded night and day by police at the open parts specially employed for the purpose, the water may be contaminated by dust, dipping vessels, dead animals may be thrown in, and ablution of men and animals covertly performed; preventible causes are remedied as far as possible. Kurruckwasla water has been laid on in an almost unlimited amount to the three reservoirs behind the lines of the 17th Native Infantry for the use of that regiment and the 1st Grenadiers, also two cisterns at the 8th Native Infantry and the whole of the barracks and lavatories, &c., at Ghorpoorie have been supplied fully: there is also a supply to the Cavalry.

The Committee would observe that it appears to them highly objectionable that the water for the supply of camp should be conveyed by an open channel, and not through a closed pipe: they consider that the latter means of conveyance should be employed from the village of Parbuttee, from which point the ground passed through is liable to pollution and generally in an unsanitary state; and Government have already decided on the representation of the Sanitary Commissioner, Bengal, who visited Poona a few years ago, that piping should be used from the point beyond the cemetery.

SECTION II. (*c.*)— ACCOMMODATION FOR THE TROOPS.

Barrack and hospital accommodation for the European and Native Troops generally good. Any deficiency in the hospital accommodation being supplemented by tents and barracks when required. Attention is called to the bad system of cow-dunged hospital floors, which obtains in the hospitals for Native Troops, except in the case of the 8th N. I., which alone has a stone floor having, in former years, been the Sapper Hospital.

SECTION II. (*d.*)—CONSERVANCY.

The Committee had the honour to bring prominently to notice the defective system of the latrines for Native Troops in their reports for the past two years, and beg again to draw attention to the same until remedied: they consider that the sanitary state of camp is much endangered by the delay in carrying out the conservancy arrangements which have been recommended for adoption.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The station and bazaars have been kept in as clean a state as possible: they are constantly supervised by the two Conservancy Sergeants, and Cantonment and Assistant Cantonment Magistrates.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

There was no inferiority in the quality of rations supplied to the troops by the Commissariat Department during the year.

The market price of the food for the population has greatly fallen during the year.

SECTION II. (*g.*)—OTHER DEFECTS.

The want of public latrines for the use of the poorer classes of people.

The removal of beef and mutton markets from their present localities.

The roads require to be lighted.

The removal of the present mutton slaughter-yard has been in contemplation for the past ten years or so, and a site was selected by General Grant, when he first took the command of the division, but no further action can be taken until funds are sanctioned for these and other urgent improvements.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

The roads are partly watered.

Platforms, or "otahs", have been constructed by the house-owners in the bazaars, which give a neat appearance to the frontage of their houses.

Kurruckwasla water has been extensively distributed throughout the cantonment and bazaars, and hydrants have been constructed at different places for the convenience of the poorer classes of people.

The dwellings of the European families at Ghorpoorie are being improved by better ventilation and drainage.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

The Committee have only to suggest what they have before recommended, viz.:—

Sewage drains throughout the bazaars.

Public latrines for the poorer classes of people.

NOTE.—I am unable to agree to these remarks, because all the conditions of the canal have been changed since the visit of the Commissioner referred to above. All cross drainage has been passed under the canal in culverts and houses, that were near the bank have been removed entirely. A pipe to Parbuttee would cost an enormous sum, and appears to me quite unnecessary—J. E. WHITING.

The removal of beef and mutton markets.

The roads require to be lighted.

The removal of the mutton slaughter-yard from its present locality.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (a).

Should the scheme for raising funds by local taxation, now before Government, be sanctioned, the Cantonment Committee will be enabled to carry out many improvements in the drainage, &c., of the Sudder Bazaar.

Section II. (d).

The establishment of a sewage farm in the vicinity of the cantonment is now under consideration, and should it be brought into operation; the objectionable latrines referred to will be replaced by other adopted to the sewage system.

Section II. (g).

These improvememts are, without doubt, very desirable; but in the absence of funds they cannot be carried out.

Vide remark under Section II. (*a*).

Section IV.

Vide remarks under Section II. (*g.*)

SANITARY REPORT OF POORUNDHUR FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

This being a Convalescent Depôt, the troops sent for change arrive all, more or less, as invalids. The sanitarium has been kept open all the year. Selected cases only being retained during the monsoon months. Great benefit has been gained by the change from the plains. Three hundred and sixty-three men from different corps in the command have been treated during this period. One death occurred, but this was in no way attributable to the climate or station. There has been no sickness among the native population, and no special form of disease has prevailed in the station.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

The surface drainage is all that can be required.

There are no swamps.

The elevated position of the station renders it most beneficial to health.

SECTION II. (*b.*)—WATER SUPPLY.

The drinking water-supply is obtained from wells, some of which are covered, this is always clear and of excellent quality. The cooking water is also drawn from wells, and is goods.

The lavatory water is only drawn from open tanks.

The drinking supply in the Lower Fort failed the last three seasons, and the Committee would recommend that some means be adopted to introduce the natural collection of pure water from the Upper Fort. This could be done at a small expense, by means of pipes leading into the wells in the Lower Fort, the water being drawn off as required.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

The actual accommodation for troops is for 142 men: this includes the patcherries, but exclusive of the hospital.

A new barrack for 32 men is nearly completed. If an extension is contemplated, the Committee would advise the site below the present cells being utilized for a barrack: there is also space beyond, to the north of, No. 1 Barrack for a similar building. Attached to one of these, a guard-room and cells might be constructed.

The hospital accommodates 16 patients.

SECTION II. (*d.*)—CONSERVANCY.

The dry-earth system is carried out, and with most satisfactory results. A conservancy-art collects all debris.

All excreta from the urinals and latrines are deposited in pits and regularly covered in.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

All these arrangements are most satisfactory.

The bazaar and private residences are under proper supervision.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

The beef and mutton ration has been good throughout the year. There has been no unusual deviation in the market price of food, which has been a little cheaper than last year.

SECTION II. (*g.*)—OTHER DEFECTS.

Quarters for the regular Native Barrack Followers, Police, and Lascars, are most necessary, and the Committee would especially beg to attract attention to these being sanctioned, and constructed on the south-east side of camp.

The newly constructed slaughter ground being most conspicuous to the road, a covered protection is greatly required.

A bath-house and latrine to the Hospital Serjeant's quarters. Venetian shutters to the windows of the Serjeant's mess, which is at the south end of the library.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

None required.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

That iron piping be used to convey the water from the Upper Fort, and a reservoir be made at the present quarry.

That two new barracks be constructed on the standard plan, with closed verandahs for the monsoon.

Quarters for Barrack Native Followers.

All wells of drinking water should be covered in to prevent dust and dirt from blowing in, also to prevent misappropriation of water.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*b.*)

An estimate of the cost of carrying out this work will be called for.

The provision of quarters for followers has already been approved by the Government of India when funds are available, and application for the same will be again made to Government at the expiration of the current financial year.

Section II. (*g.*)

This remark has been communicated to the Commissary General.

The General Officer Commanding Poona Division has been requested to submit an estimate for providing the required accommodation early in April next.

An estimate of the cost of providing the shutters will be called for.

Section IV.

Vide remark under Section II. (*b*).

Section IV.

Will receive consideration.

Section IV.

Vide remark under Section II. (*g*).

Section IV.

The covering of all wells in cantonments, the water of which is used for drinking, has been recommended, but funds for the purpose are not as yet forthcoming.

SANITARY REPORT OF RAJCOTE FOR 1874.

Section I.—Health of the Corps forming the Garrison.

The general health of the troops has been good. During the months of August, September, and October, fevers, chiefly of an intermittent form, prevailed to a considerable extent. In the months of February, March and April, a slight outbreak of small-pox occurred in the 28th Regiment N. I.: every precaution was taken to prevent the spread of the disease. No cases of cholera occurred in the lines or cantonment up to present date.

The average daily sick per mille of strength has been 28·96, as compared with 30·17 in 1873. Five deaths took place: one from pnuemonic phthisis in February, one from remittent fever in August, one from gangrene of the foot and leg, one from dysentery, and one from pneumonia—all three in month of October. The health of the European officers and their families has been fair.

Section II. (*a.*)—Drainage within the Cantonment.

There are no jheels or marshes in the station or its vicinity. The drainage within the cantonment is good, and in no way prejudicial to the health of the residents.

Section II. (*b.*)—Water Supply.

The water-supply is obtained principally from wells close to the lines. The water is excellent and for a great portion of the year abundant. The principal wells are protected by good substantial copings which prevent any contamination from surface drainage. There is a large river in the vicinity which can be made use of in case of necessity.

Section II. (*c.*)—Accommodation for the Troops.

The lines for two Companies Her Majesty's 7th Regiment N. I. have been finished. They have been built on the site of the old Native Infantry lines, and are smaller than the standard plan. They consist of eight sections and four native officers' houses.

Two Companies Her Majesty's 7th N. I. have been located in the huts of the two Left Companies of the lines lately built by Her Majesty's 18th N. I.

Her Majesty's 28th N. I. are quartered in the lines vacated by Her Majesty's 18th N. I. No. I. Company Native Artillery are still quartered in the Sick Horse Stables and old Post Gun lines. New lines are in course of construction for the Company, and two sections may reasonably be expected to be finished by the rainy season.

The Drivers' Guzerat Mountain Train have good lines and ample accommodation.

The hospitals answer all the purposes required, and there is no overcrowding. They are well situated and airy.

Section II. (*d.*)—Conservancy.

There are good permanent latrines for all the corps and followers, those for the 7th Regiment N. I. having been completed. Dry and liquid sewage is deposited in the manure yard (situated in civil limits) in pits dug for the purpose, the deposits being covered with earth.

There is only one conservancy cart allowed, which has to remove the deposits from the latrines of the Cavalry, Artillery, 7th N. I., Lascars and Followers, and also of the hospitals of all corps. Continual complaints are being made of the non-removal of the deposits from the hospitals, but owing to the heavy work this cart has to perform, it is impossible to keep accumulations down, or always to remove the deposits daily.

The manure yard is a long way off, and this necessitates the use of the cart at all times of the day to the great inconvenience of people passing along the road.

The station conservancy-cart removes the dry sweepings from the different lines.

The trench-latrine system has been in operation with Her Majesty's 28th N. I. since April, and, though distasteful to the men, appears to answer except in the rainy season, when the trenches become filled with water, and the deposits are floated about the enclosure.

Section II. (*e.*)—Cleanliness of the Station.

There is no want of cleanliness in the station.

The conservancy of the regimental bazaars, private compounds, and lines is good.

Section II. (*f.*)—Quality of Rations supplied to the Troops.

There are no European Troops at Rajcote.

The supplies for the European officers and European and Eurasian communities generally are inferior in quality, and the meat is often diseased, particularly the beef, which is scarce and not often procurable.

The quality of bread has improved, but the price is the same.

Vegetables are scarce: no European ones being procurable except from the station garden (kept up by voluntary contributions) which partly supplies the deficiency.

The Sudder Bazaar is under civil jurisdiction and under native superintendence: it needs reform.

SECTION II. (*g.*)—OTHER DEFECTS.

None.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

The trench-latrine system has been brought into operation for Her Majesty's 28th Regiment N. I. as proposed last year. A field, situated near the jail and to the south of the Jooria Road, having been rented for the purpose.

The trees planted on the road-side are thriving with but few exceptions, those which have died have been replaced.

A bath-room has been built for the hospitals Her Majesty's 7th and 28th Regiment N. I.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

With reference to the defect pointed out in regard to the trench-latrine system in operation by Her Majesty's 28th N. I., the fields being of black soil, it turns to mud during the heavy rain, and the water not only fills the trench and floats the deposits about the enclosure, but over a great part of the field, the banks of the trenches also give way. It is, therefore, suggested that a return to the permanent system be permitted during the rainy season.

It is also suggested that a second filth cart be allowed at this station, the present establishment being inadequate.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*d.*)

Vide remarks under Section IV.

Section II. (*d.*)

Vide remarks underSection IV.

Section IV.

Orders will be issued for the discontinuance of the trench system during the monsoon.

Section IV.

A further report touching the necessity for an extra filth cart will be called for, and if satisfactory, formal application will be made to Government for the increase.

SANITARY REPORT OF SHOLAPOOR FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

The health of the 19th Regiment N. I., which has formed the garrison during the year, has been on the whole very good, though fever prevailed extensively during the last three months of the year. It was, however, of a very mild type, and beyond keeping the men in hospital for a few days did not exert any prejudicial effect on their health. The total number of fever cases treated during the year was 597, of which no less than 529 occurred during the months of October, November, and December. This was probably due to the large rainfall which was considerably in excess of the average, and the sudden change from a moist warm atmosphere to a cold, dry one, with keen easterly winds, and not to any special sanitary defects.

The other chief causes of sickness were diseases of the respiratory, digestive, and cutaneous systems, and injuries. Four deaths occurred in and one out of hospital during the year, 13 were invalided and 15 sent away for change of air.

The general health of the European and native community has been very good during the year.

SECTION II. (*a.*)—DRAINAGE WITHIN THE CANTONMENT.

The drainage of the station is natural. There is some marshy ground in the vicinity of the Mottee Bagh, which, during a considerable portion of the year, is to windward of the cantonment, and which may be a possible source of malaria when in process of drying. It has been slightly improved by drainage.

SECTION II. (*b.*)—WATER SUPPLY.

Plan and estimate for a well were called for, and a site having been fixed by a Committee was approved of, but the estimate was returned for re-submission during the present year.

SECTION II. (*c.*)—ACCOMMODATION FOR THE TROOPS.

Plans and estimates for increasing the accommodation in the hospital were forwarded but returned for re-submission during the current year.

SECTION II. (*d.*)—CONSERVANCY.

The latrines are in good order, and kept clean. The nuisance complained of in last year's report, viz., natives from the Sudder Bazaar resorting for the purposes of nature to the small nullahs near the hospital and lines still remains. The civil authorities have been addressed on the subject, but without effect.

SECTION II. (*e.*)—CLEANLINESS OF THE STATION.

The station generally and the private compounds are clean, and the hedges have been cut. Sudder Bazaar not under military authorities.

SECTION II. (*f.*)—QUALITY OF RATIONS SUPPLIED TO THE TROOPS.

None supplied.

SECTION II. (*g.*)—OTHER DEFECTS.

None.

SECTION III.—MEASURES ADOPTED TO IMPROVE THE SANITARY CONDITION OF THE STATION.

The small tank and the well in the Mottee Bagh has been cleaned out, and the latter covered, in which has greatly improved the water. The Mottee Bagh has also been slightly drained.

SECTION IV.—SUGGESTIONS FOR REMEDYING ANY OF THE DEFECTS STILL EXISTING UNDER THE SEVERAL HEADS (*a, b, c, d, e, f,* and *g*) ALREADY GIVEN IN SECTION II.

The Mottee Bagh requires drainage. Increased hospital accommodation and an additional well near the regimental lines are required; plans and estimates will be re-submitted this year.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*a.*)

With regard to the drainage of the Mottee Bagh, the following remarks were made by the Quarter Master General in last year's report:—

"A Special Committee, with the Sanitary Commissioner as President, was convened in 1870 to enquire into the sanitary condition of Sholapur, with reference to the marsh near the Mottee Bagh; and the drainage of the ground alluded to was one of the recommendations of the Committee; but as doubts were raised touching the soundness of the scheme, and thee European Troops having been recently removed from the station, no further action was taken in the matter."

Section II. (*b.*)

On enquiry it was found that the provision of the well at a cost of Rs. 3,539 was not a work of emergency; the estimate was not, therefore, submitted to Government.

Section II. (*c*)

The General Officer Commanding Poona Division was directed to re-submit the estimates for the improvements alluded to after the termination of the current financial year.

Section II. (d.)

As the appeal to the civil authorities regarding the nuisance committed by the residents of the Sudder Bazaar appears to have been fruitless, it is suggested that the necessary orders for putting a stop to the practice complained of be issued by Government.

Section IV.

Vide remarks under preceding section.

In the Annual Report for 1871 at page F 32, Section V., there is a remark in the Sholapur Cantonment Committee Report to the following effect:—"The water-supply is good, but is in danger of contamination owing to the chief sources of water—the tank close to the railway, and the small well in the Motee Bagh—being removed from camp limits. Formerly when these tanks were under military control, no bathing, or washing clothes, was allowed in them. Now that they are under the control of the civil authorities, both these practices are carried on to a considerable extent, and the water must in time become contaminated."

The above passage appeared in the Sanitary Blue Book for 1872-73, page 192, and it was thought by the Collector of the District, Mr. Bosanquet, to be a reflection upon the civil authority: so much so, that, in his letter No. 1948, dated August 18th, 1874, he has submitted his explanation.

It appears that in August 1871, by a resolution of Government, the cantonment limit of Sholapur was reduced by the Motee Bagh and tank, and other portions (till then a part of the cantonment) being removed from it, and placed under the civil authorities. The transferred ground was surveyed with a view to its limits being defined, and this proceeding seems to have led the military to suppose, that it would be lost to the station as a recreation ground. Under this impression they applied that it might be retained, and ultimately the application was sanctioned. But before this decision of Government was known, the Major-General Commanding the Division arrived at Sholapur on his tour of inspection, and the Collector seems to think, that advantage was taken of his visit to impress upon him the hardship that would be caused were the ordinary recreation ground to be taken away. It was then for the first time discovered, that the sanitary arrangements were defective; but the Collector states that, in taking over the ground, he maintained for its conservancy the arrangements which had been instituted when it was under military control.

To show what was the condition of the ground after it was returned to the military, he quotes a letter, No. 450, dated 27th July 1874, from the Officer Commanding the Regiment which next took charge. The officer in question, Colonel Price says: "On the arrival of my regiment I found the Motee Bagh in a wretched state. The tank was made use of by natives for bathing and washing their clothes. Bullock and other animals had made the ground round the tank and well in a filthy state, and the water had become tainted, was undrinkable and unwholesome."

Speaking of the remark in the Blue Book, the Collector says: "I trust you will do me the justice to mention the circumstance of my denial of the correctness of the statement therein made at your earliest convenience with a view to its being published in a subsequent number of the Blue Book, so that the same publicity may be given to it as was given to the statement complained of."

J. L.

SANITARY REPORT OF SURAT FOR 1874.

SECTION I.—HEALTH OF THE CORPS FORMING THE GARRISON.

1. The average strength of Her Majesty's 26th Regiment N. I. during the past year has been 649.

2. The number of admissions from all causes has been 1,267, showing an increase of 53 on the previous year.

The prevailing diseases in camp and vicinity during the year under consideration have been—ague, boils, rheumatism, syphilis, conjunctivitis, bronchitis, and bowel complaints.

3. The daily average number of sick has been 31·3, while in the preceding year it amounted only to 27·3.

4. The admissions from bowel complaints have been 36.

5. Six fatal cases occurred during the year, viz., two from ague, two from bronchitis, one from pneumonia, and one from dysentery. In the month of April one case of small-pox occurred, the patient was the wife of a sepoy who recovered.

6. Vaccination has been regularly and successfully performed during the year, re-vaccination has also been carefully attended too: all recruits joining the regiments have been re-vaccinated, but in the majority of instances unsuccessfully.

7. No case of cholera occurred.

8. One death occurred among the European community. Lieutenant-Colonel Thomson was attacked with a severe cold at the termination of the Camp of Exercise at Chinchwud, which was shortly followed by an ulcerated condition of the throat and stomach. He went to Bombay on medical certificate on 21st February and died the 5th day after arrival there. The health of the native population has not been so good as during the previous year.

Section II. (*a.*)—Drainage within the Cantonment.

The drainage within the cantonment is good, with the exception of the lines, which are situated on low ground, and consequently during the rains considerable quantities of water occasionally collect. There are no jheels or marshes in the station or its vicinity, but the maidan on the southern and eastern sides of the lines is studded with holes in which the rain-water lies, and this undoubtedly tends to increase all diseases of a malarious nature.

Something might be done to improve the drainage from the well No. 7 near quarter guard. The only existing drain leading from this well is an open one that runs for a considerable distance by the side of the main road, into which this refuse water was at first allowed to escape. But having soon proved a nuisance, it has been the practice of late to collect this water in a pool near the well which is constantly emptied by the sweepers. This arrangement cannot, however, be regarded as a desirable one: some of the water must percolate through the ground and doubtless imparts to the well water a taint which it would be hither without; likewise the exhalations during the hot weather from an exposed surface of foul stagnant water cannot fail to be prejudicial to a certain extent to the health of those living in the immediate vicinity. It is questionable too whether the disposal of the water in the way now done, namely, scattering it about the surface of adjacent ground, does not give rise to malarious exhalations.

Section II. (*b.*)—Water Supply.

Water is obtained from wells in camp in sufficient quantity, but of an inferior quality and brackish; however good water is obtained at some distance outside camp.

Section II. (*c.*)—Accommodation for the Troops.

The accommodation for the troop is sufficient; however the ventilation of the huts is slightly defective.

The hospital affords ample accommodation; for 35 or 36 patients, exclusive of the verandahs: these are large and roomy, and, if necessary, a number of patients can comfortably be located in them.

Section II. (*d.*)—Conservancy.

The regimental latrines are in a good sanitary condition; conservancy is carried out by the tank-cart system; the sewage is conveyed some distance from camp, and deposited in holes which are carefully covered with dry earth. No part of the cantonment land is manured with the station sewage.

The hospital latrine is in a satisfactory condition, and the dry-earth system, which was introduced last year, appears to act well.

Section II. (*e.*)—Cleanliness of the Station.

The general sanitary condition of the camp is good.

Section II. (*f.*)—Rations supplied to the Troops.

No rations are supplied: there has been no unusual deviation in the market price of food.

Suggestions for remedying any of the defects still existing under the several heads (*a, b, c, d, e, f,* and *g*) already given in Section II.

Should it be desired to continue the present system, it is recommended that these cisterns be constructed either case provided with suitable removable covers. But it is suggested as a further improvement upon the present cumbrous system, and as affording at the

same time a means for the better drainage of the lines, that a covered masonry drain be run direct from this well into the river Taptee through the lines, into which drain branch open drains could be run from various parts of the lines and thus remove both the evils now complained of.

REMARKS BY THE QUARTER MASTER GENERAL, BY ORDER OF HIS EXCELLENCY THE COMMANDER-IN-CHIEF.

Section II. (*a*).

Inquiries will be made as to whether the holes on the maidan cannot be filled up and the ground levelled by fatigue parties from the regiment.

Section II. (*a.*)

An estimate of the cost of draining the ground alluded to will be called for.

Section IV.

Vide remarks under Section II. (*a*)

GENERAL ORDERS relating to the Sanitary Condition and Comfort of the Troops.

(Published during 1874.)

G. G. O. No. 503, dated 30th July 1874.

G. G. O. No. 384 of 1874 is cancelled, and the following Scale of Furniture for Rest Barracks and Rest Camps will be supplied by the Barrack Department :—

Names of Articles.	Where required, and for what purpose.	Authorized Proportion.	Remarks.

G. G. C. No. 627, *dated 5th October* 1874.

The following scale of the quantities of disinfectants for the use of European and Native Hospitals, &c., sanctioned by the Government of India, is published for general information :—

*British.**	Carbolic Acid.	MacDougal's Powder.
Battery of Royal Artillery...	30	30
Brigade of do. or Cavalry Regiment.	60	60
Regiment of Infantry	120	120
Convalescent Depôt	120	120
Native.		
Regiment of Infantry	40	40
Wing of do.	20	20
Regiment of Cavalry	30	30
Wing of do.	15	15

**Note.*—A special allowance has been sanctioned for the latrines of the barracks and hospitals at Colaba in the Presidency Town, viz., 3,880 lbs. of MacDougal's disinfecting powder, subject to reduction if a water-sewage system should be established.

A supply at the rate of 1 lb. of this powder per month has also been authorized for each urinal at Aden.

2. These disinfectants are provided only to meet extraordinary demands, such as when the sanitary arrangements may be imperfect, when there is reason to anticipate the appearance of epidemic diseases, and also when these diseases are actually prevalent. Ordinarily, hospital-latrines can, under proper management, be kept perfectly sweet with dry-earth.

G. O. C. No. 157, *dated* 11*th March* 1874.

HOSPITALS.—It being considered advisable to provide bathing accommodation in the Hospitals of Native Troops, His Excellency the Commander-in-Chief is pleased, with the sanction of Government, to notify, that the undermentioned requisite articles per hospital will be provided as follows:—

Baths.

By the Barrack Department.

Baths on wheels	1
Stands, wooden, to hold 8 ghurrahs ...	1
Gratings, wooden, 8 feet by 6 feet ...	1

By the Commissariat Department.

Degchies, brass, 4 gallons, for heating water	1
Tubs ½ casks (one each for Mussulmans and Hindus)	2
Ghurrahs	8

Firewood, hot bath, two seers for each patient per diem, when required.

These articles are to be placed in a small room in each Native Cavalry and Infantry Hospital, which room is to be fitted up and used for bathing purposes.

Commanding Officers are directed to take necessary steps for the provision of the articles named, with the least possible delay, and to endeavour by their personal influence to persuade the patients in hospital to make free and constant use of the means of washing thus afforded to them.

G. O. C. No. 356, *dated 6th June* 1874.

The following General Orders, by His Excellency the Commander-in-Chief in India, are published for information and guidance :—

Adjutant-General's Office, Simla, 7th May 1874.

II. No. 118.

TRANSPORT AND PASSAGE.—In order to guard against cases of infectious disease being conveyed on board Her Majesty's Indian Troop-ships by troops proceeding to the Deolalee Depôt for embarkation at Bombay, it is directed, under instructions from the Government of India, that Medical Officers in charge of Regiments and Detachments are to furnish a certificate in the following form, of the health of such party, and of the general health at the place it is about to leave.

Sanitary.
Military Department, No. 379 dated 11th November 1873.

These certificates should be prepared by the Medical Officer, one at the station of departure immediately before leaving, and one at each cantonment, halting place, or rest camp *en-route*, and the Military Officer in Command is held responsible that the certificates are forwarded direct, and without delay, to the Commandant, Deolalee Depôt.

In the case of small detachments of troops, unaccompanied by Medical Officers, Staff Officers are responsible that these certificates are forwarded—

(1).—From the original station of departure.

(2).—From the station at which rail is taken, when part of the journey has been performed by route march.

(3).—From railway rest camps, at which a halt of more than 72 hours has been made.

(4).—From Jubbulpore.

In the event of a case of infectious disease showing itself in a party, or being found to exist at any station or halting place *en-route*, immediate intimation should be given to the General Officer Commanding the Division or District in which the disease may appear, who will issue orders, should any appear necessary, for the detention of the whole, or a portion of the party, and communicate by telegraph the action taken to the Quartermaster-General at Simla,* and to the Commandant, Deolalee Depôt.

Form of Certificate.

On the occasion of the troops, as per margin, under my medical charge, leaving the station of halting place at I certify from personal knowledge, and after careful enquiry, that there is not, nor has lately been any infectious disease existing or prevalent at that place, and that among the troops so enumerated, or their families moving towards Deolalee, there is not at present a single case of infectious disease, nor any appearance which would lead me to suspect the probability of its development at a later period.

HER MAJESTY'S_____

Strength of Party.

Officers.	Non-commissioned officers and men.
Officers' wives.	Women.
Officers' children.	Children.
Officers' servants.	Camp followers.

The Commandant, Deolalee Depôt.

G. O. C. No. 530, *dated* 29*th September* 1874.

BEDDING.—In reference to G. G. O. No. 572, it is notified that Government has decided that a sufficient reserve of blankets is to be kept in store to admit of the issue in cold weather of one extra blanket to each soldier at each of the stations named in the margin, when such extra issues may be thought to be necessary by the General Officers Commanding and the Principal Medical Officer at those stations.

Blankets.

Ahmedabad.	Nusseerabad.
Deesa.	Kurrachee.
Mhow.	Hyderabad.
Neemuch.	Asseerghur.

G. O. C. No. 592, *dated* 26*th September* 1874.

The following General Orders, by His Excellency the Commander-in-Chief in India, are published for information and guidance :—

Head Quarters, Calcutta, 11*th March* 1867.

IV. No. 232.

MOVEMENT OF TROOPS.—With the sanction of the Government of India, the following regulations, regarding the provision of medical attendants for parties of troops when travelling, are published for general information and guidance.

Medical.

Military Department letter No. 318, dated 7th August 1874, to the Quartermaster-General.

It is to be understood that parties of British Troops under 25 men, moving from one place to another, are not to be accompanied by a Medical Subordinate, unless under very

* Poona.

special circumstances, such as serious illness, or the party being made up of sickly men requiring medical attention during the journey. In every such case, a certificate from the Senior Medical Officer on the spot as to the absolute necessity of a Medical Subordinate being attached to the individual or party moving, must accompany the recommendation to the Military authorities, and the Officer in Command will satisfy himself at the same time that the movement of the party or individual is essential and will admit of no delay.

When the party numbers above 25 and under 50 men, a Medical Subordinate may accompany them, unless the Officer Commanding, in communication with the Senior Medical Officer present, considers it not really necessary.

When the party exceeds 50 in number, a Medical Officer or experienced Subordinate should invariably accompany them; the propriety of nominating a Medical Officer for the charge being left as above to the local Military and Medical authorities.

When the party amounts to 100 men or upwards, a Medical Officer, when available, should, in all cases, be appointed to proceed with them in medical charge.

The above Regulations will be entered as paragraph 36A, Transport Regulations, Part II.

G. O. C. No. 883, *dated* 28*th October* 1874.

The following General Orders, by His Excellency the Commander-in-Chief in India, are published for information and guidance in those stations where the Bengal Act XXII. of 1864 is in force :—

Head Quarters, Lawrencepore, 15*th January* 1873.

I. No. 9.

CANTONMENTS.—With the approval of the Government of India, the following is to be entered as Rule 14A of Chapter III., of the Cantonment Rules, framed under Section XIX. of Act XXII. of 1864 :—

Rations.

Military Department, No. 1165, dated 26th September 1872, to the Quartermaster-General.

"14A.—No person shall, within Cantonment limits, feed milch-cows, buffaloes, goats, or "any animal, the flesh of which is used as food for human beings, on any foul or unwholesome food; nor shall any person, within the said limits, sell the flesh or milk of animals so "fed."

Head Quarters, Simla, 30*th June* 1873.

II. No. 212.

CANTONMENTS.—Under instructions from Government, the following is to be added as paragraph 4A, Chapter II., of the Cantonment Rules, framed under Clauses 4 to 11 of Section XIX. of Act XXII. of 1864 :—

Sanitary.

Military Department, No. 190, dated 7th June 1873, to the Quartermaster-General.

"4A.—On the receipt, however, of credible information of the occurrence of cholera or "other dangerous epidemic disease in a cantonment, or in a place subject to cantonment law, "it shall be lawful for the Cantonment Magistrate or Officer Commanding the Station, to "authorize, in writing, the inspection, by medical and other officers, of the interior of any "house, and of any other premises occupied by any Native within cantonments, or in any "place subject to cantonment law, and within the jurisdiction of such Cantonment Magistrate "or Officer Commanding the Station. Where consent of the occupiers is not given, notice, "in writing, not less than 24 hours before such inspection, shall in all cases be given."
